

Cable Management Systems

## PRODUCT CATALOGUE

# 2023

# Durable Cable Management Systems for Over 40 Years

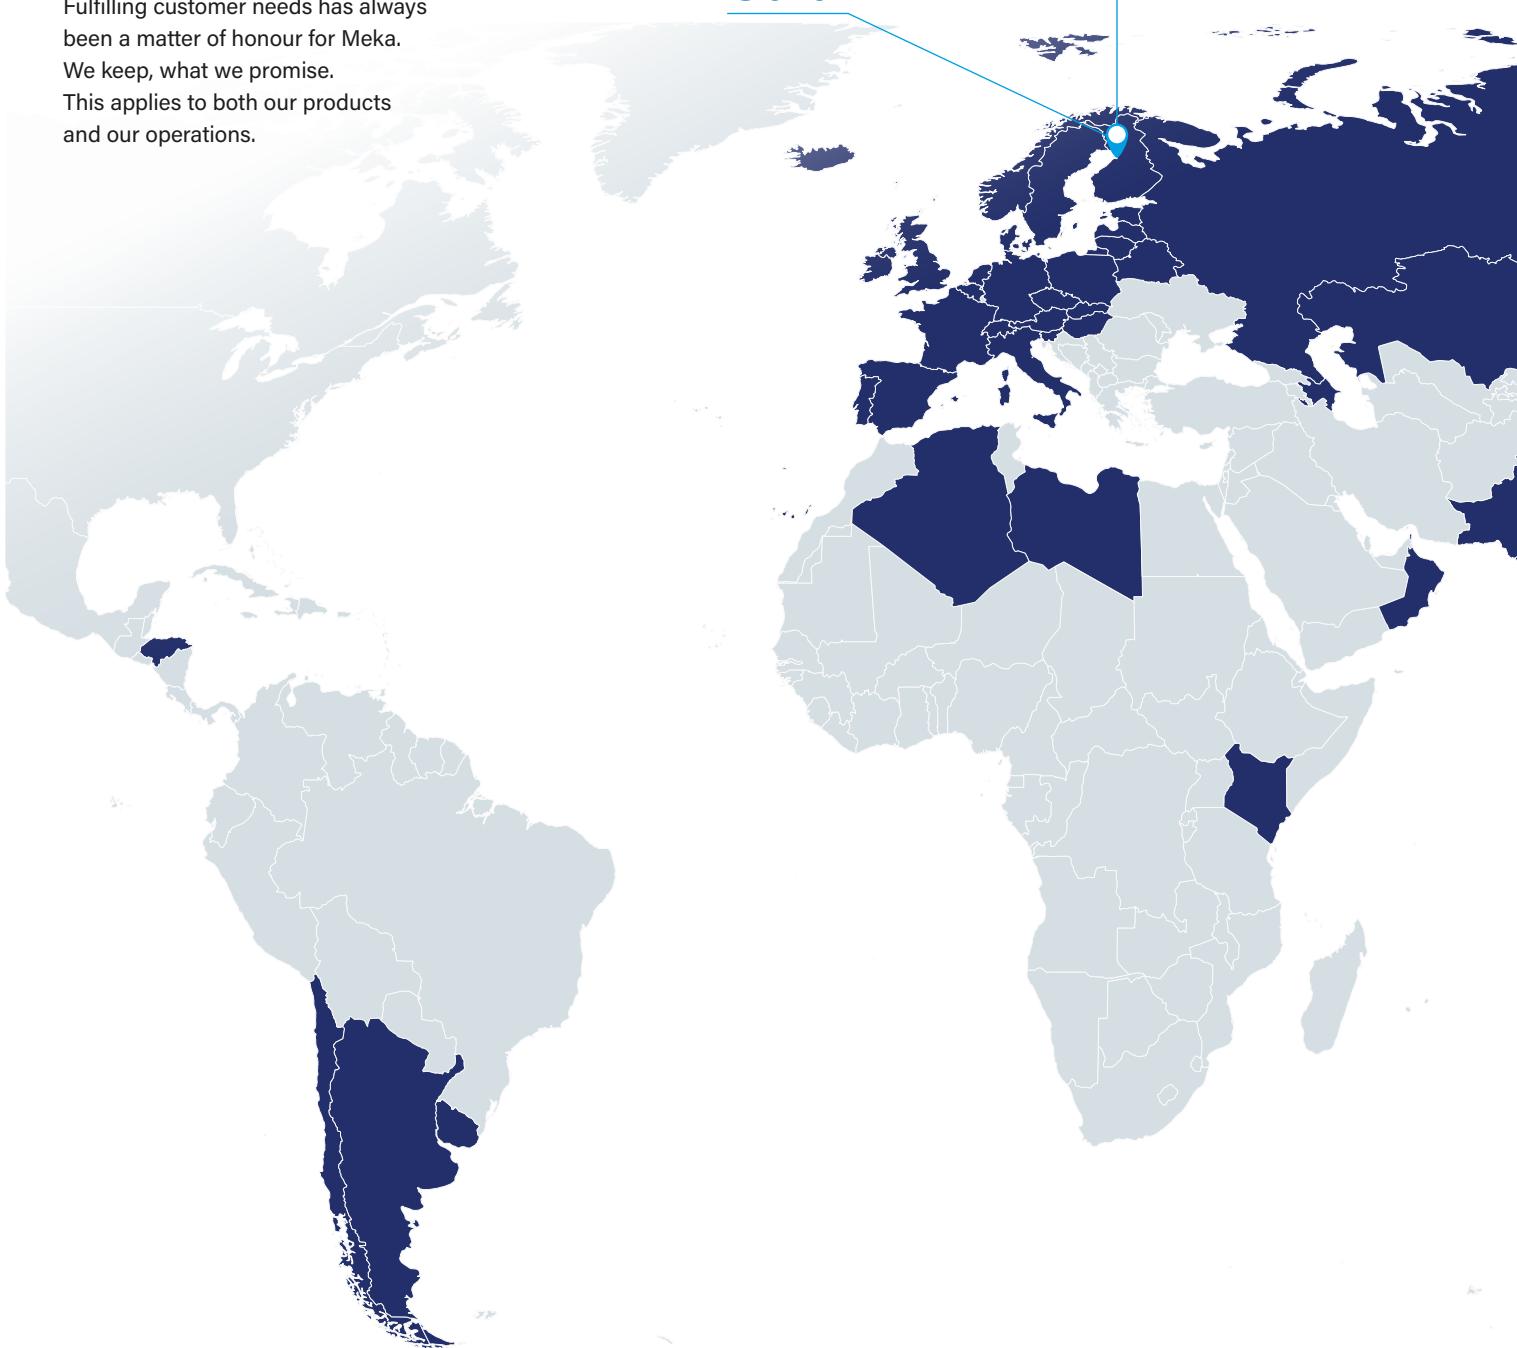

Meka Pro Oy is a Finnish family-owned business, which manufactures long life cycle cable management systems.

The company has nine sales offices and a certified testing laboratory. It directly employs around 150 professionals. Meka now has employees in 6 countries and Meka has already delivered its products to its partners and customers in more than 80 countries.

Fulfilling customer needs has always been a matter of honour for Meka. We keep, what we promise. This applies to both our products and our operations.

# Complete Cable Management Systems

## Cable Ladders

page 1-1

## Cable Trays

page 2-1

## Wire Mesh Trays

page 3-1

### KS20 K

The little giant of cable ladders for commercial building and light industry.

### KS20

Multipurpose cable ladder with a medium load for all atmospheric-corrosivity categories.

### KS60

Cable ladder for heavy loads in building technology solutions and medium loads in industrial solutions.

### KS100

Multipurpose cable ladders with high edges for wide spans and perforated side profile. Atmospheric-corrosivity categories up to C4.

### KS80

Industrial cable ladder for heavy industrial load in atmospheric-corrosivity categories up to CX.

### KSF80

Cable ladder for heavy loads and wide span. Atmospheric-corrosivity categories up to CX.

### KS80 SP2.0

Reinforced industrial cable ladder for the heaviest loads.

### KSE80

Food industry cable ladder.

### KRA

Non-perforated cable tray. Typically used in office and commercial buildings, schools, hospitals and shopping centres.

### KRB

Perforated cable tray. Typically used in office and commercial buildings, schools, hospitals and shopping centres.

### KRC

Low-edge perforated cable tray for low-voltage and optical cables.

### KRV

Flat lighting support rail with perforation line for installation of luminaires, cables and other devices. Typically used in office and commercial buildings, schools, hospitals, shopping centres and parking garages.

### WMT

Easy to modify, enabling optimal space usage. Typically used in office buildings, food, ICT, chemical and renewable energy industries.

With Meka® you can design and implement cable management systems safely, with high quality, cost-effectively and on time.

**Lighting Support Rails** page 4-1

**Cable Trunking** page 5-1

**Socket Poles** page 5-33

#### MEK®

Comprehensive lighting support rail system. Options from wide to narrow light support rails and for all atmospheric-corrosivity categories. Typically used in office and commercial buildings, schools, hospitals, shopping centres and parking garages.

#### AluMEK

Lightweight and rigid aluminum lighting support rail especially for office and commercial buildings, shopping centers and schools.

#### INSTAL®

Aluminum cable trunking.

#### INSTAL SP

Aluminum socket poles and feeder poles.

**BIM-objects**  
of MEKA® cable management systems are available for several data model software.

BIM data models of Meka's Cable Management Systems available for several design software applications.

# Meka Pro Oy

As a partner, Meka Pro provides the most reliable cable management solutions for all its customers' needs. Meka Pro's solutions allow customers to plan and implement their projects in a safe, high-quality and cost-effective manner, and always on schedule.

## Safe and Certified Products

Safe cable management products and solutions are at the core of responsibility. In recent years, Meka Pro invested heavily in scientific testing for its products. In June 2019, Kiwa Inspecta granted Meka Pro Oy's testing equipment, and its results, an IEC 61537 certificate. The product data, load charts and load-bearing data have been updated to meet the latest IEC 61537 standard requirements. Meka Pro has a cable management system with an IEC 61537 certified planning, manufacturing and testing process.

## The Measurement Results Correspond to Reality

Following the IEC 61537 standard's requirements ensures that Meka Pro products and test measurements are true to life. Our test results are replicable, and comparing them to other products that are tested in the same manner is possible. In this way, our customers know exactly what they are getting. Reliable test results make it possible for Meka Pro and its customers to optimise their cable management systems to their exact needs and requirements. In this way, customers can always choose the safest, most cost-effective solution. Optimised solutions when safety is assured also translate to cost savings for our customers, make the products easier to install, and are friendlier to the environment.

## Tested and Verified Fire Safety

Fire safety and fire resistance are another vital part of modern and responsible electrical planning and installation. Meka Pro has tested and continues to test its products and cable management systems fire resistance with the cable installed and connected according to the temperature curve in the EN 1363-1 standard. Meka Pro's manufacturer assurance is based on tests that are carried out, not just on simulated structural integrity formulas. Meka Pro's more than 1200 fire-tested standard products always enable excellent, cost-effective and fire-resistant installation.

## Nordic Strength

Meka Pro is proudly Finnish and has been granted the Key Flag Symbol. We provide employment and opportunities, maintain expertise and product development in Finland, and strive to mainly use Finnish materials. Our entire experienced and professional personnel is at your service to optimize the cable management solutions for your particular and specific needs. By choosing MEKA®, you get safe, secure, and cost-effective planning and implementation of your project.

# Choosing The Right Cable Management System

Planning and selecting your cable management system is a precise process to maximise the system's operational life and safety.

Factors affecting the planning and selection include:

## 1 Atmospheric-Corrosivity Category (C1-CX)

Determining a site's atmospheric-corrosivity category helps to choose the appropriate material and surface treatment for the cable management system. See pages 10 and 11 for the atmospheric-corrosivity category table with explanations.

**Recommended surface treatments and materials:**

### C1-C2

- Electro-galvanised steel (EG)
- Pre-galvanised steel (PG)
- Paint-coated products (M and B)

### C3-C4

- Hot-dip galvanised products (HDG)
- XPG-coated steel (XPG)

### C5-CX

- Acid-proof steel (HST)

## 2 Cable Load (kg/m) and Span (m)

Distance between supports (span) should be defined according to loading and deflection in the middle of span. Stronger product and lower weight allow longer spans but higher load requires shorter spans. The right calculation and selecting a suitable product give significant efficiency in costs.

Detailed load information is available in this product catalogue.

## 3 Fire Resistance Requirements of the System

Fire-resistant installation of MEKA® products is carried out with separate instructions. The instructions can be downloaded at [www.meka.eu](http://www.meka.eu).

Product width, span, maximum load and the installation method are limited for fire-resistant installation.

Approved installation methods are set for each product family separately.

## Examples of Supports and Safe Working Load (SWL)

Product-specific load details, including safe working load (SWL), must be verified from the product's load chart.

### Cable Ladders

- 110 kg/m**  
4-metre span  
• KS100, KSF80 and KS80 SP2.0
- 50 kg/m**  
4-metre span  
• KS80 and KS60

[meka@meka.eu](mailto:meka@meka.eu)

# Load Testing

IEC 61537

Meka Pro measures the safe workload of the cable management systems and corresponding deflection in accordance with the IEC 61537 standard. The safe workload (SWL) is a load [kg/m] that creates a deflection of 1/100 in the span, or if a 1/100 deflection is not achieved, it is the force that creates a permanent deformation divided with the safety factor, which is 1.7.

According to the standard, a safe workload may not cause visible (incl. corrective vision but without magnification) damage or cracking to the cable management systems, including its joints and attaching parts. The cable management systems must return to their original state after the safe workload has been removed.

## Comparable Load Results

Meka Pro's stated load results have been measured with a calibrated testing device. Meka Pro's testing method is certified according to the standard IEC 61537. Meka Pro's load results are comparable with results from other cable management systems measured with the same method.

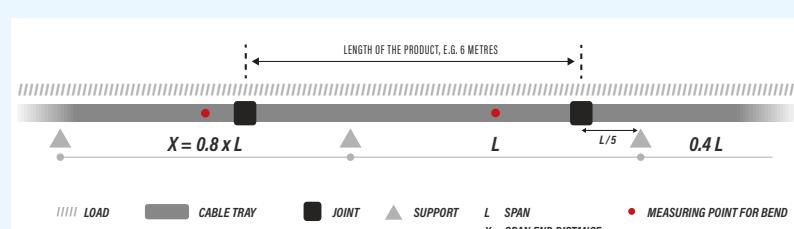

## Ensure the Load Bearing Capacity of the Entire System

Cable management systems also include other parts than cable ladders and trays, which means the weakest point of the system may be some other part than a cable ladder or tray. For example, the allowed load for a support may be smaller than that of the attached cable ladder. The IEC 61537 standard also includes instructions for testing support strength.

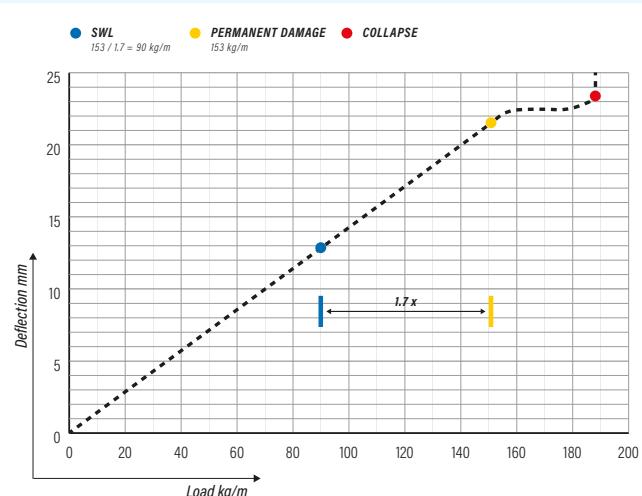

Flexibility in the system may also limit the load on the cable management system, despite the longer parts and supports being able to support a greater load. The IEC 61537 standard only allows a deflection that is 1/100 of the span. This consideration is present in Meka Pro's load diagrams.

Products tested according to the standard allow the customer to compare systems with each other. The picture above shows the cable ladder being tested for the safe workload with the calibrated test device in Meka Pro's testing laboratory.

In Meka Pro's tests, in accordance with test type 3, the joint is at 1/5 of the span from the support, and the span end distance is 4/5 of the span length.

According to the standard, a safe workload may not cause visible (incl. corrective vision but without magnification) damage or cracking to the cable management system.

# Earthing and Potential Equalisation

IEC 61537

Primary potential equalisation is required for each building. The purpose of primary potential equalisation is to prevent dangerous voltage differences between conducting components that could be handled simultaneously. Potential equalisation is a process wherein components that are exposed to voltage or are otherwise conductive are connected to the same potential, which eliminates the difference in potential.

Generally, the building's metal pipelines (HVAC), structural metal parts, and primary structural concrete reinforcements are connected to the equalisation system in the applicable parts. Metal cable management systems may also be considered structures that should be included in the potential equalisation system.

## Protective Earthing and Potential Equalisation for Cable Trunkings

Aluminium cable trunking systems do not generally require protective earthing or a connection to the potential equalisation conductor. In some customer-specific cases, protective earthing or potential equalisation

Please pay attention to the industry installations, the grounding of the entire cable management system and its reliability.

may be required in aluminium cable trunking, for example to avoid electrical interference

In some customer-specific cases, protective earthing or potential equalisation may be required in aluminium cable trunking, for example to avoid electrical interference.

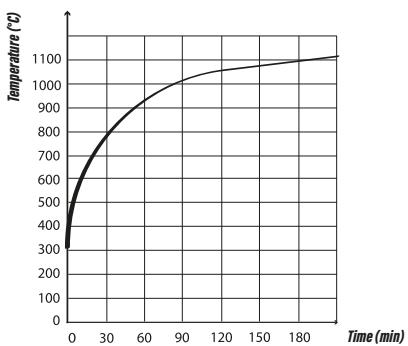

Product group specific potential equalisation results are found at the beginning of each product section.

# Fire Resistance

EN 1363-1

Meka Pro regularly tests the fire resistance of its products to ensure high-quality and safe cable management systems. The products are tested extensively and using several different installation methods in independent testing laboratories.

Meka Pro cable management systems are always tested together with the cables connected to the circuit at a temperature in accordance with the standard EN 1363-1.

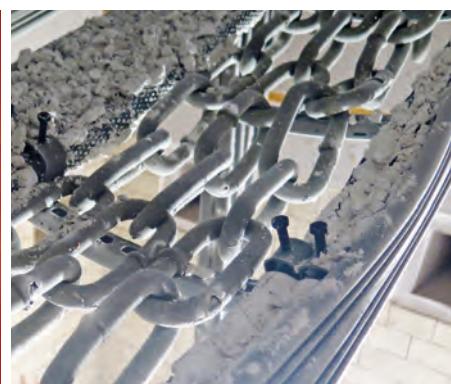

Test environment temperature curve according to EN 1363-1.

Detailed instructions on fire-resistant installation are available on Meka Pro Oy's website

[www.meka.eu](http://www.meka.eu)

# Surface Treatment Options

The choice of surface treatment for the products should be made based on the conditions on the site. MEKA® product names include a code to indicate their surface treatment, e.g. KS20-200 L=6000 PG.

Plastic	M 	B 	AD 	AL 
White or colored plastic	Paint-coated product Colour white RAL 9010	Paint-coated product Colour black RAL 9005	Anodised aluminium Standard colour natural grey EN000	Aluminium

Plastic products are made of through-dyed plastic granules, by either injection moulding or extrusion.  Plastic products are not surface treated after manufacture.	Paint-coated products may be e.g. <ul style="list-style-type: none"><li>▪ Pre-galvanised and painted steel products</li><li>▪ Steel or aluminium products that have been painted after manufacture</li></ul>	Paint-coated products may be e.g. <ul style="list-style-type: none"><li>▪ Pre-galvanised and painted steel products</li><li>▪ Steel or aluminium products that have been painted after manufacture</li></ul>	Anodised aluminium products are made of pre-anodised aluminium preform sheets, or the anodisation is applied to the final product. A protective oxide layers has been generated on the surface of anodised aluminium with anodising solution and an electrical current. This results in a hard surface that is resistant to wear.	Aluminium products are made of aluminium alloy with an extrusion machine. The products are not surface-treated separately after being manufactured.
<b>EG</b> 	<b>PG</b> 	<b>HDG</b> 	<b>XPG®</b> 	<b>HST</b> 
Steel, galvanised after manufacture  <b>Atmospheric-Corrosivity Category</b> C1-C2 <b>Standard</b> EN ISO 2081  Zinc layer strength on average 5-8µm	Pre-galvanised steel  <b>Atmospheric-Corrosivity Category</b> C1-C2 <b>Standard</b> EN 10346  Zinc layer strength on average 20µm	Steel that has been dipped in molten zinc after manufacture (dip-galvanised)  <b>Atmospheric-Corrosivity Category</b> C1-C4 <b>Standard</b> EN ISO 1461  Zinc layer strength on average 45-55µm	Hot-dip galvanized, specially coated steel  <b>Atmospheric-Corrosivity Category</b> C1-C4 <b>Standard</b> EN 10346	Acid-proof stainless steel AISI 316L  <b>Atmospheric-Corrosivity Category</b> C1-CX <b>Standard</b> EN 10088
Electro-galvanised products are made of non-surface-treated steel. The final product, such as a whole wire mesh tray or an attaching part thereof is pre-treated and galvanised in an electrolytic basin. The zinc layer covers all surfaces of the product, including cutting surfaces and welding seams.	Pre-galvanised steel products are made of steel that is already galvanised. These products may also be called pre-galvanised, continuously galvanised or Sendzimir-galvanised.	Hot-dip galvanised products are made of non-surface treated steel. The final product, such as a whole cable tray or an attaching part thereof is pre-treated and dipped in molten zinc. These products may also be called dip-galvanised. The zinc layer covers all surfaces of the product, including cutting surfaces and welding seams.	XPG® products are made of zinc-based special alloy coated steel. The special mixture forms a thin and tight film on the coating, which improves corrosion protection. Corrosion protection is based on cathodic and mechanical protection.	Acid-proof stainless steel products (HST) are made of acid-proof steel. Welded products are pickled after manufacture.

# Installation Instructions

The information in this publication is intended to present and illustrate generally acceptable installation methods for MEKA® cable management systems.

These guidelines and information do not intend to cover all details or variations in each cable support system nor provide for every possible installation contingency.

This publication does neither intend to replace the responsibility of the contractor and installer to acquire knowledge of and apply the valid laws, rules, regulations, and standards on electrical and cable support system installations in each individual project and site.

The installation method shall always be finally approved by the construction site supervisor and relevant authorities.

## Product Responsibility

### Take note of the following regarding cable management installation:

1. Cable trays and ladders are intended to support cables only.
2. Cable trays or cable ladders may not be used as ladders or walkways. It is forbidden to attach safety harnesses or similar equipment to cable support products.
3. In installing cable management systems, consider the load-bearing specification of each component as well as the strength of the fastening and surface materials. Do not exceed the manufacturer-specified maximum load.
4. Plastic components are not intended to be used as a load-bearing element if not otherwise stated in installation instructions.
5. Products may only be installed by a qualified professional who knows safe and correct electrical contracting and construction practices, electrical

equipment, and safety issues in electrical systems. The installation must always comply with standards, as well as local laws, rules and regulations.

6. Follow the manufacturer's instructions on installation and usage.
7. Impact wrenches or other impact tools shall not be used for tightening bolts to prevent overtightening and to ensure the products' corrosion resistance.
8. Products must be stored and handled appropriately.
9. Use only matching products of the same system with MEKA® products.
10. Make sure that mounting accessories and mounting surface meet the required strength requirements.
11. Safe working load (SWL) is the largest allowed load for the product in question. Verify the maximum allowed loads of each product in their product datasheets.
12. Products must not be used in the North American region.

The manufacturer assumes no liability for wrong product choices or for direct or indirect damage resulting from incorrect use.

## General Installation instructions

Cable management systems shall be installed in a manner that the load does not exceed the manufacturer's specified maximum load, or that the deflection of each cable ladder/tray span does not exceed 1/100th of the span. In practice, a deflection of 1/100 means that with, for example, a three-meter-span, the deflection may not exceed 30 mm. In calculating the deflection, include roughly 50% of the existing load as additional allowance.

Sufficient gap for heat expansion shall be left between cable ladders and cable trays as well as at their ends. Steel's coefficient for heat expansion is  $0.000012\text{m}/^\circ\text{C}$ . The following formula can be used to calculate the heat expansion: change in temperature  $\times 0.000012 \times$  length. If, for instance, the length of your tray system is 100 m and the temperature changed by  $40^\circ\text{C}$ , the change in length is  $40 \times 0.000012 \times 100 = 0.048\text{ m}$ , i.e. 48 mm.

The load-bearing capacity of the brackets as well as the strength of the mounting accessories and surface materials in cable ladder and cable tray installations shall be considered.

In installation sites where vertical cable ladders are prone to mechanical damage, the ladders shall be protected with a cover of 1.5 m in height.

## Feedthroughs

Regarding feedthroughs in fire protection walls, cut the cable tray or cable ladder from next to the walls. At the edge of flammable areas, feedthroughs must have equivalent fire resistance to the feed-through structure.

## Installation Accessories

Installation accessories that are placed on cable ladders or cable trays, such as junction boxes, must be securely attached in a manner that the accessories are not located in the area intended for cables. MEKA® mounting plates are recommended to be used when needed.

## Use of High-Current Cable Systems

High-current cables can be installed to KS80 and KSF80 cable ladders when using cable clamps intended for that purpose.

# Approvals and Tests

## CE Mark

All MEKA® products and parts have the CE mark. The CE mark is the manufacturer's guarantee that the product meets the requirements of the applicable directives.

MEKA® products and parts require The EU low voltage directive (2014/35/EU, LVD). The directive is intended to guarantee that electrical devices that are sold on EU markets do not, when used, installed and maintained correctly, cause a danger to people, livestock or property.

The directive applies to all hazards that arise from the use of electrical devices. The directive lays forth all the core safety targets that electrical devices must meet in order to be made available in the EU market. According to EU uniformisation regulations, the directive also ensures the free movement of electrical devices that meet the requirements.

## FI Mark

The FI safety mark may be used for products with a valid SGS Fimko or Kiwa Inspecta-granted FI certificate. To be granted the FI mark, the product must be type-tested at a qualified test laboratory, and the FI mark is only granted to products that pass rigorous tests and inspections. FI marked products are also controlled at the manufacturing and sales locations, and the products are listed in the register of FI certified products. The FI safety mark is well known in all EEA countries and it signifies that the product meets the requirements of the relevant safety standards and directives. It also provides a basis for certification in various other countries.

## Key Flag Symbol

The Key Flag Symbol is the sign of Finnish work. It means that Meka products and/or product groups are made in Finland and/or the product or product group is at least 50 percent Finnish regarding its cost price. The Key Flag Symbol is the property of the Association for Finnish Work.

## EAC Certification

This customs alliance is a joint body of Russia, Belarus and Kazakhstan. Their certificate follows the customs alliance and/or Russian, Belarussian or Kazakhstani certification guidelines. The customs alliance certificate is labelled EAC Eurasian Conformity. Previously used GOST-R certificates have been superseded by the customs alliance's EAC certificates.

## Meka's General Terms of Delivery

Terms of delivery are determined on an offer- and contract-specific basis with the customer. In Finland, we primarily use the CPT or DAP supply article. In exports, we follow an INCOTERMS 2020 compliant supply article that is agreed on separately for each shipment. The goods are delivered within the agreed shipment time. The goods become the buyer's property once the sale price has been paid in full.

## Standards

**IEC 61537**, Cable management - Cable tray systems and cable ladder systems sets the mechanical testing procedure for cable trays, brackets and other parts. This standard also sets the conductivity test process. IEC 61537 is a standard for cable tray systems that is harmonised on the EU level.

**EN 50085-1**, Cable trunking systems and cable ducting systems for electrical installations. This standard contains the structural requirements and testing processes for cable trunking systems. Harmonised product standard.

**EN 60529**, "Degrees of protection provided by enclosures (IP Code)". This standard defines the enclosure ratings and labels as well as presents the requirements and necessary tests. Harmonised product standard.

## Recyclability

Meka products are made of recyclable materials and the products are 100% recyclable after the end of their lifespan.

### Instal® cable trunking products have also the following safety certificates:

- S (Sweden)
- N (Norway)
- Demko (Denmark)

# How to Read Charts and Diagrams

## Product Charts

1. Individual code of the item.
2. Stock product: this label means that the item is more readily available. Products that are marked as stock products are directly available at Meka's warehouse in Finland.
3. Product weight in kilograms
4. Product dimensions in millimetres. The matching ruler to the letter is printed on the product's dimension drawing.
5. Product sales package. For long products, we state the number of pieces and the total length in metres. For mounting parts, we state the number of pieces in the package.
6. Short code of product surface treatment or material.
7. Description of the surface treatment or material.
8. Atmospheric-corrosivity categories that apply to the product.

Up-to-date and comprehensive product information, test results and installation examples are available on our website.

[www.meka.eu](http://www.meka.eu)

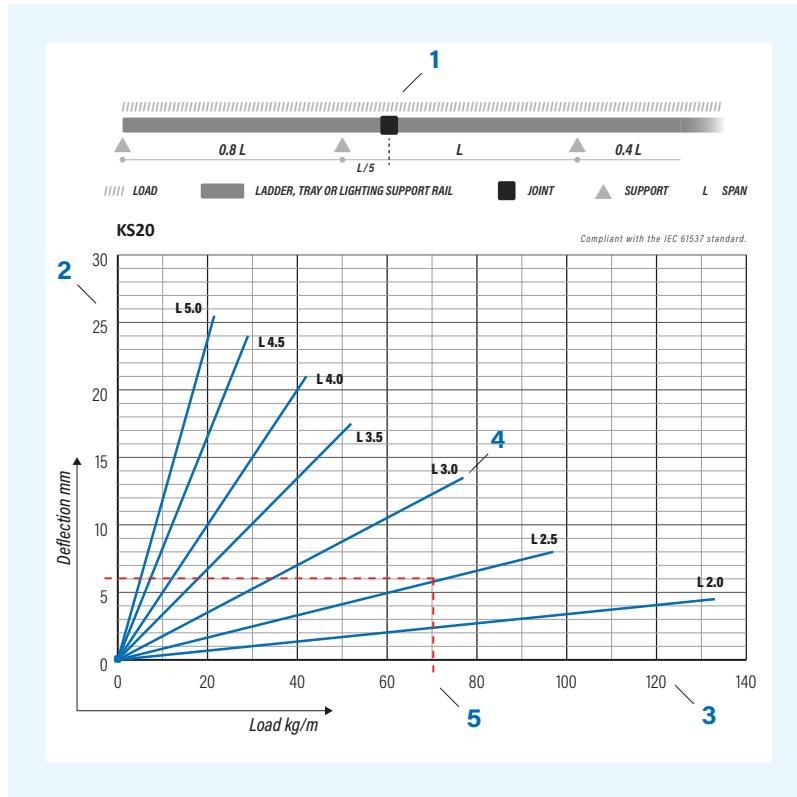

CODE	PRODUCT <small>x = stock product</small>	WGT. kg / pc	A mm	S mm	L mm	PACKAGE

## Load Diagrams

1. Testing method compliant with IEC 61537 type 3.
2. Product deflection in millimetres.
3. Product load in kilograms per metre.
4. Span used in testing, in metres.
5. With a load of 70 kilograms per metre and a span is 2.5 metres, the product will deflect by 6 millimetres.

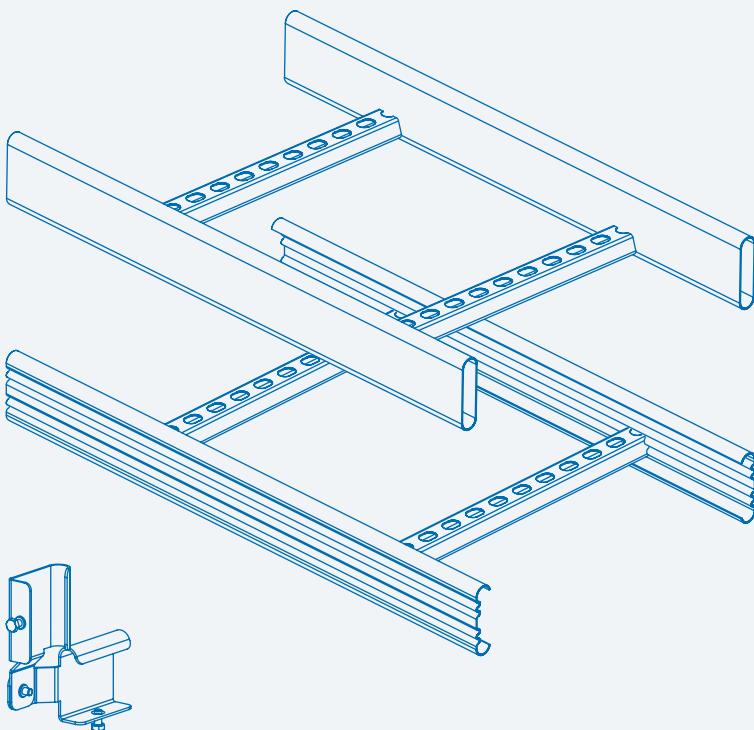

The safe workload (SWL) has been tested with a calibrated testing device. This testing method is certified according to the standard IEC 61537. The joint is at a 1/5 distance of the support and the deflection was measured at the midway point between the supports.

SWL is a load that creates a deflection of 1/100 in the span, or if a 1/100 deflection is not achieved, it is the force that creates a permanent deformation divided with the safety factor, which is 1.7.

Cable Management Systems

**2023**  
**Cable Ladders**

Products available up to fire rating E90.

All cable ladders are completely recyclable.

Cable ladders for all atmospheric-corrosivity categories C1-CX.

Optimal cable management solutions for every location.

## Cable ladders

### KS20 K PG

#### Open side profile

47 kg/m (3-metre span)

The little giant of cable ladders! Cable ladder for residential building solutions, both indoor and outdoor use, when a atmospheric-corrosivity category C1 or C2 is sufficient. The open C-profile is made of pre-galvanised steel plate. Compatible with KS20 and KS60 systems.

### KS20 PG

#### Open side profile

76 kg/m (3-metre span)

Multipurpose cable ladder. Cable ladder for residential building solutions with a moderate load, both indoor and outdoor use, when atmospheric-corrosivity category C1 or C2 is sufficient. The open C-profile is made of pre-galvanised steel plate. Compatible with KS20 K and KS60 systems.

### KS20 HDG

#### Open side profile

76 kg/m (3-metre span)

Multipurpose cable ladder. Cable ladder for residential building and industrial solutions with a moderate load, both indoor and outdoor use, when atmospheric-corrosivity category C3 or C4 is required. The open C-profile is hot-dip galvanised after manufacture. The thickness of the galvanising is 55 µm on average. Compatible with KS20 K and KS60 systems.

### HST KS20

#### Open side profile

76 kg/m (3-metre span)

Multipurpose cable ladder made of acid-proof stainless steel (AISI 316L). Cable ladder for industrial solutions with a moderate load, when atmospheric-corrosivity category C5 or CX is required.

### KS60 PG

#### Open side profile

114 kg/m (3-metre span)

Cable ladder for heavy loads in residential building solutions and moderate loads in industrial solutions, both indoor and outdoor use, when atmospheric-corrosivity category C1 or C2 is sufficient. Lighter option for KS80 cable ladders. The open C-profile is made of pre-galvanised steel plate. Compatible with KS20 K and KS60 systems.

### KS60 HDG

#### Open side profile

114 kg/m (3-metre span)

Cable ladder for moderate loads in industrial solutions, when atmospheric-corrosivity category C1-C4 is required. Lighter option for KS80 cable ladders. The open C-profile is hot-dip galvanised after manufacture. The thickness of the galvanising is 55 µm on average. Compatible with KS20 and KS60 systems.

## KS80 HDG

### Tube side profile

109 kg/m (3-metre span)

Industrial cable ladder. Cable ladder for heavy industrial loads in atmospheric-corrosivity category C1-C4. Tube profile can withstand large industrial loads and meets lateral stiffness requirements. The cable ladder is hot-dip galvanised after manufacture. The thickness of the galvanising is 55 µm on average.

## HST KS80

### Tube side profile

109 kg/m (3-metre span)

Industrial cable ladder made of acid-proof stainless steel (AISI 316L) for extremely demanding atmospheres. The cable ladder can withstand significant industrial loads, meets lateral stiffness requirements and is suited for atmospheric-corrosivity category C1-CX.

## KSE80 HDG

### Tube side profile, rounded cleat

109 kg/m (3-metre span)

Hot-dip galvanised cable ladder for food industry applications. Cable ladder that is hot-dip galvanised after manufacture, with plugged ends as well as tube and cleat profiles that are optimised for the food industry. The thickness of the galvanising is 55 µm on average.

## HST KSE80

### Tube side profile, rounded cleat

109 kg/m (3-metre span)

Food industry cable ladder made of acid-proof stainless steel (AISI 316L). The cable ladder has pluggable ends and an optimised tube and cleat profile to meet the food industry's hygiene requirements.

## KSF80 HDG

### Reinforced tube side profile, wide spans

155 kg/m (3-metre span)

Cable ladder for long distance between supports. Tube profile that has been reinforced for heavy loads and long distance between supports (up to 9m), for use in atmospheric-corrosivity category C1-C4. The cable ladder is hot-dip galvanised after manufacture. The thickness of the galvanising is 55 µm on average.

## HST KSF80

### Reinforced tube side profile, wide spans

155 kg/m (3-metre span)

Cable ladder for long distance between supports. Tube profile that has been reinforced for heavy loads and long distance between supports (up to 9m), for use in atmospheric-corrosivity category C1-CX. The cable ladder is made of acid-proof stainless steel (AISI 316L).

## KS80 SP2.0 HDG

### Reinforced tube side profile

182 kg/m (3-metre span)

Reinforced industrial cable ladder for heavy loads in atmospheric-corrosivity category C1-C4. Reinforced tube profile that can withstand large industrial loads and meets stiffness requirements. The cable ladder is hot-dip galvanised after manufacture. The thickness of the galvanising is 55 µm on average.

## KS100 PG

### Open side profile

183 kg/m (3-metre span)

High sided cable ladder for wide spans. The cable ladder is suited for atmospheric-corrosivity category C1-C2. The cable ladder is hot-dip galvanised after manufacture. Higher cable space hides even thicker cables from view and damage. Perforated side profile enables the attachment of fixtures to the side of the cable ladder.

## KS100 HDG

### Open side profile

183 kg/m (3-metre span)

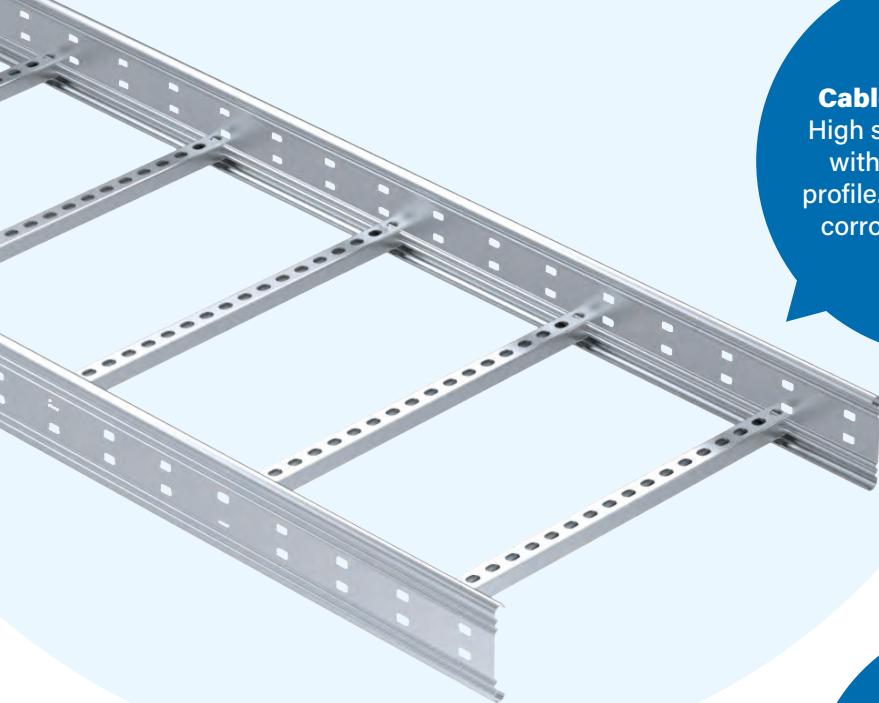

High sided cable ladder for wide spans. The cable ladder is suited for atmospheric-corrosivity category C1-C4. The cable ladder is hot-dip galvanised after manufacture. The thickness of the galvanising is 55 µm on average. Higher cable space hides even thicker cables from view and damage. Perforated side profile enables the attachment of fixtures to the side of the cable ladder.

All cable ladders can be installed both vertically and horizontally.

All cable ladders are available 200–600 mm wide.

Load-carrying capacity of cable ladders have been tested in compliance with IEC 61537 test type 3.

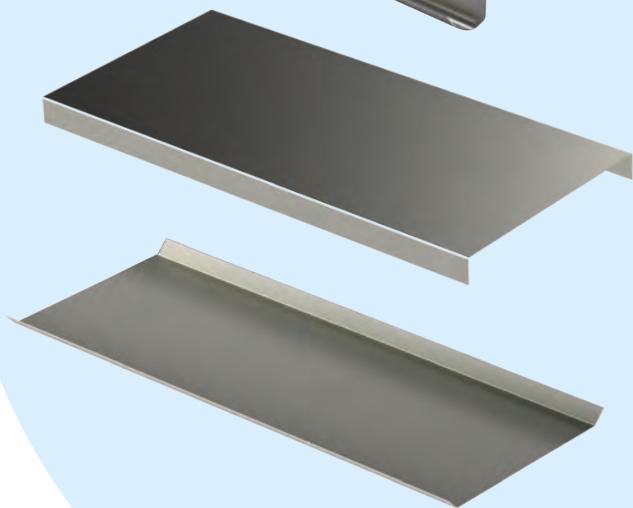

**Available!**  
**Cable ladder KS100.**  
High sided cable ladder  
with perforated side  
profile. For atmospheric-  
corrosivity categories  
C1-C4.

**New!**  
For finishing installations  
and safety of use.  
**End plugs** for  
mounting rails  
ASR / ASR-P / FP and  
ceiling supports  
TP1 / TP2 / TP2-P.

**New!**  
**XPG®** coated covers  
and accessories of  
atmospheric-corrosivity  
categories C1-C4.

**New!**  
**Cable clamp CCA**  
made of acid-proof  
steel for extreme  
conditions.

# Fire-resistant cable ladders

Fire rating E90

PRODUCT	SPAN LENGTH max (m)	WIDTH max (mm)	LOADING max (kg/m)
KSF80	1,5	600	20
KS80 SP2.0	1,5	600	20
KS80	1,5	600	20
KSE80	1,5	600	20

All lengths, and all material and surface treatment options up to a 600 mm width.

PRODUCT	SPAN LENGTH max (m)	WIDTH max (mm)	LOADING max (kg/m)
KS60	1,5	600	20
KS20	1,5	600	15
KS20 K	1,5	600	15

All lengths, and all material and surface treatment options up to a 600 mm width.

TYPE	PRODUCTS	
Bends	KS90, KSF90	All products and all materials and surface treatment options. Maximum allowed width 600 mm. Corner pieces must be supported no further than 300 mm from both joints, or in the middle of corner, if distance to the joint is less than 300 mm. On demand, corner pieces must be supported so that the span length of the corner piece does not exceed the allowed span length of the concerned cable ladder when measured the length in the median line of the arc.
Bottom covers	POL, PPU	All products and all material and surface treatment options. Maximum allowed width 600 mm.
Brackets	KK, KK-MK, KKF, PSF	All products and all material and surface treatment options.
Branching sheet	AG	All products and all material and surface treatment options.
Cable clamps	CCA	All material and surface treatment options. Fire-safe installation of a vertical ladder requires that cables be attached with cable clamps at no more than 300 mm intervals.
Ceiling brackets	PF, RTF-10, RTF-16, RTF-S, RTF-Z	All products and all material and surface treatment options. Fastening equipment that is rated for fire safety must be used with ceiling brackets.
Ceiling supports	TP1, TP2, TP2-L, TP2-P	All products and all material and surface treatment options. Fastening equipment that is rated for fire safety must be used with ceiling supports.
Covers	SK, PSK, KRL-KS	All products and all material and surface treatment options until width 600 mm.
End bracket	ÄF	All material and surface treatment options.
Gate supports	MK, TPK, PRT	All products and all material and surface treatment options. Gate supports must be attached to the ceiling with two threaded rods. TPK may also be attached to the ceiling with two TP1 ceiling supports.
Intermediate supports	HK13	All material and surface treatment options. Maximum allowed width is 600 mm. Ceiling support TP1 is required when using the intermediate support HK13.
Joints	SSR, SSU	All products and all material and surface treatment options.
Mounting rails	AS, AS-WALL, FP, PS	All products and all material and surface treatment options. Mounting rails must be attached to the wall. Fastening equipment that is rated for fire safety must be used with mounting rails.
Nuts	MU 6, MU 10, MU 16	All products and all material and surface treatment options. MU 6 -nut is allowed only in tip attachments, not in supports.
Screw sets	RS1, RS2, RS3, RS4, RS KSF, RS SSU, RS VK2, RS MEK J 10	All products and all material and surface treatment options.
Separation plates	AP, SR	All products and all material and surface treatment options.
Side profile support	KSF-VT	All material and surface treatment options. Side profile support KSF-VT must be used in fire-resistant systems, when wall or intermediate supports are placed under KSF80 ladders' lower tubes.
Sliding nut	SMT	All products and all material and surface treatment options.
T and X-pieces	KST, KSX, VF	All products and all material and surface treatment options. T and X-pieces must be supported no further than 300 mm from both joints, or in the middle of corner, if distance to the joint is less than 300 mm. On demand, T and X-pieces must be supported so that the span length of the product does not exceed the allowed span length of the concerned cable ladder when measured the length in the median line of the arc.
Threaded rods	GT-6, GT-10, GT-16	All products and all material and surface treatment options. GT-6 threaded rod is allowed only in tip attachments, not in supports. Fire-rated fastening equipment is required when using threaded rods.
Wall brackets	VK2	All products and all material and surface treatment options. In addition of wall support VK2 can be used to hold up corner, T and X-piece. Wall bracket VK2 is not allowed to be used as a ceiling support.
Wall supports	VK, VKF, VKZ, VKZ-N	All products and all material and surface treatment options. VKZ and VKZ-N must always be supported with a threaded rod from the support's tip to the ceiling. VK and VKF may be attached to the wall directly with fire-rated fastening equipment, without the need for the tip to be attached. When a support is attached from the tip, the support must be wider than the cable ladder. Maximum allowed widths without tip-support are: VKF 600 mm and VK 500 mm. With a tip-support 100 mm wider wall support is accepted.

### Installation of a corner E90

Corner piece must be supported no further than 300 mm from both joints, or in the middle of corner, if distance to the joint is less than 300 mm. On demand, corner piece must be supported so that the span length of the corner piece does not exceed the allowed span length of the concerned cable ladder when measured the length in the median line of the arc.

Corner piece can be supported by fire rated brackets and supports, or by using wall bracket VK2 in both side of the product. One VK2 is not enough.

### T-piece installation E90

KST and KSX must be supported no further than 300 mm from both joints, or in the middle of corner, if distance to the joint is less than 300 mm. On demand, KST and KSX must be supported so that the span length of the product does not exceed the allowed span length of the concerned cable ladder when measured the length in the median line of the arc.

T and X pieces can be supported by fire rated brackets and supports, or by using wall bracket VK2 in both side of the product. One VK2 is not enough.

### Installation of a vertical ladder E90

In an E60 compliant vertical ladder installation, the cable ladder is attached to the wall with wall bracket VK2. In an E90 compliant vertical ladder installation, the cable ladder is attached to the wall with wall bracket VK2 and to the floor with end brackets AF.

### Tip attachment E90

Tip attachment is required to achieve the fire rating, if wall support VK or VKF is attached with a sliding nut SMT to a mounting rail AS. In this case, a support that is wider than the cable ladder is required in order to attach the M6 threaded rod to the outermost hole.

The tip attachment is not required to achieve the fire rating, if wall support VK or VKF are attached together through a ceiling support TP2 with a bolt.

### Gate support E60/E90

Gate supports TPK and PRT are E90 compliant, and gate support MK is E60 compliant. In an E60 compliant gate support installation, gate support MK must be attached to the ceiling with two threaded rods. Gate support MK is attached to the cable ladder with bracket KK-MK.

### Intermediate support E90

In an E90 compliant intermediate support installation, ceiling support TP1 is attached to intermediate support HK13 with screw set RS3. The cable ladder is attached to intermediate support HK13 with bracket KK.

The wall brackets are installed so, that they are attached to the cable ladder cleat underneath. Cables must be attached to the transverse cleat with cable clamp CCA at not less than 300 mm intervals. Cable clamps must be protected from fire at not less than 3.5 metre intervals, unless otherwise instructed by the authorities. The protection of the cable clamps can be done, for example, within the building's firestop or by building a firestop around the cable ladder, cables and clamps from firestop material. The firestop must be made in accordance with a national standards, national regulations or industry-specific standards.

Vertical installation:

Maximum allowed support interval (VK2 and VK3): 1.5m  
 Maximum allowed load per metre (KS20 K): 10kg  
 Maximum allowed load per metre (KS20): 15kg  
 Maximum allowed load per metre (KS60): 17.5kg  
 Maximum allowed load per metre (KS80): 20kg  
 Maximum allowed ladder width (KS20 K, KS20, KS60 and KS80): 600 mm

# Cable ladder KS20 K

PG

Multipurpose cable ladders KS20 K are suitable for lower and medium loading capacities. Open C-shaped side profiles enable using of interior supports and -joints that leaves a better look when cable ladders are installed. Mounting of KS20 K cable ladders is handy and pleasant because of their extra light weight and rounded side profiles.

Suitable joints for KS20 K cable ladders are SSC and SSR. For mounting can be used intermediate ceiling supports MK and HK13, gate supports PRT and wall supports VKZ, VKI and VK. Fastening ladders to supports can be made with brackets KK or KK-MK. For making simpler corners and bends are commonly used adjustable joints NL and T-brackets VF.

# Cable ladder KS60

PG HDG

**MEKA**®

Multipurpose cable ladders KS60 are suitable for high loading capacities. Open C-shaped side profiles enable using of interior supports that leaves a better look when cable ladders are installed. Mounting of KS60 cable ladders is handy and pleasant because of their light weight and rounded side profiles.

Suitable joints for KS60 cable ladders is SSR. For mounting can be used intermediate ceiling supports MK and HK13, gate supports PRT and wall supports VKZ, VKI and VK. Fastening ladders to supports can be made with brackets KK or KK-MK. For making simpler corners and bends are commonly used adjustable joints NL and T-brackets VF.

# Cable ladder KS100

PG HDG

**MEKA®**

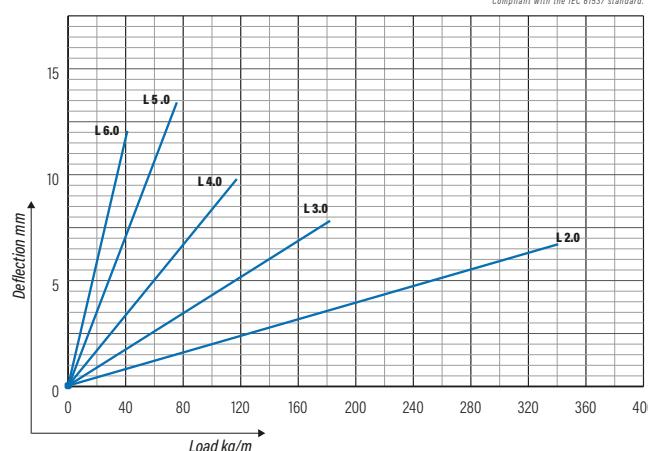

Multipurpose cable ladders KS100 with high edges are suitable for high loading capacities and wide spans. Higher cable space hides even thicker cables from view and damage. Perforated side profiles enable mounting of fixtures to sides of cable ladders. Cable ladders KS100 are used in industry and energy plants, as well as in large halls and warehouses.

Suitable joints for KS100 cable ladders are KS100 J. For mounting can be used intermediate ceiling supports HK13, gate supports PRT and TPK, wall supports VK and VKF. Fastening ladders to supports can be made with brackets KK100. For making simpler corners and bends are commonly used joints KS100 J, brackets KS100 VEF and KS100 UB.

KS100

Compliant with the IEC 61537 standard.

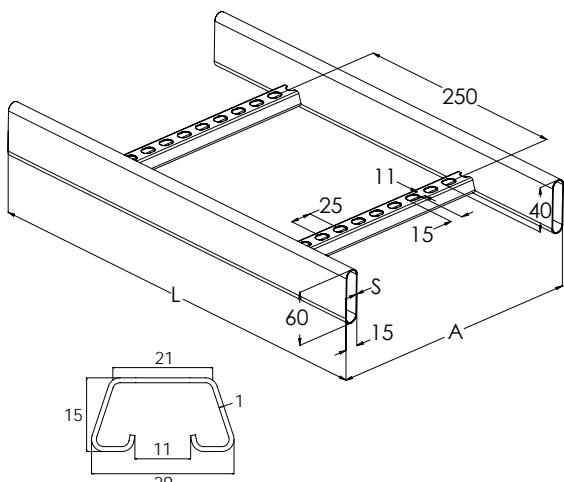

# Cable ladder KS80

HDG HST

Industrial cable ladders KS80 are suitable for high loading capacities and wider spans. Tube side profiles protect ladders from dust, dirt and humidity that is required in i.e. pulp and paper-, wood- and food industry as well as in outdoor installations.

Suitable joints for KS80 cable ladders are SSR and SSU. For mounting can be used intermediate ceiling supports HK13, gate supports PRT and TPK, wall supports VK and VKF. Fastening ladders to supports can be made with brackets KK. For making simpler corners and bends are commonly used adjustable joints NL, NL-TK and T-brackets VF.

Bend KSE90 is attached to KSE cable ladders with joint SSR.

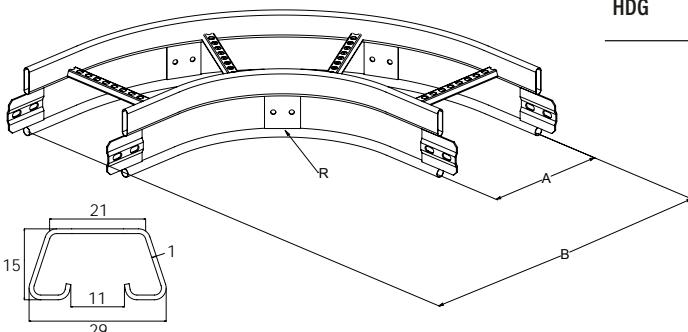

## Bend 90° KSF90

Bends KSF90 are used to make 90° angles for reinforced cable ladders KSF80 when the bending radius of cables or other needs require this. KSF90 bends' inside radius is R=300 mm.

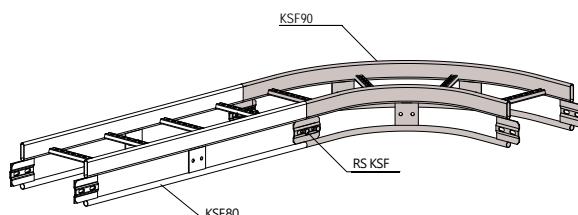

Bends can be connected to cable ladders by using bolt sets RS KSF. For one connection 4 bolt sets are needed.

Bend KSF90 is attached to KSF cable ladders with screw sets RS KSF.

# T-piece KST

HDG HST

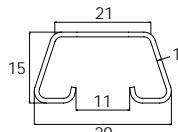

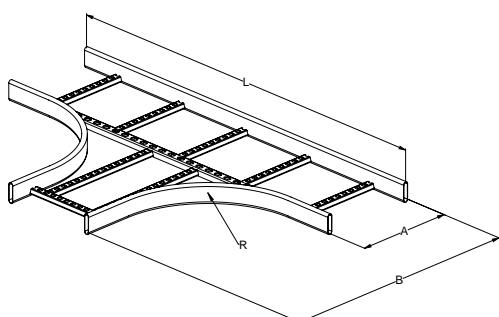

**MEKA®**

T-pieces KST are used to make T-junctions for KS20-, KS60- and KS80-type cable ladders when the bending radius of cables or other needs require this. KST inside radius options are R=300 mm, R=600 mm and R=1000 mm.

T-pieces can be connected to cable ladders by using joints SSR or SSU.

Please note!  
The product available  
to order with radius  
R=1000 mm.

## Joint SSR

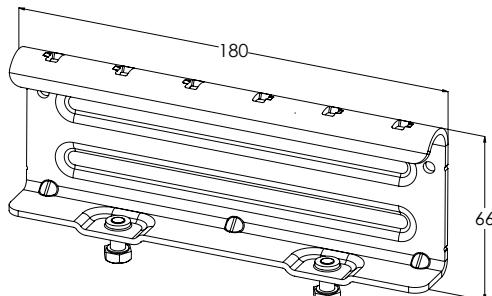

Joints SSR are used to extend KS20-, KS60- and KS80-type cable ladders as well as cable ladders' bends, T- and X-pieces. Installation of joints SSR is quick and convenient, as fastening bolts are already attached to joints. Special nibs inside of joints prevent attached elements from slipping apart.

Correctly installed joints ensure sufficient electrical conductivity and additional equipotential bonding is not required.

Please note!  
The HST product differs in appearance to the PG and HDG products.

CODE	PRODUCT <small>x = stock product</small>	WGT. kg / pc	PACKAGE
1449482	x SSR PG	0.37	10 PCE

PG Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 : PG

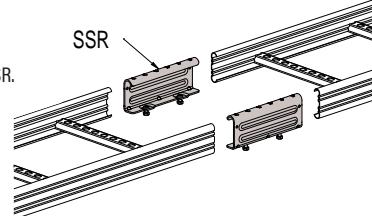

CODE	PRODUCT <small>x = stock product</small>	WGT. kg / pc	PACKAGE

Cable ladders KS80 and KS80 SP2.0 are attached together with joint SSU.

See the installation video.

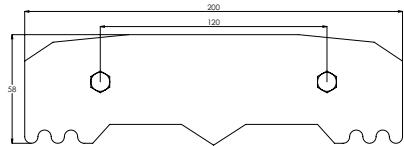

## Joint SSC

Joints SSC are used to extend KS20-type cable ladders. The extensions can be installed inside of cable ladders profiles, which is important at places where joints have to be invisible or protective covers have to be installed. Installation of joints SSC is quick and convenient, as fastening bolts are already attached to joints.

Correctly installed joints ensure sufficient electrical conductivity and additional equipotential bonding is not required.

1478162	x KS100 J XPG	0.22	10 PCE
---------	---------------	------	--------

XPG Manufactured of coated steel in accordance with standard EN 10346 : C1-C4

Product includes screw set: 1470353 RS 5 HDG (8 PCE)

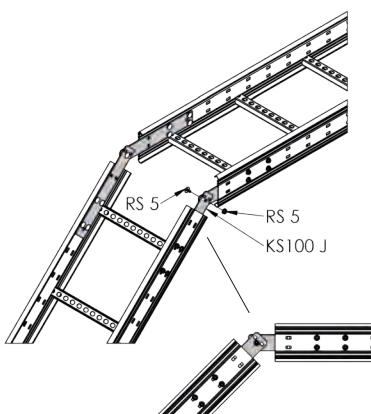

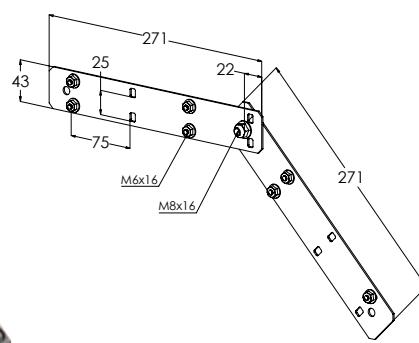

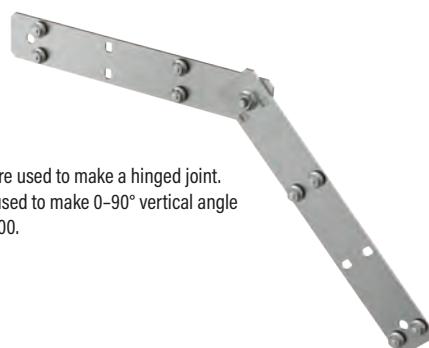

Two cable ladders KS100 are attached together with joint KS100 J.

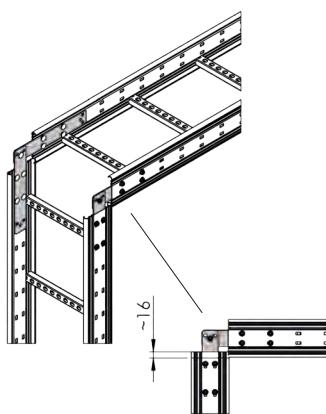

See the installation video.

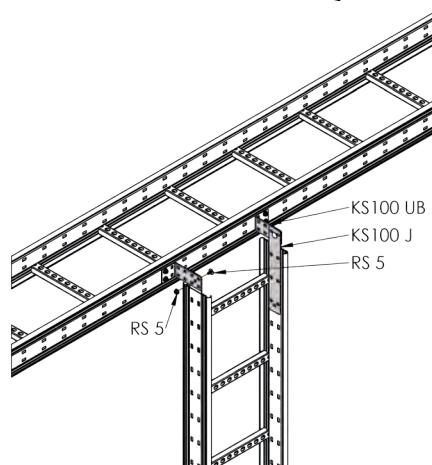

Two joints KS100 J are used to make a hinged joint. The hinged joint is used to make 0-90° vertical angle for cable ladder KS100.

A 45° angle made with two joints KS100 J for cable ladder KS100.

A 90° angle made with two joints KS100 J for cable ladder KS100.

Universal bracket KS100 UB and joint KS100 J is used to split KS100 cable ladder vertically.

The ends of the cable ladders must be shortened to avoid overlapping.

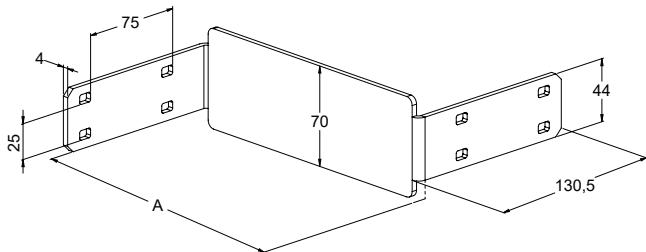

# Width-reduction piece KS100 FM

PG XPG

 MEKA®

Width-reduction pieces KS100 FM are used to connect different widths' cable ladders KS100 together.

KS100 FM pieces can be fixed to side profiles of KS100 cable ladders from one or both sides. Product set includes bolts and nuts for fixing.

1449659	FM-300 HDG	1.33	305	10 PCE

HDG Hot-dip galvanized after manufacturing in accordance with standard EN ISO 1461 : C1-C4

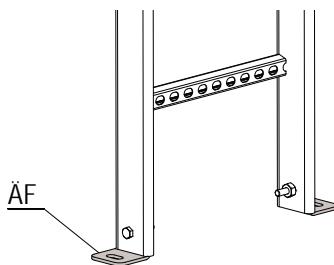

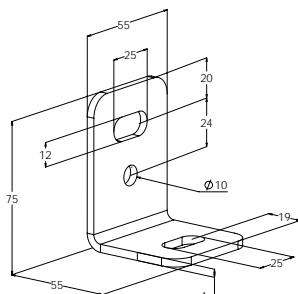

Width-reduction piece FM is used to join different widths of cable ladder together. The joints are reinforced with screws. Product doesn't include screw set.

## End bracket ÄF

End brackets ÄF are used for mounting KS20-, KS60- and KS80-type cable ladders as well as mounting rails AS, ASR, ASR-L and ASR-P to wall, floor or ceiling.

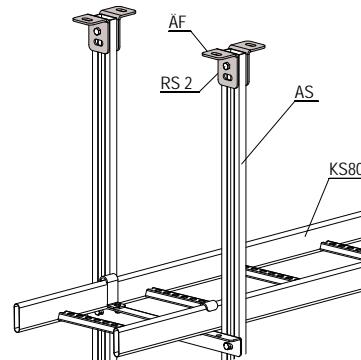

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1449679	x ÄF HDG	0.19	10 PCE

HDG Hot-dip galvanized after manufacturing in accordance with standard EN ISO 1461 : C1-C4

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1430313	HST ÄF	0.14	20 PCE

HST Manufactured of stainless steel in accordance with standard EN 10088 : C1-CX

End bracket ÄF is used to attach the ends of a cable ladder to the wall, floor or ceiling.

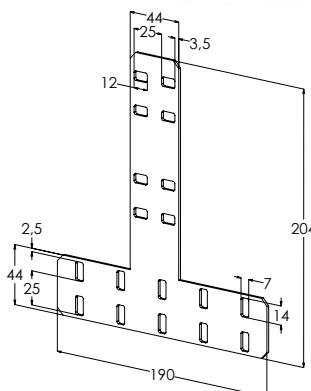

End bracket ÄF is used to attach the mounting rails to the wall, floor or ceiling. The end bracket is attached to the mounting rail with screw set RS 2.

## Vertical joint KS100 VEF

Vertical joints KS100 VEF are used to make vertical connections of KS100-type cable ladders from the middle of ladders' straight selections.

Product set includes bolts and nuts for fixing.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1478128	x KS100 VEF PG	0.27	10 PCE

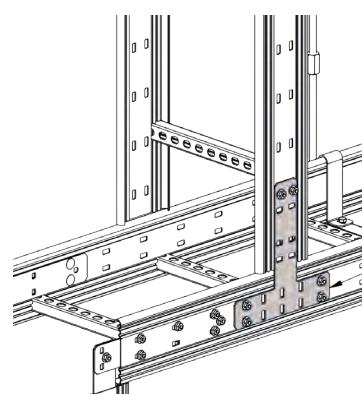

PG Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 : C1-C2

*Product includes screw set: 1470352 RS 5 EG (6 PCE)*

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE

XPG Manufactured of coated steel in accordance with standard EN 10346 : C1-C4

*Product includes screw set: 1470353 RS 5 HDG (6 PCE)*

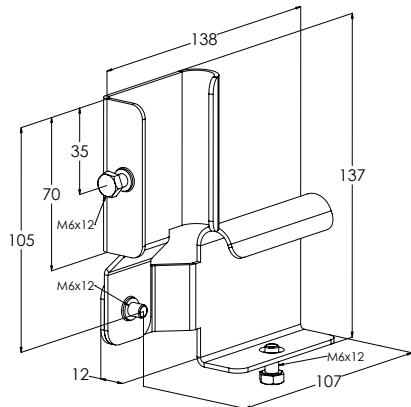

Vertical joints KS100 VEF are used to join KS100 cable ladders vertically.

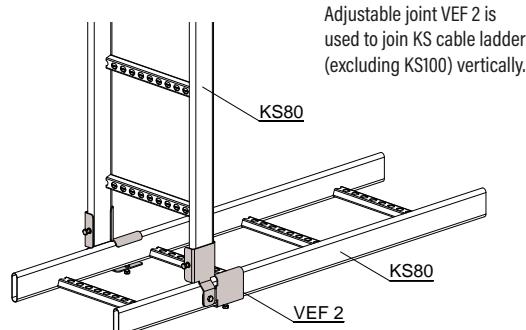

## Adjustable joint VEF 2

Adjustable vertical joints VEF 2 are used to make vertical connections of KS20-, KS60- and KS80-type cable ladders from the middle of ladders' straight selections. Joints VEF 2 have fixing bolts already at place and the installation is quick and convenient.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1449675	x VEF 2 HDG	0.34	10 PCE
HDG	Hot-dip galvanized after manufacturing in accordance with standard EN ISO 1461 : C1-C4		

## T-branch bracket VF

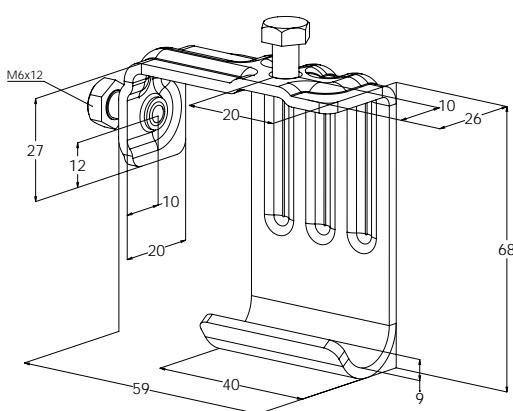

T-branch brackets VF are used to make simple corners, T- and X- junctions between KS20-, KS60- and KS80-type cable ladders. Brackets VF are fixed to end of cable ladder and placed on the side profile of the crossing ladder. Brackets VF have fixing bolts already at place that make installation quick and convenient. When installing more rigid cables, then branching sheets AG are recommended to use.

Correctly installed joints ensure sufficient electrical conductivity which eliminates the need to install a separate grounding wire between cable ladders.

Please note!  
The HST product differs in appearance to the PG and HDG products.

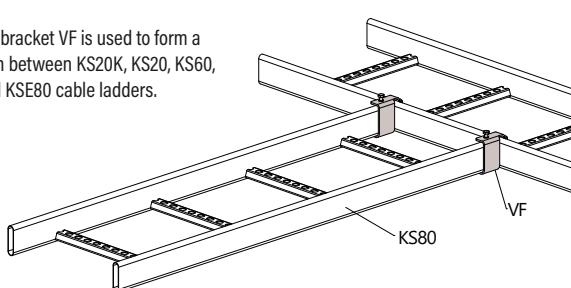

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE

Adjustable joint KSF-NL can be used to form a direct or flexible extension to cable ladder KSF80.

See the installation video.

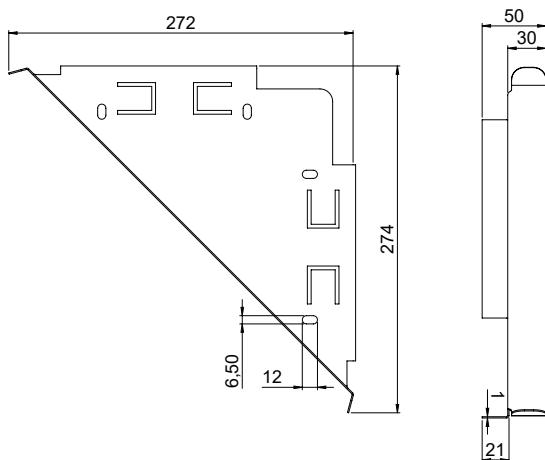

# Branching sheet AG

PG XPG

 MEKA®

Branching sheets AG are used to support cables when brackets VF or adjustable joints NL are used for making corners, T- and X-connections of KS-type cable ladders.

Fixing of AG sheets can be made by turning strips down across the ladders' side profile.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
------	------------------------------	-----------------	---------

1449690	AG PG	0.36	10 PCE
---------	-------	------	--------

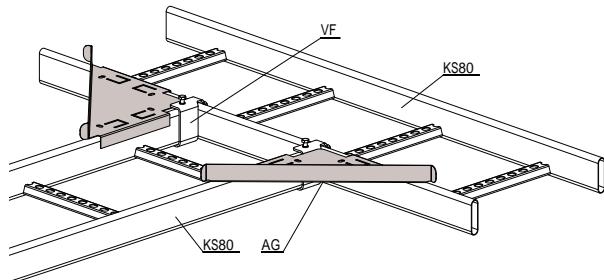

PG Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 : C1-C2

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
------	------------------------------	-----------------	---------

1433443	x AG XPG	0.36	10 PCE
---------	----------	------	--------

XPG Manufactured of coated steel in accordance with standard EN 10346 : C1-C4

Branching sheet AG reduces the angle of a T- and X-junction, which makes it easier to install thicker cables. We recommend using branching sheet when VF or VFF brackets are used for making T- or X-connections.

# Wall support VKI

PG

Adjustable wall supports VKI are used for mounting KS20 and KS60-type cable ladders directly to wall, AS-type mounting rails, HK- and TP2-type ceiling supports from the inner side of cable ladders. Supports VKI are placed inside of cable ladders that allows a good-looking installation at places where the design is important. Adjusting range of VKI supports from wall is 0-35 mm.

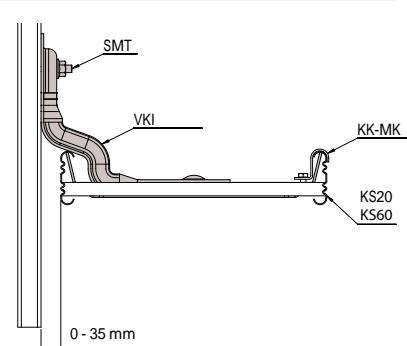

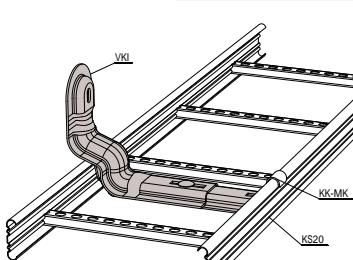

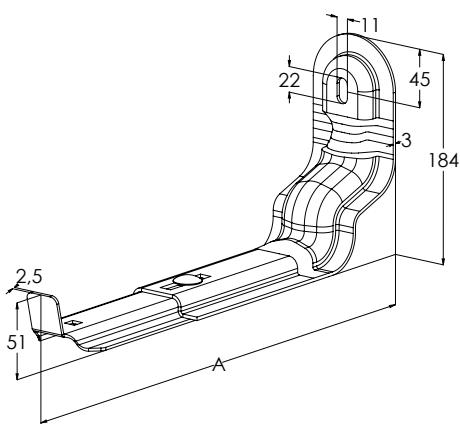

CODE	PRODUCT x = stock product	WGT. kg / pcl	A mm	LOADING max. kg	PACKAGE

# Intermediate support MK

PG HDG

 MEKA®

Intermediate supports MK are used on supporting KS20- and KS60-type cable ladders into ceiling by using threaded rods GT (one or two) or mounting rails PS. Fastening with two threaded rods (so-called gate support) is recommended for asymmetrical load of cables as well as for cable ladders 400 mm and wider, especially when 8 mm threaded rods are used for hanging.

Supports MK are placed inside of cable ladders that allow a good-looking installation at places where the design is important. For fixing MK supports to cable ladders brackets KK-MK can be used.

Mounting rail PS is attached to intermediate support MK with brackets PSF. Cable ladders are attached to the intermediate support with brackets KK-MK.

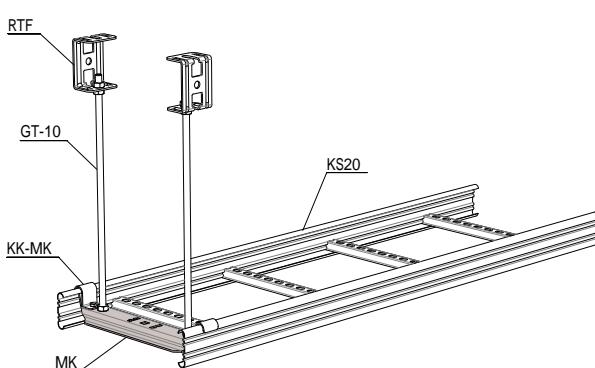

Intermediate support MK is attached to threaded rod GT-10 or GT-16 with nuts MU M10 or MU M16.

Gate supports are done with two GT-10 threaded rods.

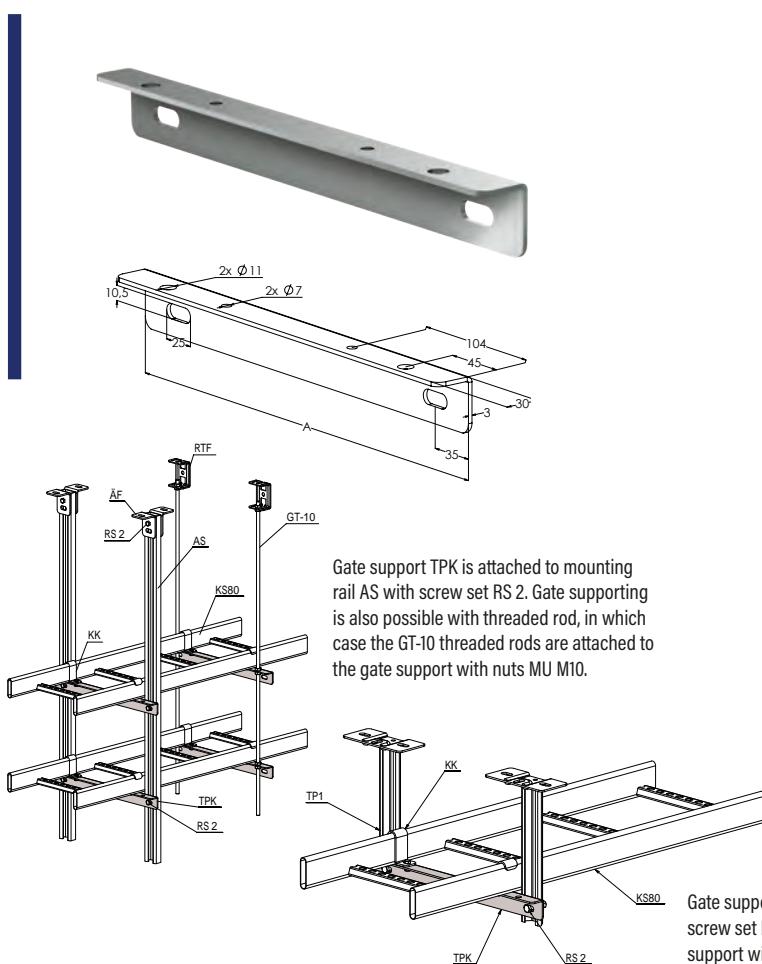

See the installation video.

## Gate support TPK

Gate supports TPK are used mainly for mounting KS80, KS100 and KSF80 cable ladders to ceiling by using threaded rods GT, mounting rails AS and FP as well as ceiling supports HK1, HK2 and TP1. For fixing cable ladders to TPK supports two brackets KK are recommended to use.

HST Acid-proof steel : C1-CX

Gate support TPK is attached to ceiling support TP1 with screw set RS 2. Cable ladders are attached to the gate support with bracket KK.

## Gate support PRT

Universal gate supports PRT are used as gate or intermediate supports for mounting cable ladders, cable trays and wire mesh trays to ceiling. Depending on loading division and width of trays the mounting can be made by using one or two threaded rods GT. For fixing cable ladders to PRT supports two brackets KK are recommended to use, wire mesh trays can be fixed with WMT CL connector sets and cable trays with bolt sets RS 5, if needed.

## Wall bracket VK2

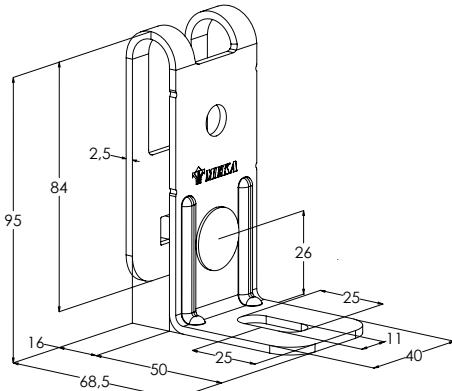

Wall brackets VK2 are used for mounting KS20-, KS60- and KS80-type cable ladders to wall, floor and ceiling. Brackets can also be used for fixing various devices to the side profiles of cable ladders. Wall brackets VK2 are installed around cable ladder profile and fixed with a bolt and nut included to product set.

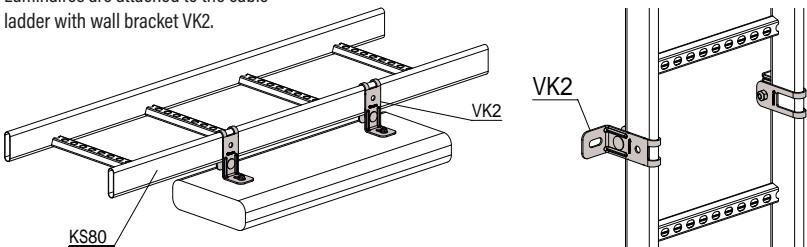

When using brackets VK2 the distance between cable ladders and surface is approx. 35 mm.

Please note!  
The HST product differs  
in appearance to the PG  
and HDG products.

Luminaires are attached to the cable ladder with wall bracket VK2.

Luminaires are attached to the cable ladder with wall bracket VK3.

Cable ladders (excluding KS100) are attached to the walls with wall bracket VK3. When using VK3, the gap between the cable ladder and wall is 77 mm.

See the installation video.

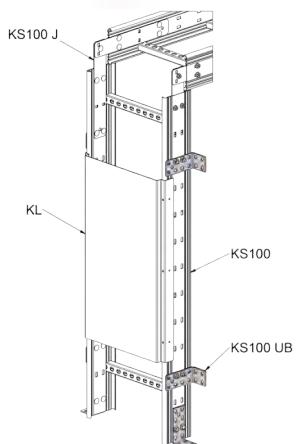

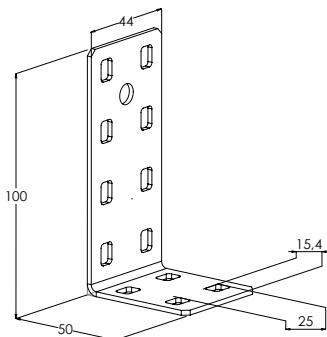

## Bracket KS100 UB

(PG) (XPG)

**MEKA®**

Universal brackets KS100 UB are used to make T- and X-junctions as well as, together with joints KS100 J, vertical connections of KS100-type cable ladders. Brackets UB can be also used for fixing additional equipment into KS100 cable ladders' side profiles.

Product set includes bolts and nuts for fixing.

Brackets KS100 UB is used to attach the cable ladder KS100 to the floor or wall.

## Side profile support KSF-VT

Side profile supports KSF-VT are used as additional reinforcement of cable ladders KSF80 when wall or intermediate supports are placed under ladders' lower tubes.

Product set includes two plates with bolts and nuts for fixing.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1449682	KSF-VT HDG	0.2	10 PCE

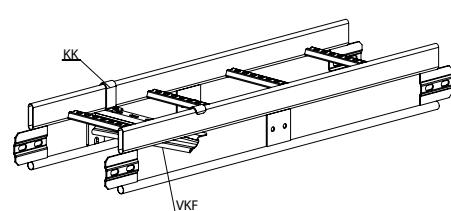

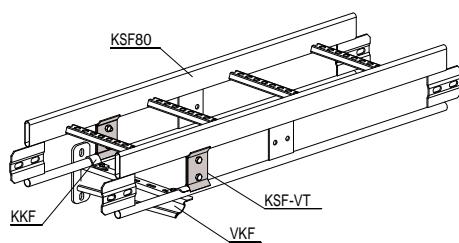

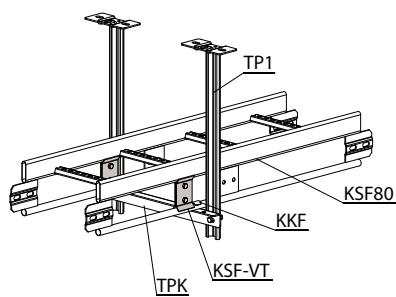

HDG Hot-dip galvanized after manufacturing in accordance with standard EN ISO 1461 : C1-C4

Product includes screw set: 1449698 RS 2 HDG (2 PCE)

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1430312	HST KSF-VT	0.27	10 PCE

HST Acid-proof steel : C1-CX

Product includes screw set: 1430429 HST RS 2 (2 PCE)

Side profile support KSF-VT is used as an additional reinforcement by the supports of cable ladder KSF80, if the cable ladder is attached from the lower tube.

Side profile support KSF-VT is used as an additional reinforcement by the supports of cable ladder KSF80, if the cable ladder is attached from the lower tube.

Supporting the 200–400 mm wide KSF ladders from the upper tube is possible with the VKF wall bracket. Side profile support KSF-VT is not required if cable ladder is supported from the upper tube.

# Ceiling support TP1

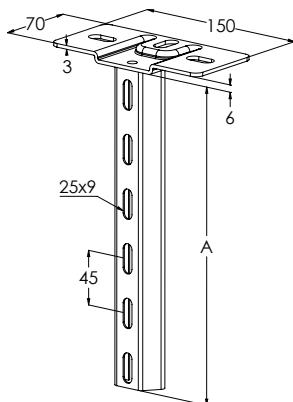

HDG HST

 Meka®

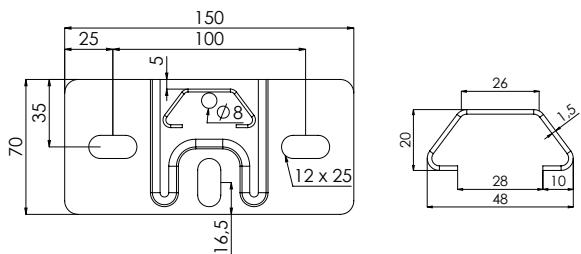

Ceiling supports TP1 are used for mounting cable ladders, -trays and wire mesh trays to ceiling or floor. Compatible supports for cable ladders and -trays, that can be used together with TP1, are intermediate supports HK13 and gate supports TPK. Usage TP1 together with HK13 supports guarantees a rigid construction that allows asymmetrical load distribution when cables with different weight are installed from both side of TP1.

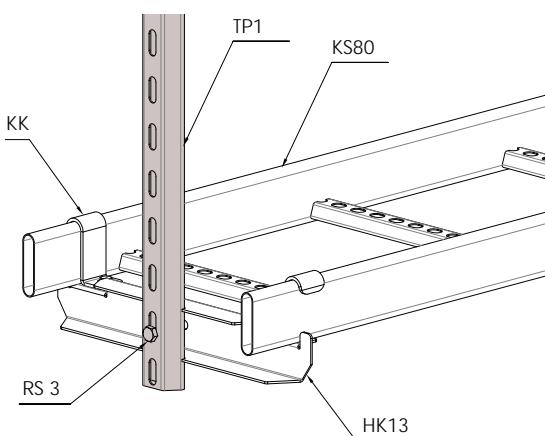

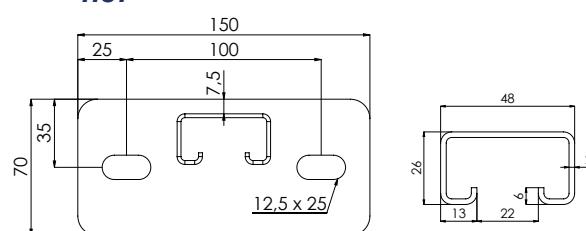

Please note!  
The HST product differs in  
appearance to  
the HDG product.

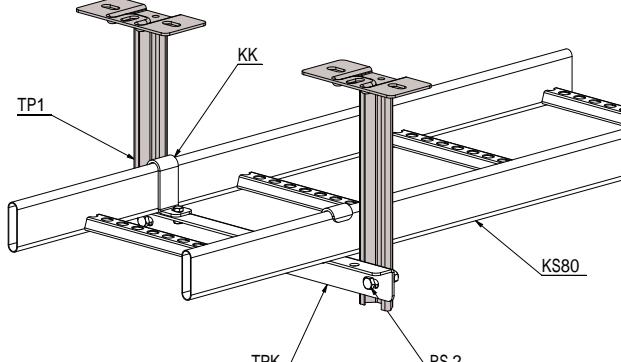

## HDG

## HST

Intermediate support HK13 is attached to ceiling support TP1 with screw set RS3.

In installing gate supports, gate support TPK is attached to ceiling support TP1 with screw set RS 2.

# Ceiling support TP2

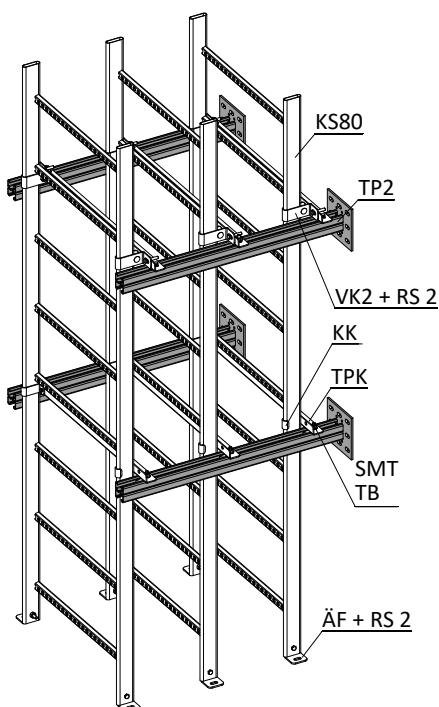

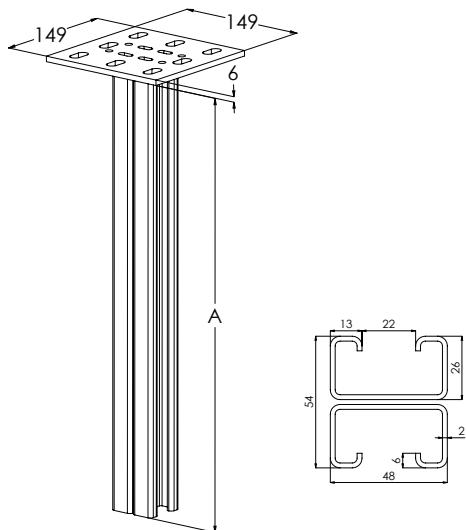

HDG HST

**MEKA®**

Ceiling supports TP2 are used for mounting cable ladders, cable trays and wire mesh trays to ceiling or floor. Cable ladders and trays can be mounted on both sides of TP2 at various level by using VK-type wall supports and sliding nuts SMT, AKM, TB or bolt sets RS.

Please note!  
The HST product differs in  
appearance to  
the HDG product.

Ceiling support TP2 enables wall installations for vertical cable ladders.

HDG HST

Joints JK are used to extend mounting rails AS, AS K, ASR, ASR-L, ASR-P and FP as well as ceiling supports HK1, HK2, TP1, TP2, TP2-L and TP2-P.

Depending on profile of mounting rail one or two JK have to be used. Product set includes four bolts and nuts (M8x40 and M8) for fixing.

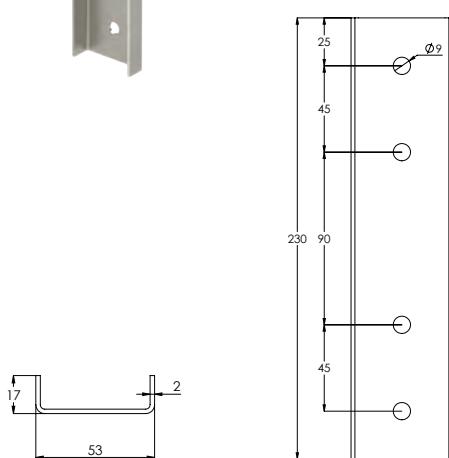

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1449673	x JK HDG	0.34	10 PCE
HDG	Hot-dip galvanized after manufacturing in accordance with standard EN ISO 1461 : C1-C4		

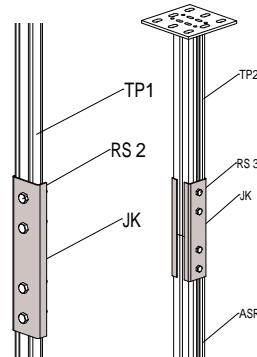

Product includes screw set: 1449673 RS 2 HDG (4 PCE)

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1430293	HST JK	0.29	10 PCE
HST	Acid-proof steel : C1-CX		

Product includes screw set: 1430293 RS 2 (4 PCE)

Ceiling support TP1 can be extended with mounting rail FP with joint JK.  
Ceiling support TP2 can be extended with mounting rail ASR with two JK joints.

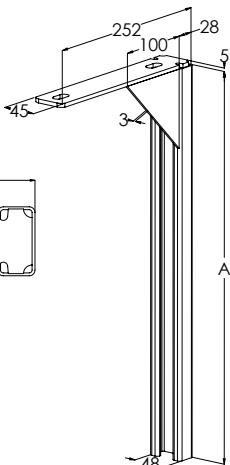

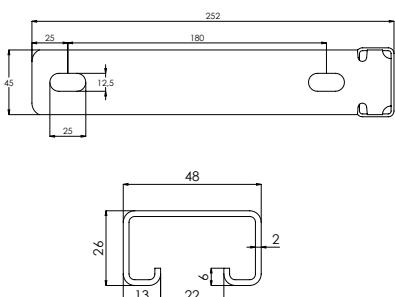

## Ceiling support HK2

HDG

 MEKA®

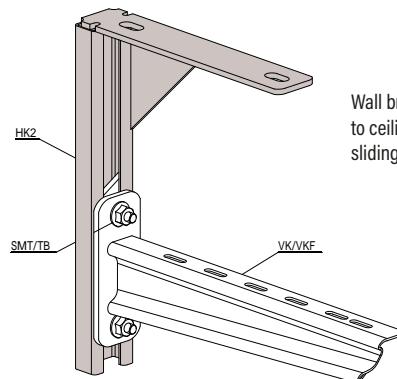

Ceiling supports HK2 are used to install cable ladders, -trays and wire mesh trays to ceiling or floor. Compatible supports for cable ladders and -trays that can be used together with HK2 are intermediate supports HK13, VK-type wall supports, gate supports TPK and mounting rails AS. HK2 supports can be installed near by walls.

CODE	PRODUCT x = stock product	WGT. kg / pc	A mm	PACKAGE
------	------------------------------	-----------------	---------	---------

1449633	HK2-300 HDG	1.19	315	10 PCE
1449635	HK2-500 HDG	1.44	495	10 PCE
1449637	HK2-750 HDG	2.01	765	10 PCE
1449640	HK2-1000 HDG	2.43	990	10 PCE

HDG Hot-dip galvanized after manufacturing in accordance with standard EN ISO 1461 : C1-C4

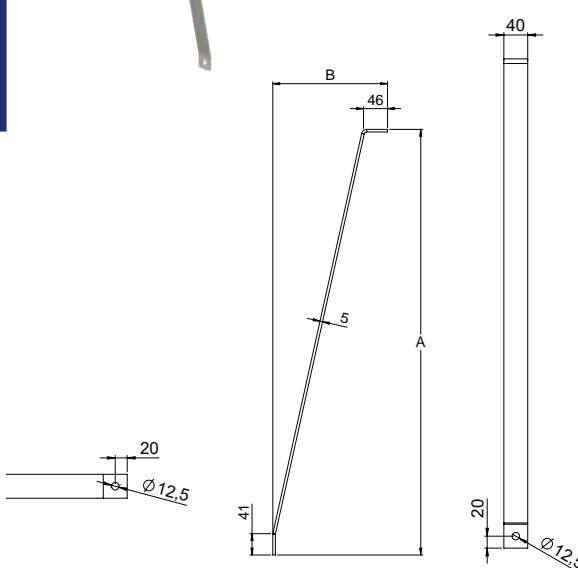

Wall brackets can be attached to ceiling support HK2 with sliding nuts SMT or TB.

## Side support ST

HDG

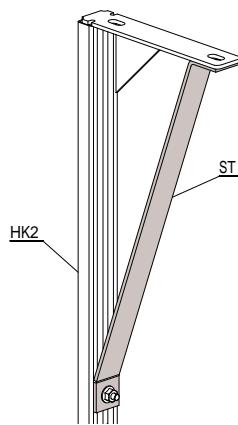

Side supports ST are used for additional supporting of ceiling supports TP1, TP2, HK1 and HK2 in cases when cable ladders or -trays are installed on one side of supports and bending moment is significant due to higher loading.

CODE	PRODUCT x = stock product	WGT. kg / pc	A mm	B mm	PACKAGE
------	------------------------------	-----------------	---------	---------	---------

1449150	ST-300 HDG	0.68	320	221	10 PCE
1449151	ST-500 HDG	0.94	520	221	10 PCE
1449152	ST-800 HDG	1.32	820	221	10 PCE
1449153	ST-1500 HDG	2.4	1520	365	10 PCE

HDG Hot-dip galvanized after manufacturing in accordance with standard EN ISO 1461 : C1-C4

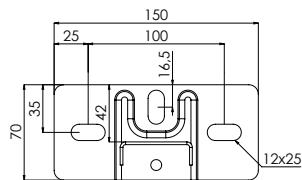

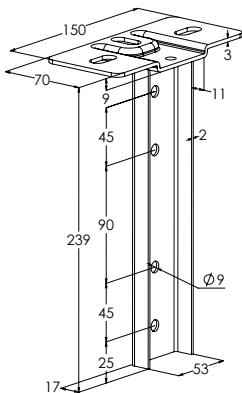

Ceiling support HK2 can be reinforced with side support ST. The side support is attached to the ceiling support with sliding nuts SMT or TB. The side support reduces lateral displacement in the ceiling support when under heavy load.

## Ceiling bracket AS-TF

Ceiling brackets AS-TF are used for fixing mounting rails AS to the ceiling or floor.

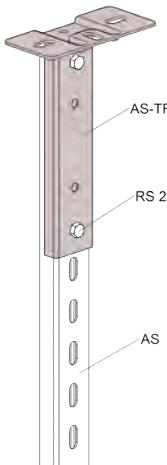

Product set includes 2 bolts and 2 nuts for fixing AS rails into brackets AS-TF.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1449220	x AS-TF HDG	0.6	1 PCE

HDG Hot-dip galvanized after manufacturing in accordance with standard EN ISO 1461 : C1-C4

Product includes screw set: 1449698 RS 2 HDG (2 PCE)

Ceiling bracket AS-TF is attached to mounting rail AS with screw set RS 2. Ceiling bracket AS-TF is used when the mounting rail's end must be attached to the floor or ceiling.

## Ceiling bracket ASR-TF

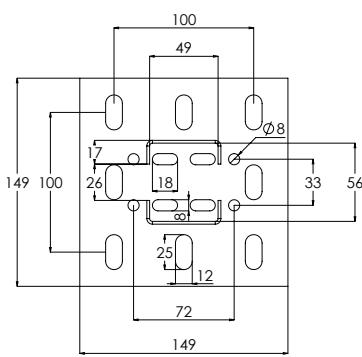

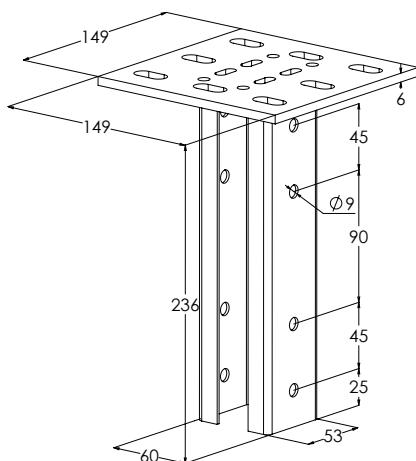

Ceiling brackets ASR-TF are used for fixing mounting rails ASR to the ceiling or floor.

Product set includes 4 bolts and 4 nuts for fixing ASR rails to brackets ASR-TF.

Please note!  
The HST product differs in appearance to the HDG product.

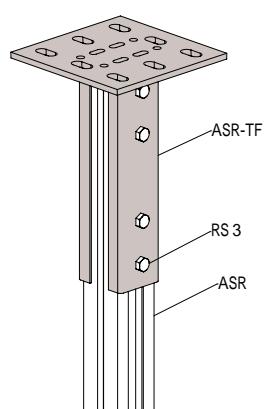

CODE	PRODUCT x = stock product	WGT. kg / pc	LOADING max. kg	PACKAGE
1449665	x ASR-TF HDG	1.57	700	1 PCE

HDG Hot-dip galvanized after manufacturing in accordance with standard EN ISO 1461 : C1-C4

CODE	PRODUCT x = stock product	WGT. kg / pc	LOADING max. kg	PACKAGE
1430316	HST ASR-TF	1.6	700	1 PCE

HST Manufactured of stainless steel in accordance with standard EN 10088 : C1-CX

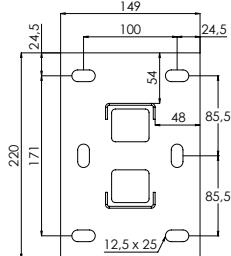

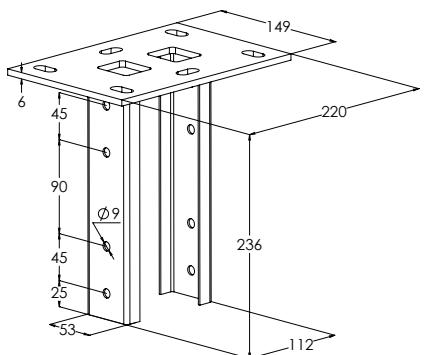

Ceiling bracket ASR-TF is attached to mounting rail ASR with screw set RS 3. Ceiling bracket ASR-TF is used when the mounting rail's end must be attached to the floor or ceiling.

## Ceiling bracket ASR-P-TF

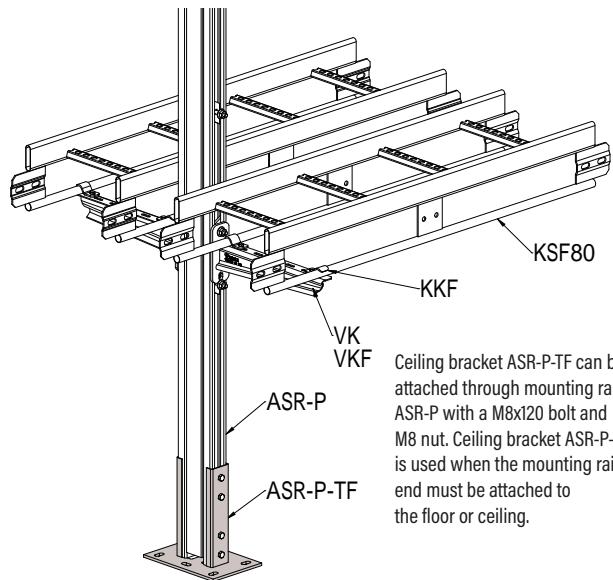

Ceiling brackets ASR-P-TF are used for fixing mounting rails ASR-P to the ceiling or floor. For fixing ASR-P rails into brackets ASR-P-TF four bolt sets RS12 (bolt M8x120 and nut M8) have to be ordered separately.

Please note that mounting rails ASR-P are not perforated.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1449490	ASR-P-TF HDG	2	1 PCE
HDG	Hot-dip galvanized after manufacturing in accordance with standard EN ISO 1461 : C1-C4		

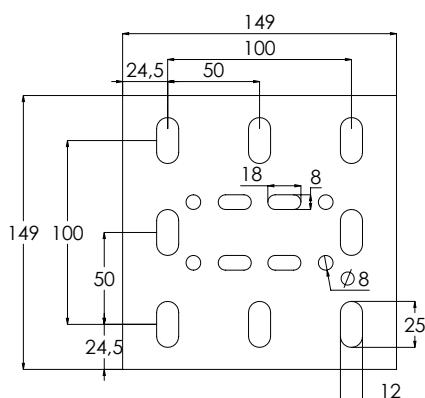

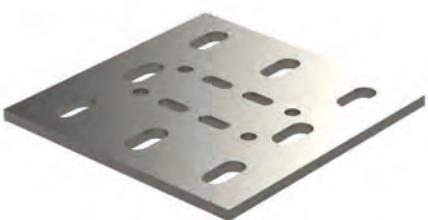

Ceiling bracket ASR-P-TF can be attached through mounting rail ASR-P with a M8x120 bolt and M8 nut. Ceiling bracket ASR-P-TF is used when the mounting rail's end must be attached to the floor or ceiling.

## Fixing plate PL

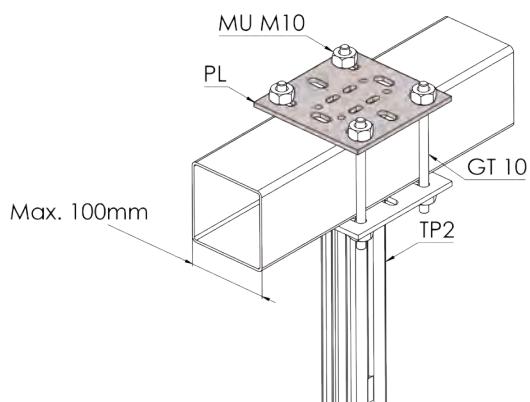

Fixing plates PL are used to attach TP2-type ceiling supports to I- and square beams. Plates PL can be fixed to TP2 by using M10x30 bolts and M10 nuts (bolt sets RS KSF). The width of beams can be max. 100 mm.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1449156	PL HDG	0.93	1 PCE
HDG	Hot-dip galvanized after manufacturing in accordance with standard EN ISO 1461 : C1-C4		

Fixing plate PL can be used to attach beams.

# Mounting rail AS

PG HDG HST

 Meka®

Mounting rails AS are used for fastening cable ladders and -trays to ceiling and wall. Use of mounting rails allows distributing the load to a larger area on the wall and height adjustment of the VK-type wall supports. AS rails can be used for mounting variable ceiling support also.

For mounting VK-type wall supports into AS rails sliding nuts SMT, AKM and TB are recommended.

CODE	PRODUCT x = stock product	WGT. kg / pc	L mm	S mm	PACKAGE

HST Acid-proof steel : C1-CX

Mounting rail AS makes it possible to distribute the load of a wall bracket to a larger area. The wall bracket is attached to the mounting rail with sliding nuts SMT, TB or AKM.

Mounting rail AS can be used to build a gate support,

## Mounting rail ASR

HDG HST

 MEKA®

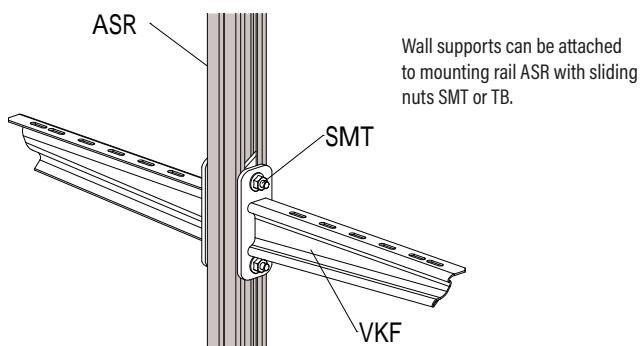

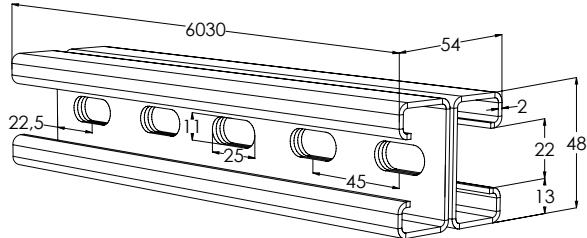

Two-sided mounting rails ASR are used for fastening cable ladders and -trays to ceiling and floor. For supporting are suitable VK-type wall supports that can be mounted from one or both sides of rails. Height adjustment of supports is easy, especially when for wall supports' fixing are used sliding nuts SMT, AKM or TB.

For mounting ASR rails to ceiling or floor brackets ÄF or ASR-TF can be used.

CODE	PRODUCT x = stock product	WGT. kg / pc	L mm	PACKAGE

## Mounting rail ASR-L

HDG

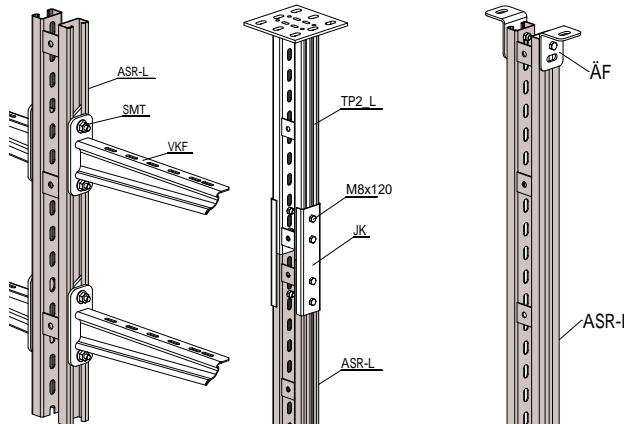

Two-sided mounting rails ASR-L are used for fastening cable ladders and -trays to ceiling and floor. For supporting are suitable VK-type wall supports that can be mounted from one or both sides of rails. Height adjustment of supports is easy, especially when for wall supports' fixing are used sliding nuts SMT, AKM or TB.

For mounting ASR-L rails to ceiling or floor brackets ÄF can be used.

CODE	PRODUCT x = stock product	WGT. kg / pc	L mm	PACKAGE
1449136	ASR-L L=6030 HDG	22.65	6030	1 PCE / 6 MTR
HDG	Hot-dip galvanized after manufacturing in accordance with standard EN ISO 1461 : CI-C4			

Wall brackets can be attached to mounting rail ASR-L with sliding nuts SMT or TB.

Ceiling support TP2-L can be extended with mounting rail ASR-L with two joints JK.

Mounting rail ASR-L can be attached to the ceiling or floor from its ends with end connector ÄF and screw set RS 2.

## Mounting rail ASR-P

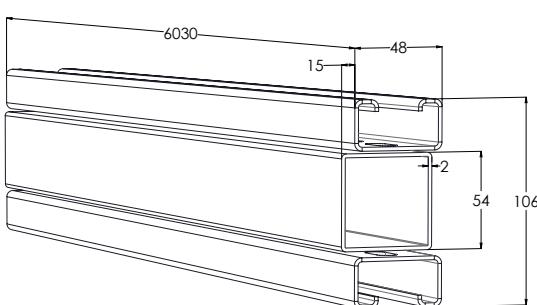

HDG

Two-sided mounting rails ASR-P are used for fastening cable ladders and -trays to ceilings and floor. For supporting are suitable VK-type wall supports that can be mounted from one or both sides of rails. Height adjustment is easy, especially when for wall supports' fixing are used sliding nuts SMT, AKM or TB.

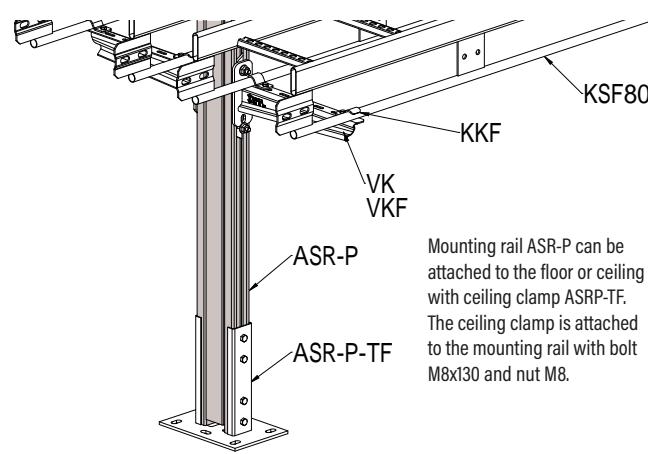

For mounting ASR-P rails to ceiling or floor brackets ASR-P-TF can be used.

Please note!  
The midsection of the mounting rail is not perforated.

CODE	PRODUCT x = stock product	WGT. kg / pc	L mm	PACKAGE
1449137	ASR-P L=6030 HDG	38.88	6030	1 PCE / 6 MTR
HDG	Hot-dip galvanized after manufacturing in accordance with standard EN ISO 1461 : CI-C4			

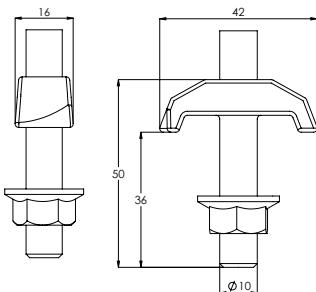

Mounting rail ASR-P can be attached to the floor or ceiling with ceiling clamp ASR-P-TF. The ceiling clamp is attached to the mounting rail with bolt M8x130 and nut M8.

## Sliding nut TB

HDG

 MEKA®

Sliding nuts TB are used to fasten VK-type wall supports for mounting rails AS, ASR, ASR-L and ASR-P as well as to ceiling supports HK1, HK2, TP2, TP2-L and TP2-P. Rubber pads keep TB nuts at place inside of rails and make fixing of wall supports easier.

CODE	PRODUCT x = stock product	WGT. kg / pc	LOADING max. kg	PACKAGE
------	------------------------------	-----------------	--------------------	---------

1449649	x TB HDG	0.065	800	10 PCE
HDG	HDG or corresponding corrosion protection : C1-C4			

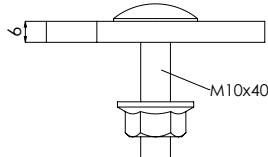

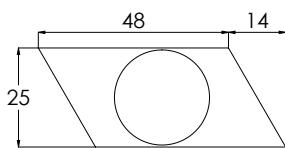

Sliding nut TB is slotted in the groove of a mounting rail or ceiling support, where it is locked in place by twisting its base inside the rail.

## Sliding nut SMT

HDG HST

Sliding nuts SMT are used to fasten VK-type wall supports to mounting rails AS, ASR, ASR-L and ASR-P as well as to ceiling supports HK1, HK2, TP2, TP2-L and TP2-P. Using SMT nuts allow smooth adjustment of the height of supports and setting the cableways straight.

Sliding nut SMT is slotted in the groove of a mounting rail or ceiling support, where it is locked in place by twisting its base inside the rail.

## Sliding nut AKM

HDG

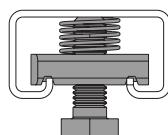

Sliding nuts AKM are used to fasten VK-type wall supports for mounting rails AS, ASR, ASR-L and ASR-P as well as to ceiling supports HK1, HK2, TP2, TP2-L and TP2-P.

Springs keep AKM nuts at place inside of rails and make fixing of VK-type wall supports easier.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
------	------------------------------	-----------------	---------

1449683	x AKM HDG	0.07	10 PCE
HDG	HDG or corresponding corrosion protection : C1-C4		

Sliding nut AKM is slotted in the groove of a mounting rail or ceiling support, where it is locked in place by twisting its base inside the rail.

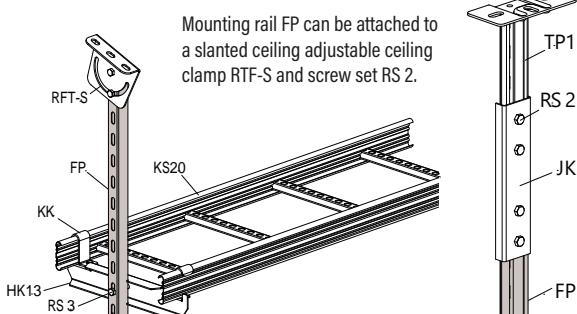

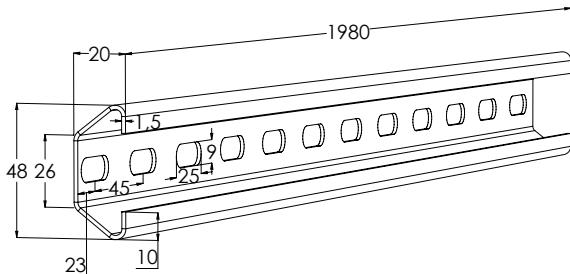

## Mounting rail FP

Mounting rails FP are used to attach ceiling brackets RTF-S as well as to extend ceiling supports TP1. Both solutions are suitable for mounting KS-type cable ladders to ceiling by using HK13-type intermediate supports.

Please note!  
The HST product differs  
in appearance to the PG  
and HDG products.

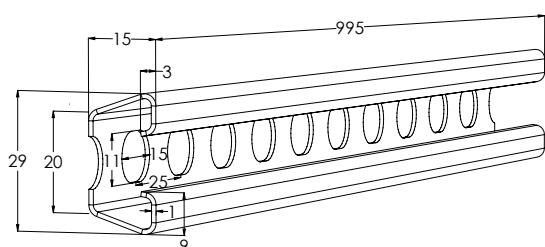

Ceiling support TP1  
can be extended with  
mounting rail FP  
and joint JK.

## Mounting rail CK

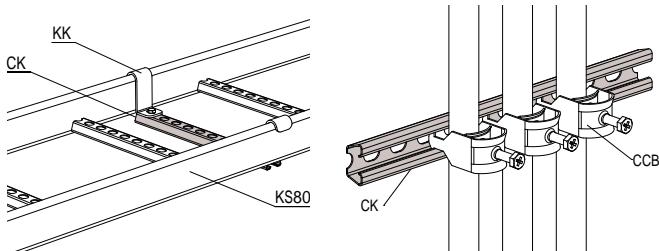

Mounting rails CK are used to fasten additional equipment to KS-type cable ladders as well as fix cables to wall. Cables can be fixed to CK rails by using cable clamps CCB.

CODE	PRODUCT <small>x = stock product</small>	WGT. kg / pc	L mm	PACKAGE
1449621	<b>x</b> CK L=995 PG	0.44	995	10 PCE / 10 MTR

PG Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 : C1-C2

Mounting rail CK can be attached to the cable ladder with bracket KK.

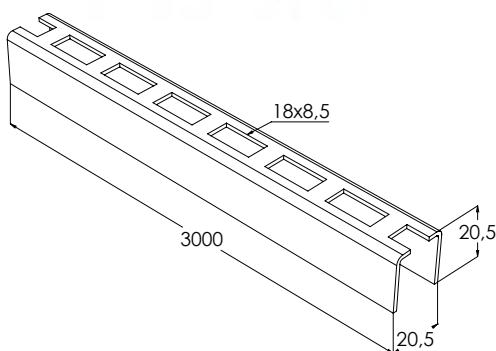

Mounting rail CK makes it possible to attach cables to the wall or ceiling with arch clamp CCB.

## Support rail PS

M PG

 MEKA®

Support rails PS are used for installing KS20- and KS60-type cable ladders and cable trays to ceiling. By using brackets PSF rails PS are compatible with intermediate supports MK, RMK and CT-IS. Using support rails make cable support system more rigid and enable asymmetrical load distribution even when using wider cable ladders and -trays.

CODE	PRODUCT x = stock product	WGT. kg / pc	L mm	PACKAGE

1431629	PF PG	0.13	10 PCE
PG	Manufactured of hot-dip galvanized steel in accordance with standard EN 10346: C1-C2		

*Product includes screw set: 1449112 RS VK2 HDG (1 PCE)*

Ceiling bracket PF is attached to mounting rail with the included screw set.

## **Beam bracket PK1**

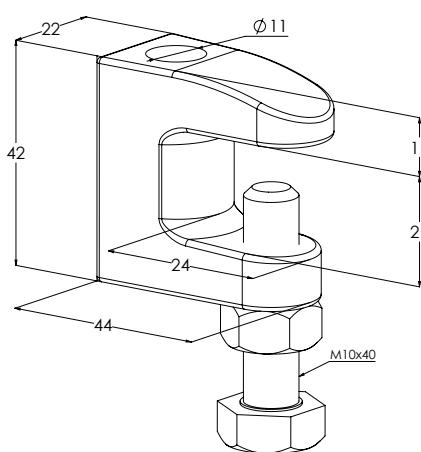

Two circular labels: a blue one on the left containing 'EG' and an orange one on the right containing 'HDG'.

Beam brackets PK1 are used to attach threaded rods GT-10 to I-beams. Threaded rods are attached to PK1 brackets by using MU M10 nuts. The thickness of the I-beam at the attachment point is max. 20 mm.

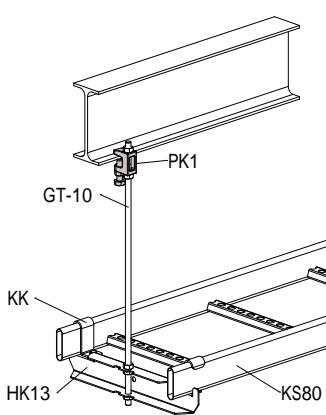

Safe work load of PK1 brackets is 300 kg.

CODE	PRODUCT x = stock product	WGT. kg / pc	LOADING max. kg	PACKAGE
1449631	x PK1 EG	0.14	300	10 PCE
EG	Electroplated with zinc after manufacturing in accordance with standard EN ISO 2081 :C1-C2			

CODE	PRODUCT X = stock product	WGT. kg / pc	LOADING max. kg	PACKAGE
1449200	PK1 HDG	0.15	300	10 PCE
HDG	Hot-dip galvanized after manufacturing in accordance with standard EN ISO 1461 :C1-C4			

Beam bracket PK1 is attached to the lower flange of an I beam. The threaded rod GT-10 is attached to the beam bracket with nuts M12 M10.

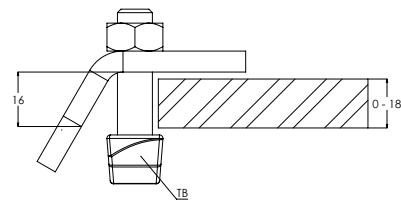

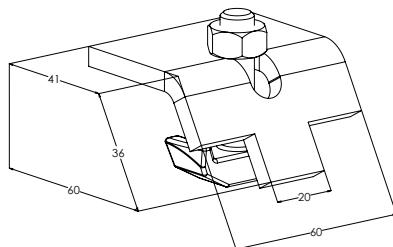

## Beam bracket PK2

HDG

 MEKA®

Beam brackets PK2 are used to fasten TP- and HK-type ceiling supports to I-beams via AS or ASR support rail. Two PK2 clamps and AS rail of suitable length are required to attach one support. Ceiling supports can be fixed to the AS rail with two M8x25 bolts and an M8 nut (bolt sets RS K). The thickness of the I-beam at the attachment point is max. 18 mm.

Safe work load of PK2 brackets is 300 kg.

CODE	PRODUCT x = stock product	WGT. kg / pc	LOADING max. kg	PACKAGE
1449632	x PK2 HDG	0.23	300	10 PCE
HDG	Hot-dip galvanized after manufacturing in accordance with standard EN ISO 1461 : C1-C4			

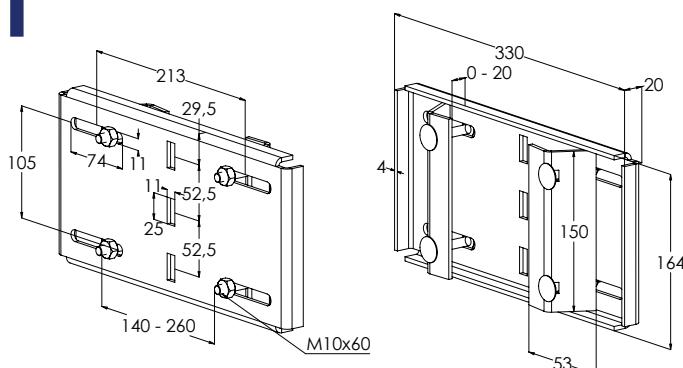

Beam bracket PK2 and mounting rail AS can be used to build a support for an I beam. Ceiling support TP1 is attached to mounting rail with screw set RS K. The lower flange of the beam may have a material strength of no more than 18mm.

## Beam bracket PK3

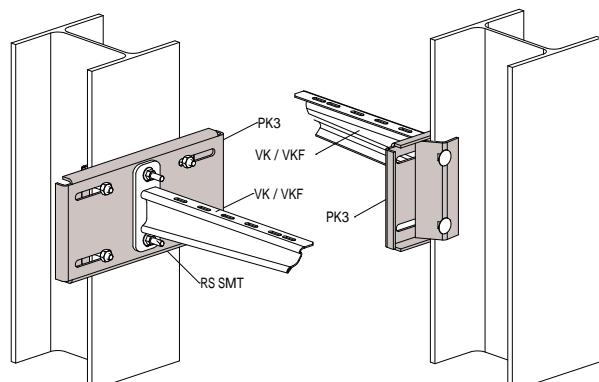

HDG

Beam brackets PK3 are used to fasten wall supports VK, VKF and VKZ to vertically installed I-beams. The width of the I-beam can be between 140-260 mm.

Product set of PK3 includes all necessary accessories for fastening brackets PK3 to the I-beam. Wall supports can be fixed to brackets PK3 by using M10x40 bolts and M10 nuts (bolt sets RS SMT).

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1449221	x PK3 HDG	0.29	1 PCE
HDG	Hot-dip galvanized after manufacturing in accordance with standard EN ISO 1461 : C1-C4		

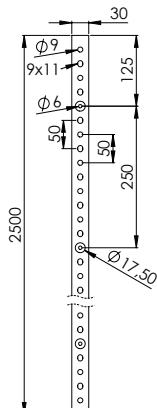

Beam bracket PK3 can be attached to a 140-260mm wide vertical beam.

Wall supports can be attached directly to the beam bracket with screw set RS SMT.

## Mounting rail MR

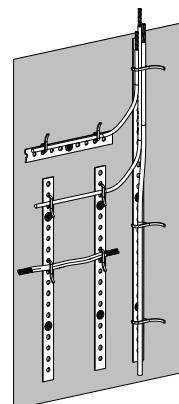

Mounting bars MR-30 are used to fix cables to walls and ceilings as well as to other surfaces. The length of the bar is 2.5 meters and the distance between the fastening holes is 25 cm. To fasten cables bars have 9 mm holes after every 25 mm. Distance between installed MR-30 bar and surface is 3,8 mm, which makes easier to fix cables with cable ties into the bar. For example, to fix cables on a concrete wall is easier to use MR-30 bars instead of fixing large number of cables separately.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1342075	x MR-30 L=2500 XPG	1.4	1 PCE / 2,5 MTR
XPG	Manufactured of coated steel in accordance with standard EN 10346 : C1-C4		

Manufactured of coated steel in accordance with standard EN 10346 : C1-C4

Mounting rail MR-30 and cable ties are used to attach cables to the wall.

## Ceiling bracket RTF-10

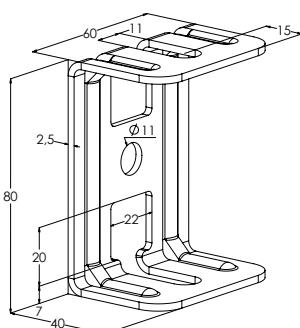

Please note!

# Cable clamp CCA

(PG) (HST)

 MEKA®

Cable clamps CCA are used to fix cables to KS-type cable ladders rungs and to mounting rails AS, ASR, ASR-L and ASR-P. Tightening torque of clamps depends on size of clamps and is between 1 and 3 Nm.

Sales unit of CCA clamps is package that includes 10 pieces of clamps.

Cable clamp CCA is used to attach cables to the intermediate cleats on cable ladders and to mounting rails.

Please note! Check the maximum allowed torque for cable clamp CCA from the product data sheet.

See the installation video.

## Bracket for cables FDC

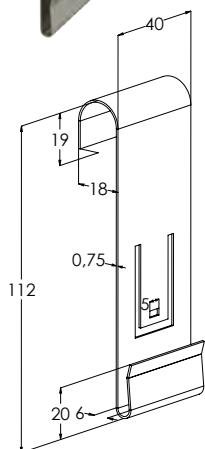

PG HST

 MEKA®

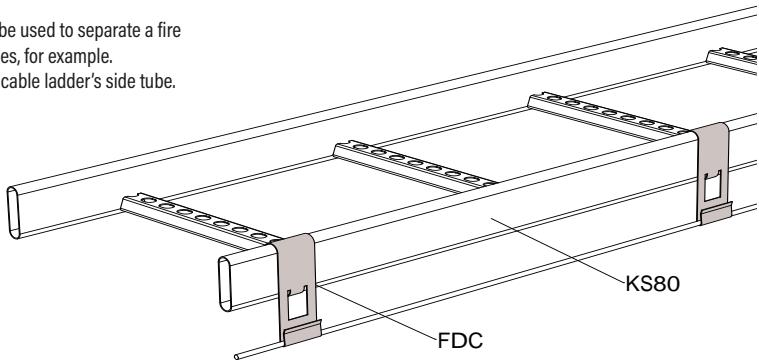

Cable brackets FDC are used to attach fire alarm and signalling cables to KS20, KS60 and KS80-type cable ladders side profiles. Brackets FDC can be mounted to the side profile of cable ladders and fixed by turning slats behind the ladders' profile. The cable will be placed approx. 50 mm below the side profile of the ladder.

Please note!  
The HST product  
differs in  
appearance to  
the PG product.

Bracket for cables FDC can be used to separate a fire alarm cable from other cables, for example.  
The bracket attaches to the cable ladder's side tube.

## Cable clamp CCB

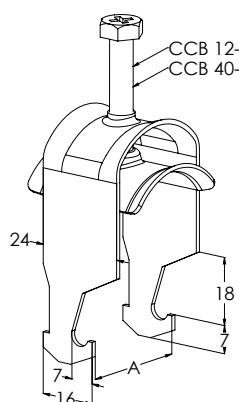

PG

Cable clamps CCB are used to fix cables to cable ladders rungs from underneath, to wire mesh trays WMT and to rails CK. Tightening torque of clamps depends on size of clamps and is between 1 and 3 Nm.

Sales unit of CCB clamps is package that includes 10 pieces of clamps.

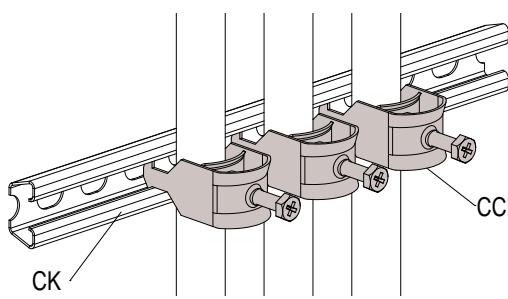

CCB 12-34 M6x30  
CCB 40-60 M8x45

Cover bracket KAP provides an additional 50 mm of cable space under the cover. Can be used with all cable ladders and covers SK, PSK and KRL. Recommended installation gap 1-1.5 m, depending on the width of the cover. Cover bracket KAP is attached to the cable ladder's side tube.

# Cover KRL-KS

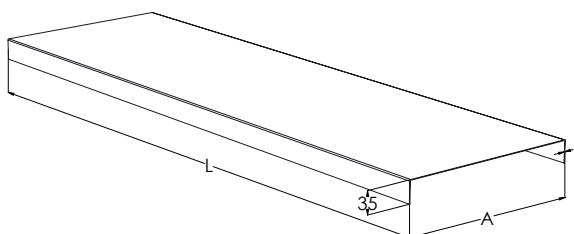

Covers KRL-KS are used to protect cables from damage, dirt and UV radiation as well as finishes the installation for straight sections of cable ladders. If necessary, covers can be fixed with cover brackets KAP or screws. When using KAP covers are raised approx. 50 mm that adds cable space and improve better air flow.

The height of the KRL-KS covers is 35 mm.

-----	---

Cover KRL-KSX is used to prevent dirt and dust from accumulating on the cables. The cover is attached to the cable ladder with screws.

Up-to-date and comprehensive product information, test results and example installations are available on our website.

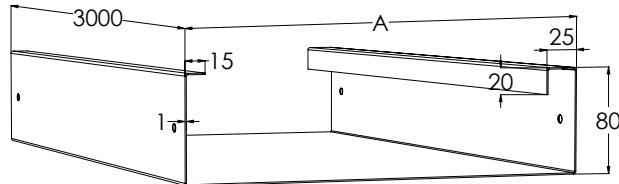

[www.meka.eu](http://www.meka.eu)

## Bottom cover PPU

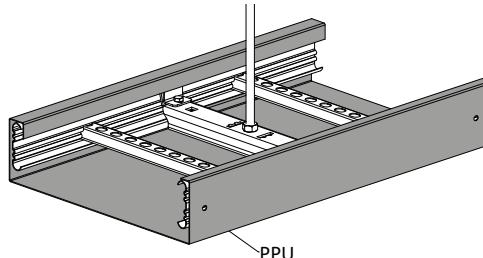

(M) (PG)

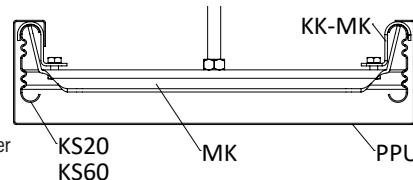

Bottom covers PPU are used to provide visual cover and protect cables from dents underneath of KS20-, KS60- and KS80-type cable ladders' straight sections. Covers PPU can be mounted from underneath and fixed with screws if necessary.

Bottom cover PPU covers the cable ladder from the sides and from below. The bottom cover is secured with screws.

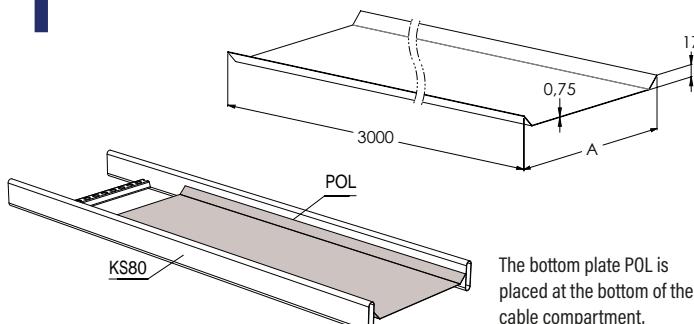

It is also possible to install bottom cover PPU on top of KK-MK brackets.

## Bottom plate POL

(PG) (XPG)

Bottom plates POL are used to provide visual cover and protect cables from dents underneath of cable ladders' straight sections. POL plates are suitable for all Meka cable ladders and can be installed inside of cable ladders without fixing.

The bottom plate POL is placed at the bottom of the cable compartment.

# Low voltage gutter SR

PG XPG HST

 MEKA®

Low voltage gutters SR are used to separate cables within cable ladders, cable trays and wire mesh trays. Gutters SR are 25mm high and do not extend over the edges of cable ladders or -trays. For fixing SR to cable ladders bolts and nuts, for instance, can be used.

Please note!  
The HST product  
differs in appearance  
to the PG product.

HST Acid-proof steel : C1-CX

Low voltage gutter SR is used when a separate section for low-voltage wires is required. Low voltage gutter SR is attached to the cable ladder's intermediate cleat with a cable tie or screw.

# Separation plate AP

M PG HST

 MEKA®

Separation plates AP are used to separate cables, especially low and high voltage cables, within cable ladders, cable trays and wire mesh trays.

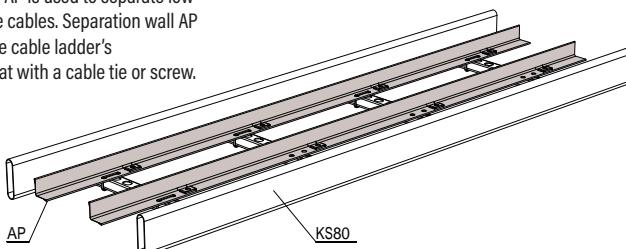

AP plates can be fixed by using cable ties, bolts and nuts or screws. When separation plates are used inside non-perforated cable trays KRA then support plates APT can be used for fixing.

Please note!  
The HST product  
differs in appearance  
to the PG product.

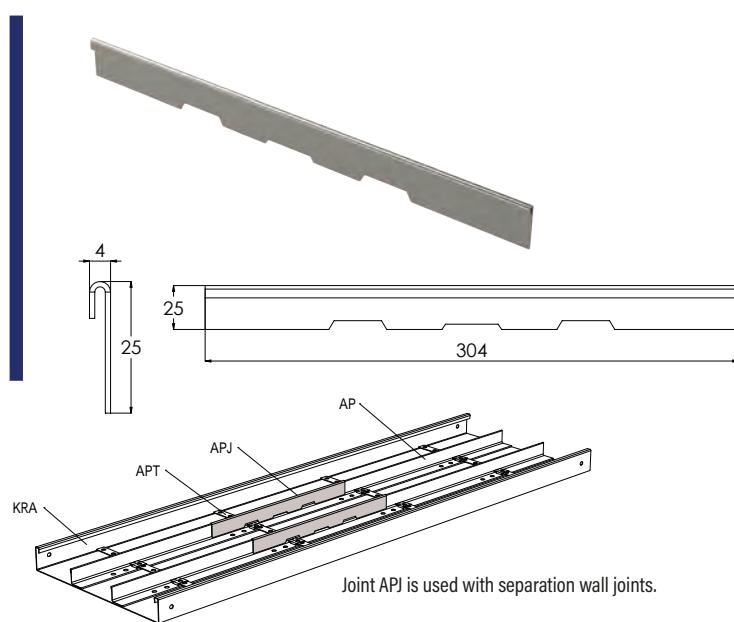

Separation plate AP is used to separate low and high voltage cables. Separation wall AP is attached to the cable ladder's intermediate cleat with a cable tie or screw.

## Joint APJ

M PG XPG

Joints APJ are used to connect and hold ends of separation plates AP securely together. Joints are simply pushed onto AP plate ends without tools.

# Lighting fixture VM-KS

PG

Lighting fixtures VM-KS are used for mounting luminaires and other devices to rungs of KS-type cable ladders. Fixtures VM-KS are mounted inside cable ladder rung profiles from below.

CODE	PRODUCT x = stock product	WGT. kg / pc	LOADING max. kg	PACKAGE
1432897	VM-KS PG	0.005	40	100 PCE
PG	Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 : C1-C2			

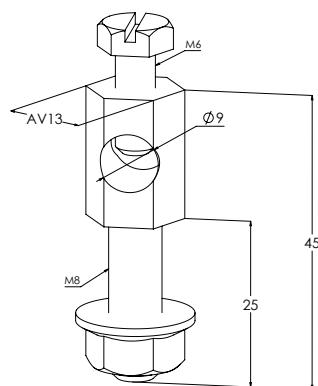

Lighting fixture VM-KS makes it possible to attach lights to a cable ladder's transverse cleat. The lighting nut's head is pushed inside the cleat and locked in place by tightening the screw so that the base rotates to rest on top of the cleat's edges.

# Earthing terminal PE

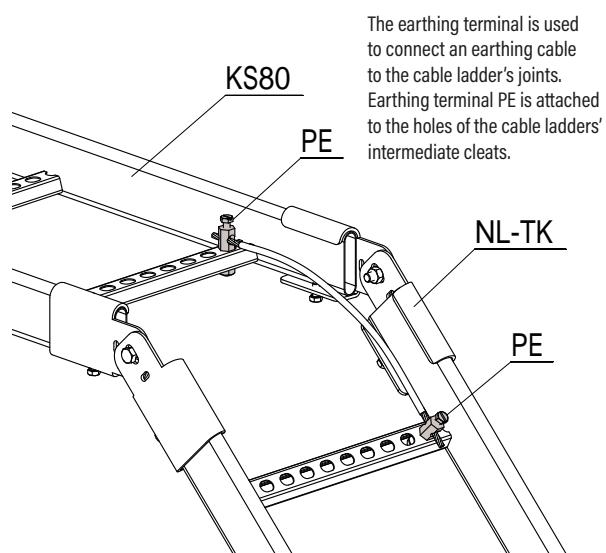

HDG

Earthing terminals PE are used to ground cable ladders, lighting support rails, cable trays and wire mesh trays at places where it is especially needed. PE terminal has ø9 mm hole for fixing the earthing wire.

Mounting can be done easily into cable ladders' rungs or cable trays' perforation. Product set includes bolt and nut.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1449799	x PE HDG	0.033	10 PCE
HDG	HDG or corresponding corrosion protection : C1-C4		

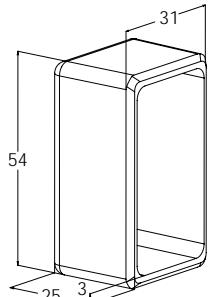

The earthing terminal is used to connect an earthing cable to the cable ladder's joints. Earthing terminal PE is attached to the holes of the cable ladders' intermediate cleats.

## End plug SP

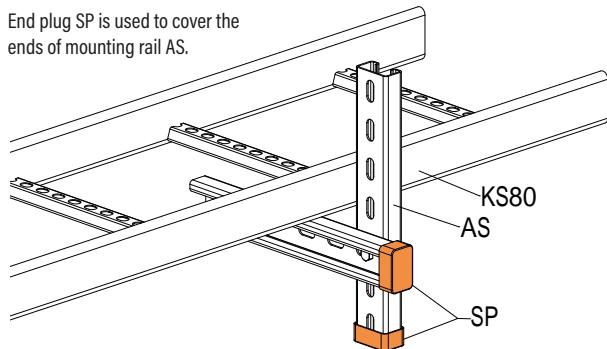

End plugs SP are used to cover ends of AS mounting rails and ceiling brackets HK1 and HK2.

Orange colour plugs are visible in dim light that is important for security reason.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1449672	x SP	0.01	10 PCE

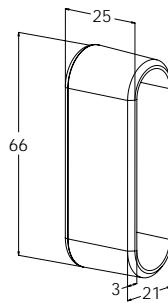

End plug SP is used to cover the ends of mounting rail AS.

## End plug ÄP

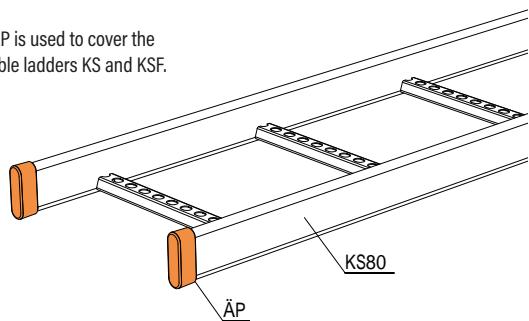

End plugs ÄP are used to cover ends of KS-type cable ladders and protect profiles from dust, humidity and bugs.

Orange colour plugs are visible in dim light that is important for security reason as well.

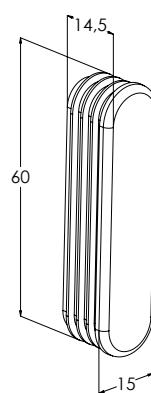

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1449681	x ÄP	0.009	10 PCE

End plug ÄP is used to cover the ends of cable ladders KS and KSF.

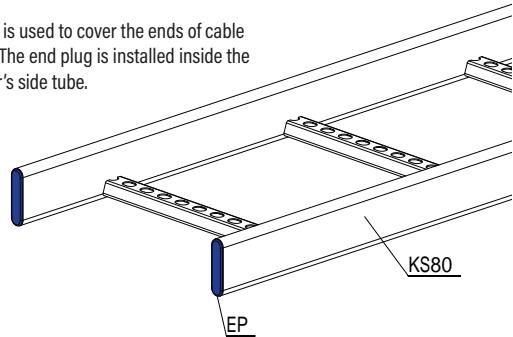

## End plug EP

End plugs EP are used to cover ends of KS80-type ladders, especially for improved hygiene with KSE80 food industry cable ladders.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1449717	x EP	0.005	10 PCE

End plug EP is used to cover the ends of cable ladder KSE. The end plug is installed inside the cable ladder's side tube.

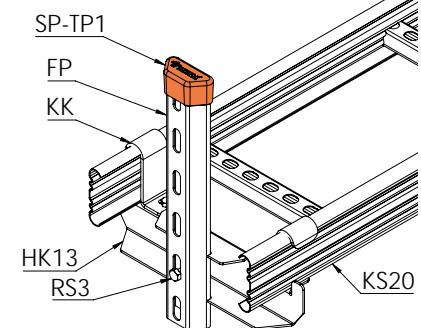

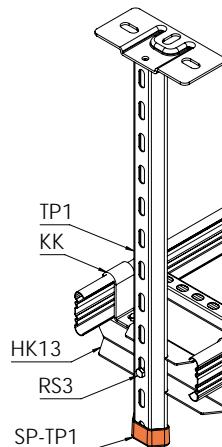

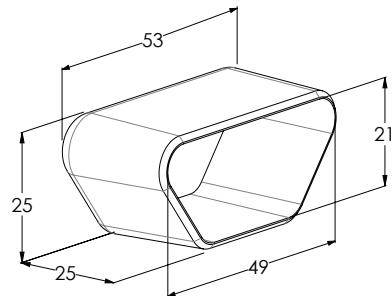

## End plug SP-TP1

End plugs SP-TP1 are used to cover ends of mounting rails FP and ceiling brackets TP1.

Orange colour plugs are visible in dim light that is important for security reason.

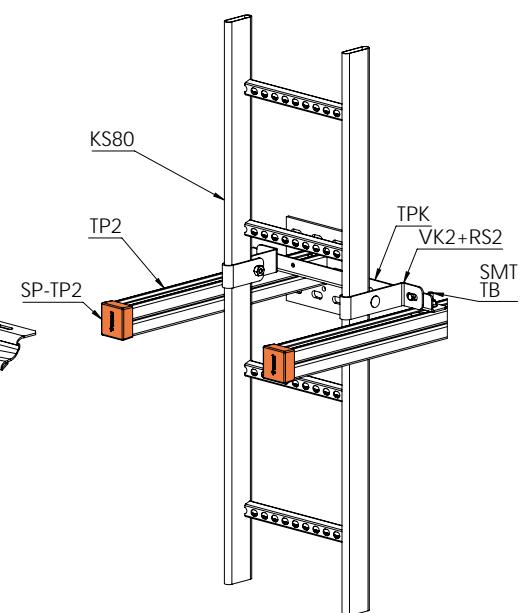

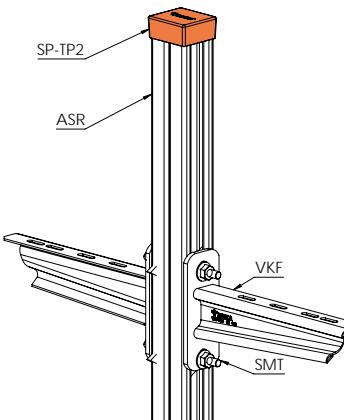

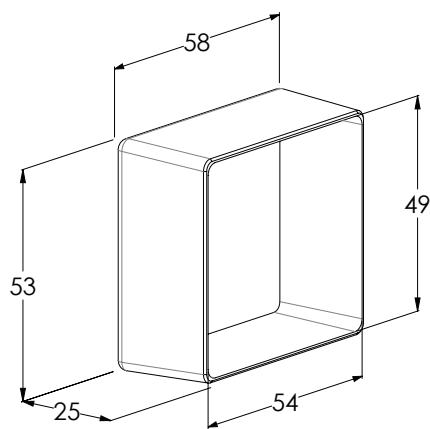

CODE	PRODUCT	WGT. kg / pc	PACKAGE
x = stock product			
1449726	x SP-TP1	0.006	10 PCE

The end plug SP-TP1 is pressed onto the end of the ceiling support TP1 and the mounting rail FP.

## End plug SP-TP2

End plugs SP-TP2 are used to cover ends of mounting rails ASR and ceiling brackets TP2.

Orange colour plugs are visible in dim light that is important for security reason.

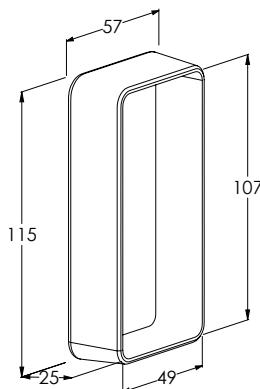

CODE	PRODUCT	WGT. kg / pc	PACKAGE
x = stock product			
1449727	x SP-TP2	0.012	10 PCE

The end plug SP-TP2 is pressed onto the end of the mounting rail ASR and the ceiling support TP2.

Cable Management Systems

2023  
Cable Trays

Suitable for office  
and commercial  
premises.

Cables remain neatly  
hidden on  
the cable tray.

## Cable trays

### KRA M

#### Non-perforated white cable tray

95 kg/m (2 metre span)

Typical locations of use include office and commercial buildings, schools, hospitals and shopping centres. For installation in areas where the cable tray remains visible but cables need to be hidden. Made of pre-galvanised steel plate with white paint. Painted cable trays are delivered with a protective plastic film.

### KRB M

#### Perforated white cable tray

95 kg/m (2 metre span)

Perforation enhances airflow and cools the cables installed on the tray. Typical locations of use include office and commercial buildings, schools, hospitals and shopping centres. For areas, where a finished look is important, which the painted surface is used to achieve. Made of pre-galvanised steel plate with white paint. Painted cable trays are delivered with a protective plastic film.

### KRA PG

#### Non-perforated cable tray

95 kg/m (2 metre span)

Typical locations of use include office and commercial buildings, schools, hospitals and shopping centres. Made of pre-galvanised steel plate with 20 µm thick galvanising. For installation in areas where the cable tray remains visible but cables need to be hidden.

### KRB PG

#### Perforated cable tray

95 kg/m (2 metre span)

Perforation enhances airflow and cools the cables installed on the tray. Typical locations of use include office and commercial buildings, schools, hospitals and shopping centres. Made of pre-galvanised steel plate with 20 µm thick galvanising.

**Cable trays are made with 40 mm and 60 mm heights. Cable trays and installation parts are available on order with 90 mm and 110 mm heights.**

**Cable trays are available in widths of 100-600 mm. Standard length is 3 metres.**

**Load-carrying capacity of MEKA® cable trays have been tested in compliance with IEC 61537 test type 3.**

# Fire-resistant KR cable trays

Fire rating E90

PRODUCT	SPAN LENGTH max (m)	WIDTH max (mm)	LOADING max (kg/m)
KRA	1,5	500	10

All lengths and surface treatment options up to a 500 mm width.

TYPE	PRODUCTS	
Bends	RS90	All material and surface treatment options. Maximum allowed width 500 mm. Corner pieces must be supported at no further than 300 mm from both joints.
Bracket	PSF	All material and surface treatment options.
Ceiling brackets	RTF-10, RTF-16, RTF-S, RTF-Z	All products and all material and surface treatment options. Fastening equipment that is rated for fire safety must be used with ceiling brackets.
Ceiling supports	TP1, TP2, TP2-L, TP2-P	All products and all material and surface treatment options. Fastening equipment that is rated for fire safety must be used with ceiling brackets.
Covers	KRL, KRL-RS90, KRL-RT	All products and all material and surface treatment options. Maximum allowed width is 500 mm.
End plate	P-KRA	All material and surface treatment options. Maximum allowed width is 500 mm.
Gate supports	MK, TPK, PRT	All products and all material and surface treatment options. Gate supports must be attached to the ceiling with two threaded rods.
Intermediate supports	RMK	All surface treatment options in widths 200-500 mm. RMK must be attached to the ceiling with two threaded rods.
Joints	RSS	All material and surface treatment options. Maximum allowed width is 500 mm.
Mounting rails	AS, AS-WALL, FP	All products and all material and surface treatment options. Mounting rails must be attached to the wall. Fastening equipment that is rated for fire safety must be used with mounting rails.
Nuts	MU 6, MU 10, MU 16	All products and all material and surface treatment options. MU 6-nut is allowed only in tip attachments, not in supports.
Screw sets	RS1, RS2, RS3, RS4, RS KSF, RS SSU, RS VK2, RS MEK J 10	All products and all material and surface treatment options.
Separation plates	AP, SR	All products and all material and surface treatment options.
Sliding nut	SMT	All material and surface treatment options.
T pieces	RT	All surface treatment options. Maximum allowed width is 500 mm. T pieces must be supported at no further than 300 mm from each joint.
Threaded rods	GT-6, GT-10, GT-16	All products and all material and surface treatment options. GT-6 threaded rod is allowed only in tip attachments, not in supports. Fire-rated fastening equipment is required when using threaded rods.
Wall supports	VK, VKF, VKZ, VKZ-N	All products and all material and surface treatment options. VKZ and VKZ-N must always be supported with a threaded rod from the support's tip to the ceiling. VK and VKF may be attached to the wall directly with fire-rated fastening equipment, without the need for the tip to be attached. When a support is attached from the tip, the support must be wider than the cable tray. Maximum allowed widths without tip-support are: VKF 600 mm and VK 500 mm. With a tip-support 100 mm wider wall support is accepted.

## Tip attachment E90

Tip attachment is required to achieve the E90 fire rating, if wall support VK or VKF is attached with a sliding nut SMT to a mounting rail AS. In this case, a support that is wider than the cable tray is required in order to attach the M6 threaded rod to the outermost hole.

The tip attachment is not required to achieve the E90 fire rating, if wall support VK or VKF are attached together through a ceiling support TP2 with a bolt.

## Wall support E90

In an E90 fire rating compliant installation, VK and VKF may be attached to the wall directly with fire-rated fastening equipment, without the need for the tip to be attached.

## Potential equalisation

IEC 61537

### Gate support E90

In E90 fire rating compliant gate supports, intermediate support RMK must be installed with two threaded rods. Threaded rod GT-10 is attached to the intermediate support with two MU M10 nuts.

RMK-40-100 and RMK-60-100 can be used only in an E60 compliant installations by attaching them by one threaded rod GT-10. In that case the maximum support interval is 1.25 m and the maximum loading is 5 kg/m.

### Installation of a corner E90

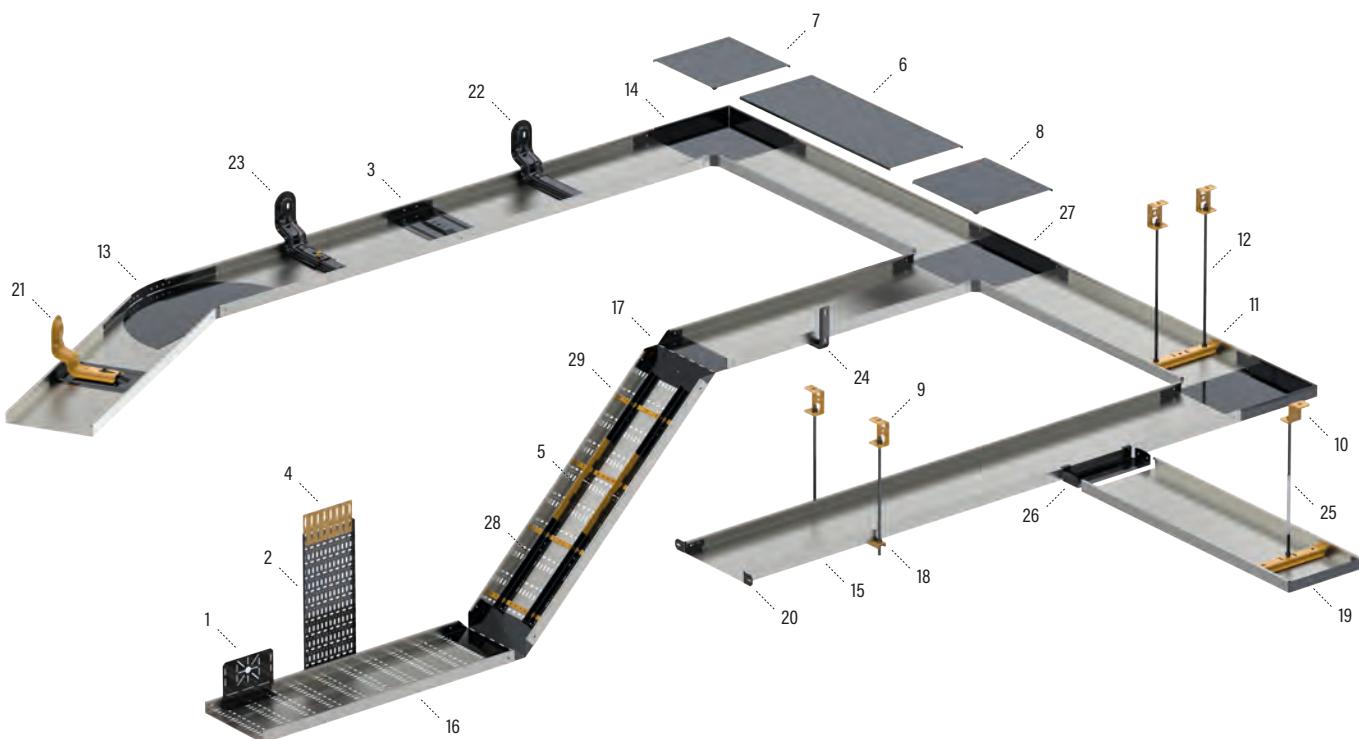

In an E90 fire rating compliant corner installation, corner piece RS90 must be supported at no further than 300 mm from both joints. Support can be done with gate support PRT. Gate support PRT must be attached to the ceiling with two threaded rods.

# Cable tray KRA

M PG

 MEKA®

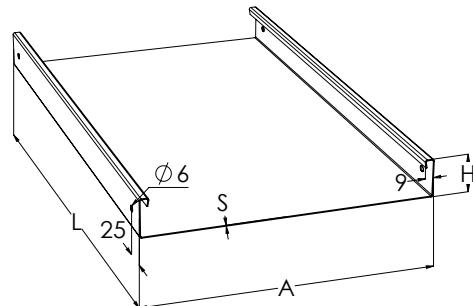

Cable trays, non-perforated, are used in places where cables have to be totally invisible and protected underneath. KRA-type trays are typically used in office- and commercial buildings, schools, hospitals and shopping centres, but also in warehouses, parking halls and industrial buildings.

To extend KRA cable trays joints RSS can be used. Joints RSS-40-100...500 have a special forming that allow to fasten these directly to wall or ceiling supports.

The products KRA-60-100...600 L=3000 are available by order in the atmospheric-corrosivity category C4.

Load test results for all widths are available on pages 2-10.

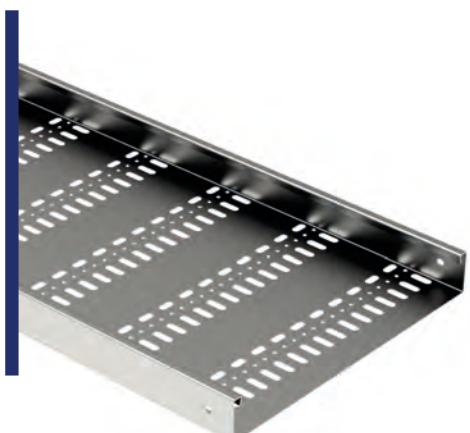

# Cable tray KRB

M PG

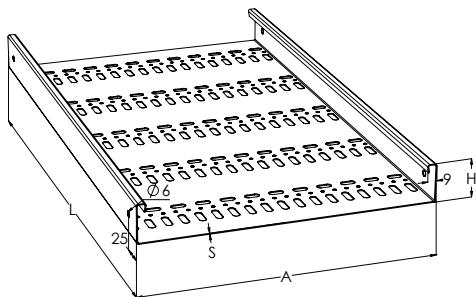

Perforated cable trays are used in places where cables have to be protected underneath. Perforation enhances airflow and cools the cables installed on the tray. KRB-type trays are typically used in office- and commercial buildings, schools, hospitals and shopping centres but also in warehouses, parking halls and industrial buildings.

To extend KRB cable trays joints RSS can be used. Joints RSS-40-100...500 have a special forming that allow to fasten these directly to wall or ceiling supports.

# Corner piece RS90

M PG

Corner pieces RS90 are used to make a 90° angles for KR-type cable trays. Jointing of RS90 corners to cable trays is fast and easy, because corners have joint slats already at place.

Product set includes bolts and nuts for fastening.

The corner piece RS90 is pushed inside the cable tray and attached with the included screw set.

# Adjustable corner piece SRS

M PG

 MEKA®

Adjustable corners SRS are used to make 0-75° horizontal angles for KR-type cable trays. Jointing of SRS corners to cable trays is fast and easy, because corners have joint slats already at place.

Product set includes bolts and nuts for fastening.

The adjustable corner piece SRS is pushed inside the cable tray and attached with the included screw set.

The range for adjustable corner piece SRS is 0-75°.

# T-branch bracket TKU

M PG

T-branch brackets TKU are used to make simple T- and X-junctions and corners from the side of KR-type cable trays. After installation edges of cable trays stay at the same level and brackets are practically invisible.

Product set includes bolts and nuts for fixing T-branch brackets to one cable tray end.

The T-branch bracket TKU is pushed inside the cable tray and attached with the included screw set.

# Gate support PRT

Universal gate supports PRT are used as gate or intermediate supports for mounting cable ladders, cable trays and wire mesh trays to ceiling. Depending on loading division and width of trays the mounting can be made by using one or two threaded rods GT. For fixing cable ladders to PRT supports two brackets KK are recommended to use, wire mesh trays can be fixed with WMT CL connector sets and cable trays with bolt sets RS 5, if needed.

1449974	x PRT-600 PG	0.56	650	20 PCE

PG Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 : Cl-C2

The cable ladder is attached to gate support PRT with bracket KK. Gate support PRT is attached to threaded rod GT-10 with nuts MU M10.

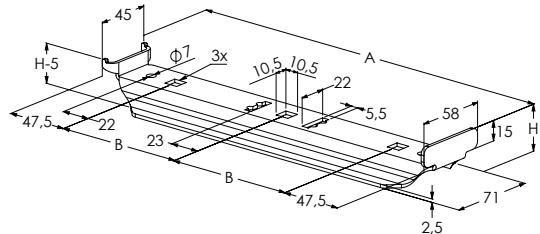

# Intermediate support RMK 10

M PG

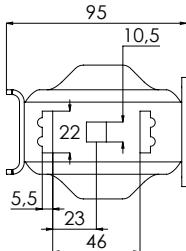

Intermediate supports RMK are used for supporting KR-type cable trays to ceiling by using threaded rods GT (one or two) or mounting rails PS. Fastening with two threaded rods (so-called gate support) is recommended for asymmetrical load of cables as well as for cable trays 400 mm and wider, especially when 8 mm threaded rods are used for hanging.

Supports RMK are placed inside of cable trays that allow a good-looking installation at places where the design is important.

PG Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 : C1-C2

Wall support RVK can be attached to the wall, mounting rail AS or ceiling supports HK1, HK2 and TP2.

Lift the edge of the cable tray on top of the straight end of the support. Press the other end of the cable tray in place from underneath and tighten the screw to lock it in.

Lift the edge of the cable tray on top of the straight end of the support. Press the other end of the cable tray in place from underneath.

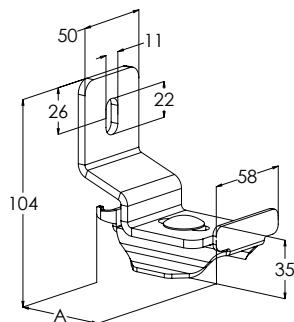

# Wall support SVK

M PG

Adjustable wall supports SVK are used for mounting 40 mm height KR-type cable trays to wall, mounting rails AS, ceiling supports HK1, HK2 and TP2 from the inner side of the cable trays. Supports SVK are placed inside of cable trays that allows a good-looking installation at places were the design is important. Adjusting range of SVK supports from wall is 4-45 mm.

## SVK 200-600

Wall support SVK can be attached to the wall, mounting rail AS or ceiling supports HK1, HK2 and TP2.

With wall support SVK, it is possible to adjust the gap between the cable tray and the wall by 4-45mm.

See the installation video.

# Wall support YPK

(M) (EG) (PG)

 MEKA®

Wall supports YPK are used for mounting wire mesh trays WMT and KR-type cable trays to wall. YPK supports are suitable especially at places with limited space under the trays.

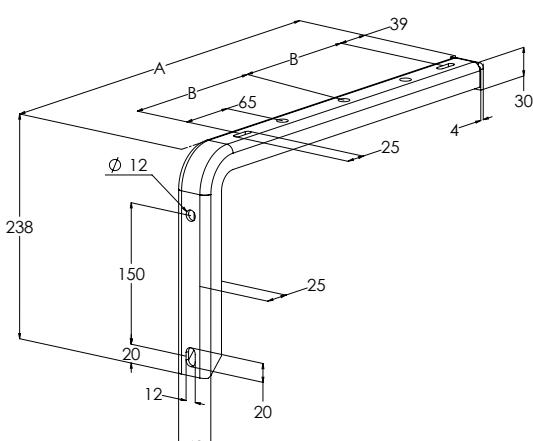

Please note!  
Fasteners are  
not included  
with the product.

## Ceiling bracket RTF-10

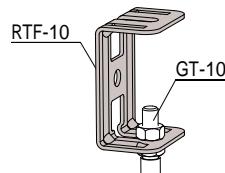

M PG

Ceiling brackets RTF are used for mounting threaded rods GT to ceiling. Brackets RTF enable the height adjustment up to 50 mm and reduce the transfer of possible vibrations to wedge anchors attached to the ceiling. Installation is convenient - threaded rod with nuts is inserted into the ceiling bracket, then height is adjusted and nuts tightened.

PG	Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 :C1-C2			

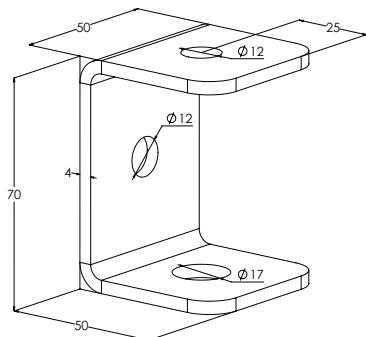

Ceiling bracket RTF-10 is attached to threaded rod GT-10 with nuts MU M10.

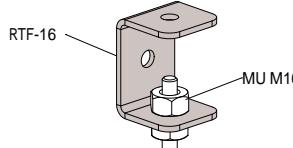

## Ceiling bracket RTF-16

M HDG

Ceiling brackets RTF are used for mounting threaded rods GT to ceiling. Brackets RTF enable the height adjustment up to 50 mm and reduce the transfer of possible vibrations to wedge anchors attached to the ceiling. Installation is convenient - threaded rod with nuts is inserted into the ceiling bracket, then height is adjusted and nuts tightened.

Ceiling bracket RTF-16 can be attached to threaded rod GT-10 or GT-16 with nuts MU M10 or MU M16.

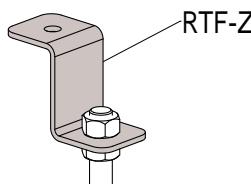

## Ceiling bracket RTF-Z

M HDG

Ceiling brackets RTF-Z are used for mounting threaded rods GT to ceiling. Brackets allow height adjustment up to 50 mm and horizontal adjustment up to 100 mm and reduce the transfer of possible vibrations to wedge anchors attached to the ceiling. Ceiling brackets RTF-Z have Ø12 mm and Ø17 mm holes for threaded rods.

## Mounting plate RDP

M PG

Mounting plates RDP are used for mounting junction boxes and other devices to KR-type cable trays as well as to MEK-type lighting supports rails. Mounting plates are attached to the edge of cable trays from the inside and fixed by bending the slats. For MEK, RDP plates are attached to the holes in the middle of the MEK profile with bolts and nuts. RDP plates have special perforation for fixing different kind of equipment including Keystone RJ45 jacks. The mounting plates can be twisted to hide it.

Devices mounted on the plates are clearly visible and easy to access later.

Mounting plate RDP is used as a mounting plate for appliances. The mounting plate locks in place under the edge of the cable tray. The mounting plate can be twisted to hide it at the weight-reduction holes.

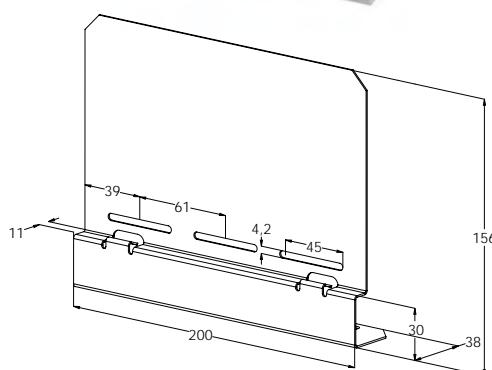

## Mounting plate RDP-O

M PG

Mounting plates RDP-O are used for mounting junction boxes and other devices to KR-type cable trays as well as to MEK-type lighting supports rails. Mounting plates are attached to the edge of cable trays from the inside and fixed by bending the slats. For MEK, RDP-O plates are attached to the holes in the middle of the MEK profile with bolts and nuts. RDP-O plates are without perforations and their mounting surface dimensions is 20x12 cm. The mounting plates can be twisted to hide it.

Devices mounted on the plates are clearly visible and easy to access later.

# Separation plate AP

(M) (PG)

 MEKA®

Separation plates AP are used to separate cables, especially low and high voltage cables, within cable ladders, cable trays and wire mesh trays.

AP plates can be fixed by using cable ties, bolts and nuts or screws. When separation plates are used inside non-perforated cable trays KRA then support plates APT can be used for fixing.

CODE	PRODUCT x = stock product	WGT. kg / pc	A mm	L mm	PACKAGE

PG Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 : C1-C2

The product AP-60 L=2000 is available by order in the atmospheric-corrosivity category C4.

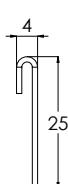

Separation plate AP is used to separate low and high voltage cables. Separation plate AP is attached to the cable ladder's intermediate cleat with a cable tie or screw.

## Joint APJ

(M) (PG)

Joints APJ are used to connect and hold ends of separation plates AP securely together. Joints are simply pushed onto AP plate ends without tools.

PG Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 : C1-C2

The product APJ-60 is available by order in the atmospheric-corrosivity category C4.

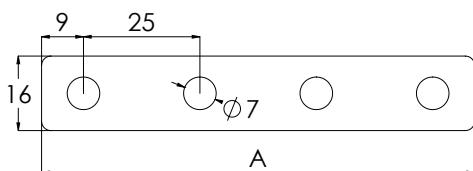

## Separation plate support APT

PG

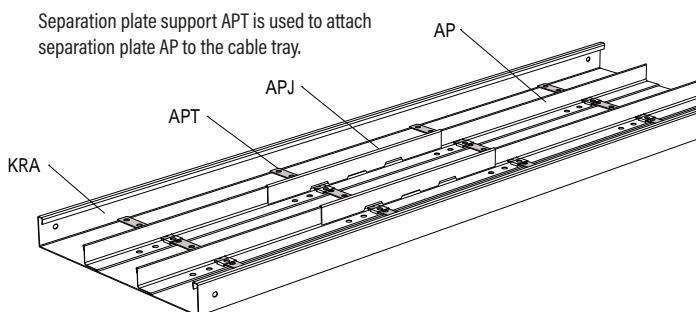

Separation plate supports APT are used to fix and keep at place separation plates AP inside of KR-type cable trays. APT supports are installed at the bottom of the cable trays, perpendicular to the AP plates. If necessary, bolts and nuts or cable ties can be used to attach the AP separation plates to the APT. Properly attached AP plates keep cables separated.

Cable Management Systems

Wire Mesh Trays  
**2023**

 Easy to modify, enabling optimal space usage.

 Snap in connectors speed up installation.

 Hygienic and safe.

 Bevelled wire ends on the sides protect cables from damage as well as construction workers from injury.

## WMT 30

**30 mm height wire mesh tray**  
70 kg/m (1 metre span)

Suitable for a wide range of applications, from offices to heavy industrial sites. Wire mesh trays are particularly good solutions for the food industry, ICT industry and renewable energy sites. Available for all atmospheric-corrosivity categories C1-CX.

## WMT 100

**100 mm height wire mesh tray**  
109 kg/m (1 metre span)

Suitable for a wide range of applications, from offices to heavy industrial sites. Wire mesh trays are particularly good solutions for the food industry, ICT industry and renewable energy sites. Available for all atmospheric-corrosivity categories C1-CX.

## WMT 50

**50 mm height wire mesh tray**  
94 kg/m (1 metre span)

Suitable for a wide range of applications, from offices to heavy industrial sites. Wire mesh trays are particularly good solutions for the food industry, ICT industry and renewable energy sites. Available for all atmospheric-corrosivity categories C1-CX.

## WMT 150

**150 mm height wire mesh tray**  
148 kg/m (1 metre span)

Suitable for a wide range of applications, from offices to heavy industrial sites. Wire mesh trays are particularly good solutions for the food industry, ICT industry and renewable energy sites. Available for all atmospheric-corrosivity categories C1-CX.

Wire mesh trays are available at 50-600 mm widths at 3 metre length.

Wire strength is 4 mm for 70-200 mm wide trays and 5 mm for 300-600 mm wide trays.

Load-carrying capacity of MEKA® wire mesh trays have been tested in compliance with IEC 61537 test type 3.

# Fire-resistant wire mesh trays

## Fire Rating E60

PRODUCT	SPAN LENGTH max (m)	WIDTH max (mm)	LOADING max (kg/m)
WMT	1,25	200	10

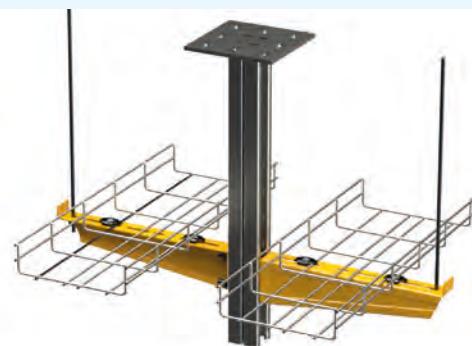

All lengths, and all material and surface treatment options up to a 200mm width.  
Edge heights 50, 100 and 150 mm.

TYPE	PRODUCTS	
Bends	WMT CL	All products and all material and surface treatment options. Corner installations are made as shown in the example with connector set WMT CL. Corners must be supported in the middle as well as no further than 300mm from both joints.
Brackets	WMT UC1, WMT UC1D, WMT CL1	All products and all material and surface treatment options.
Ceiling brackets	RTF-10, RTF-16, RTF-S, RTF-Z	All products and all material and surface treatment options. Fastening equipment that is rated for fire safety must be used with ceiling brackets.
Ceiling supports	TP1, TP2, TP2-L, TP2-P	All products and all material and surface treatment options. Fastening equipment size M10 that is rated for fire safety must be used with ceiling supports.
Connection plate	WMT UC1	All material and surface treatment options. Intermediate supports are done as shown in the example with connection plate WMT UC1, threaded rod GT-6 and MU M6 nuts.
Gate supports	TPK, PRT	All products and all material and surface treatment options. Gate supports must be attached to the ceiling with two threaded rods.
Joints	WMT CL, WMT SC1, WMT SC2, WMT UC	All products and all material and surface treatment options.
Mounting rails	AS, AS-WALL, FP	All products and all material and surface treatment options. Mounting rails must be attached to the wall. Fastening equipment that is rated for fire safety must be used with mounting rails.
Nuts	MU 6, MU 10, MU 16	All products and all material and surface treatment options. MU 6-nut is allowed only in tip attachments and intermediate support E60 with WMT UC1 as shown in examples.
Screw sets	RS1, RS2, RS3, RS4, RS KSF, RS SSU, RS VK2, RS MEK J 10	All products and all material and surface treatment options.
Separation plates	AP, SR	All products and all material and surface treatment options.
Sliding nut	SMT	All material and surface treatment options.
Threaded rods	GT-6, GT-10, GT-16	All products and all material and surface treatment options. GT-6 threaded rod is allowed only in tip attachments and E60 intermediate support with WMT UC1 as shown in examples. Other supports are not allowed by GT-6. Fire-rated fastening equipment is required when using threaded rods.
Wall supports	VK, VKF, VKZ, VKZ-N	All products and all material and surface treatment options. VKZ and VKZ-N must always be supported with a threaded rod from the support's tip to the ceiling. The tip attachment is required to achieve the E60 fire rating, if wall support VK or VKF is attached with a sliding nut SMT to mounting rail AS. In this case, a support that is wider than the wire mesh tray is required in order to attach the M6 threaded rod to the outermost hole. The tip attachment is not required to achieve the E60 fire rating, if VK or VKF are attached together through a ceiling support TP2 with a bolt. VK and VKF maybe attached to the wall directly with fire-rated fastening equipment, without the need for the tip to be attached. When a support is attached from the tip, the support must be wider than the wire mesh tray. Maximum allowed widths without tip-support are: VKF 600 mm and VK 500 mm. With a tip-support 100 mm wider wall support is accepted.

MEKA®

### Tip attachment E60

The tip attachment is required to achieve the E60 fire rating, if wall support VK or VKF is attached with a sliding nut SMT to mounting rail AS. In this case, a support that is wider than the wire mesh tray is required in order to attach the M6 threaded rod to the outermost hole.

The tip attachment is not required to achieve the E60 fire rating, if VK or VKF are attached together through a ceiling support TP2 with a bolt.

### Intermediate support E60

Intermediate supports that are compliant with the E60 fire rating are done as shown in the example with connection plate WMT UC1, threaded rod GT-6 and nut MU M6.

Intermediate supports that are compliant with the E60 fire rating are made with a wire mesh tray no wider than 100 mm.

### Gate support E60

Gate support PRT is used to create E60 compliant gate supports with two threaded rods. Threaded rod GT-10 is attached to the intermediate support with two MU M10 nuts.

## Installation of a corner E60

Fire rating E60 compliant 90° angles are achieved by cutting the wire mesh tray as shown in the example and joining the edges together with connector set WMT CL. The corner must be supported in the middle as well as no further than 300 mm on both sides of the corner.

## Snap in connector WMT SC1

EG HDG HST

 MEKA®

Snap in connectors WMT SC1 are used for fast extension of 70-200 mm wide and 50-150 mm height wire mesh trays. Installation on bottom of trays. Correctly installed connectors create a sufficient electrical conductivity, which eliminates the need to install a separate grounding wire between wire mesh trays.

Sales unit of WMT SC1 is package that includes 10 connectors.

Snap in connector WMT SC2 is compatible with wire mesh trays that are 70-200mm wide.

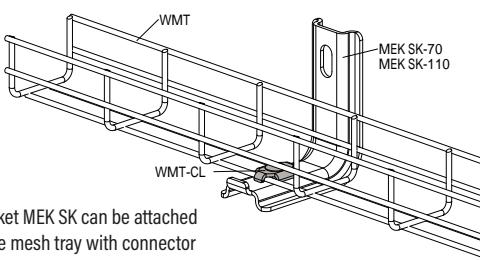

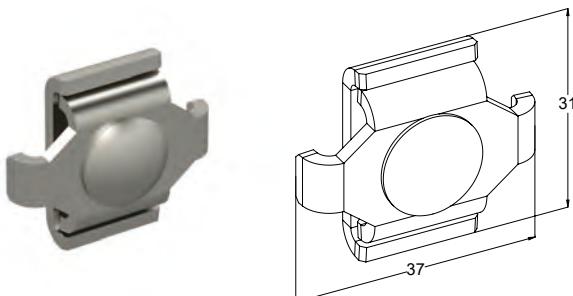

See the installation video.

## Connector set WMT CL

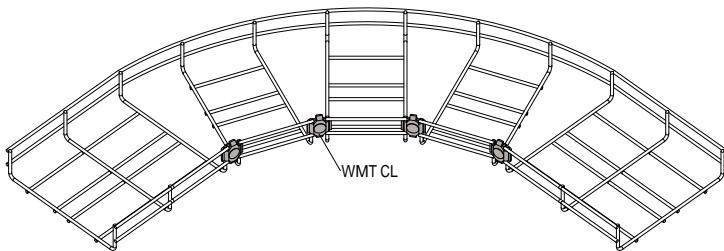

Connector sets WMT CL are used to extend wire mesh trays, attach trays to supports as well as make horizontal bends. Correctly installed joints create a sufficient electrical conductivity, which eliminates the need to install a separate grounding wire between wire mesh trays. Product set includes two plates, bolt and nut for fixing.

Sales unit of WMT CL is package that includes 20 product sets.

Wall bracket MEK SK can be attached to the wire mesh tray with connector set WMT CL.

90° bends can be formed with connector set WMT CL by cutting the wire mesh tray as shown in the image and joining the edges together.

HST	Manufactured of stainless steel in accordance with standard EN 10088 : C1-CX		

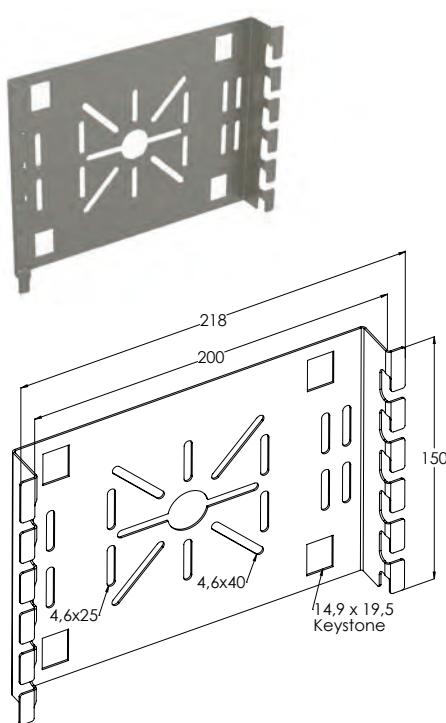

Connection plates WMT UC1D, WMT CL1 and screw set RS 4 can be used to make T-and X-junctions to the wire mesh trays or attach the tray to the wall, as shown in the images.

# Mounting plate WMT IP1

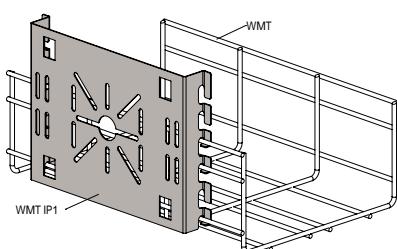

Mounting plates WMT IP1 are used for mounting junction boxes and other devices to wire mesh trays. Mounting plates can be fixed to wire mesh trays by bending plates' hooks around the trays' wires. The useful space of WMT IP plate is 20x15 cm.

Devices mounted on the plates are clearly visible and easy to access later.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1448730	x WMT IP1 PG	0.261	10 PCE

1448732	x WMT IP1 HST	0.267	10 PCE
HST	Manufactured of stainless steel in accordance with standard EN 10088 : C1-CX		

Mounting plate WMT IP1 can be attached to wire mesh trays with the plate's hooks. Bend the hooks into the wire.

## End plug WMT EP4 and WMT EP5

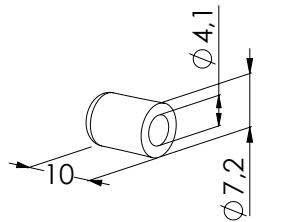

End plugs WMT EP are used to cover wire mesh trays wires' ends. Depending on WMT-tray's type the 4 or 5 mm diameter end plugs have to be selected.

End plugs are made of LDPE plastic, which is suitable for food and beverage applications. Orange colour plugs are visible in dim light that is important for security reason.

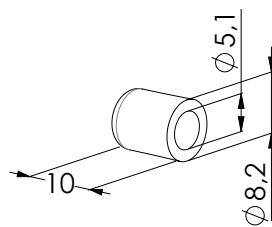

Sales unit of WMT EP is package that includes 100 end plugs.

WMT EP4

Press the plug on the ends of the cut wires.

## Earthing terminal PE

Earthing terminals PE are used to ground cable ladders, lighting support rails, cable trays and wire mesh trays at places where it is especially needed. PE terminal has ø9 mm hole for fixing the earthing wire.

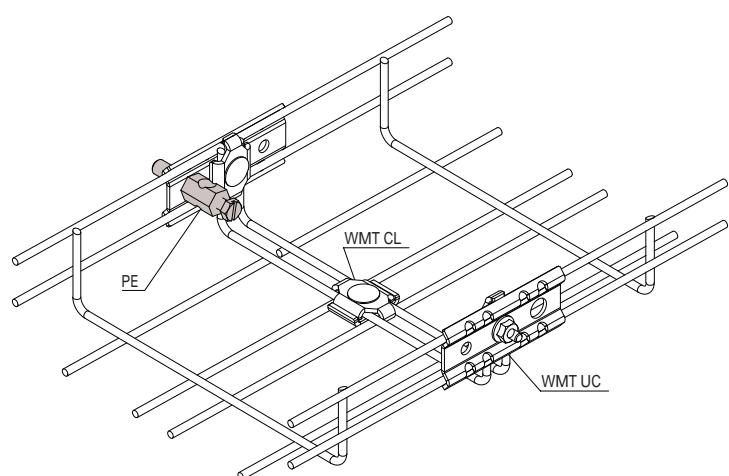

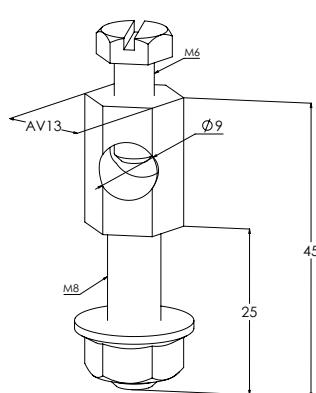

Mounting can be done easily into cable ladders' rungs or cable trays' perforation. Product set includes bolt and nut.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
------	------------------------------	-----------------	---------

1449799	x PE HDG	0.033	10 PCE
---------	----------	-------	--------

HDG : HDG or corresponding corrosion protection : C1-C4

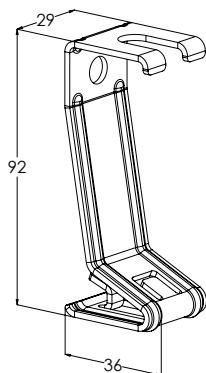

The earthing terminal is used to connect an earthing cable to the wire mesh tray's joints. Earthing screw PE is attached to the hole on connection set WMT UC.

## Intermediate support WMT CS

Intermediate supports WMT CS are used for mounting wire mesh trays to the ceiling with 10 mm threaded rods. If threaded rods are smaller then suitable washers and nuts have to be used. The adjustment range of WMT CS is ~50mm. Wire mesh trays can be fixed to supports by bending supports' hooks around the trays' wires. The safe working load of the WMT CS up to 30 kg.

Sales unit of WMT CS is package that includes 10 supports.

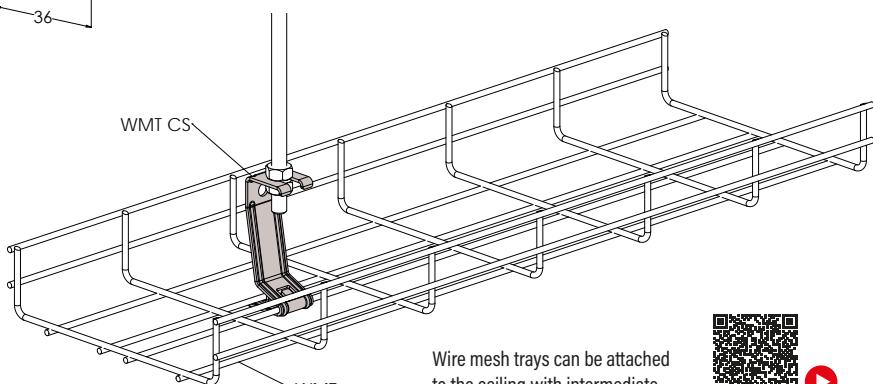

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE

Wire mesh trays can be attached to the wall or floor with wall bracket WMT WB1. Attach the wire mesh tray to the hooks on the bracket and bend the hooks into the wire.

## Wall bracket WMT WB2

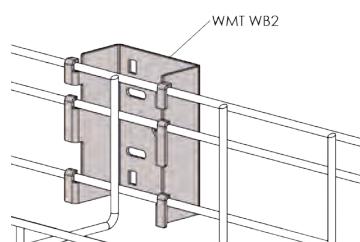

XPG

Wall brackets WMT WB2 are used for mounting wire mesh trays to wall or floor. Suitable for 100-600 mm width and 30-150 mm height trays. Wire mesh trays can be fixed to wall brackets by bending brackets' hooks around the trays' wires.

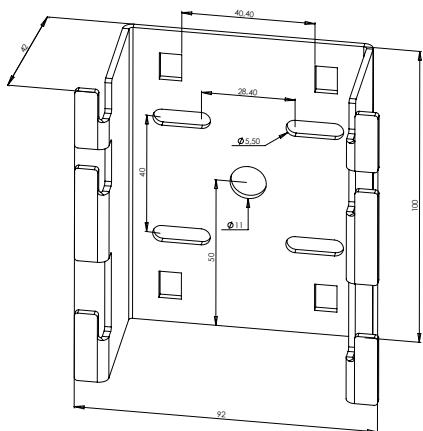

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
------	------------------------------	-----------------	---------

1448744	WMT WB2 XPG	0.232	10 PCE
XPG	Manufactured of coated steel in accordance with standard EN 10346 : C1-C4		

Wire mesh trays can be attached to the wall or floor with wall bracket WMT WB2. Attach the wire mesh tray to the hooks on the bracket and bend the hooks into the wire.

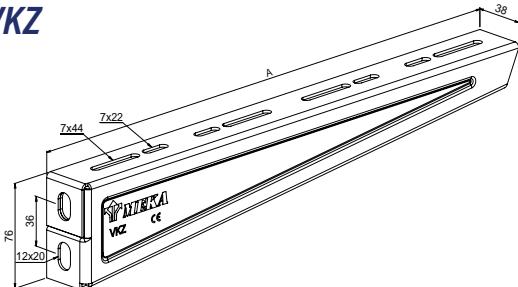

# Wall support VKZ

Wall supports VKZ are used for mounting cable ladders, cable trays and wire mesh trays directly to wall, AS-type mounting rails, HK- and TP2-type ceiling supports. For fastening to rails and supports sliding nuts SMT, TB and AKM and bolt sets RS can be used.

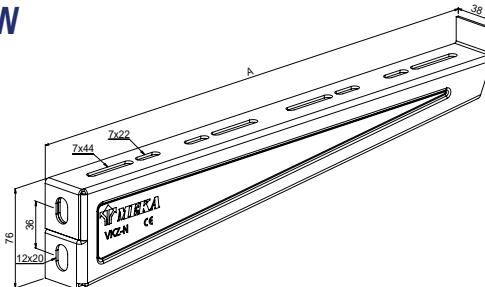

The safe working load of VKZ wall supports depends on type and is from 100 to 250 kg.

**VKZ**

The HST product differs in appearance from the PG and HDG products.

**VKZ-N**

The HST product differs in appearance from the PG and HDG products.

# Ceiling support TP2

HDG HST

**MEKA®**

Ceiling supports TP2 are used for mounting cable ladders, cable trays and wire mesh trays to ceiling or floor. Cable ladders and trays can be mounted on both sides of TP2 at various level by using VK-type wall supports and sliding nuts SMT, AKM, TB or bolt sets RS.

Note!  
The HST product  
differs in appearance  
from the HDG product.

---------	-------------	------	--------

PG Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 : C1-C2

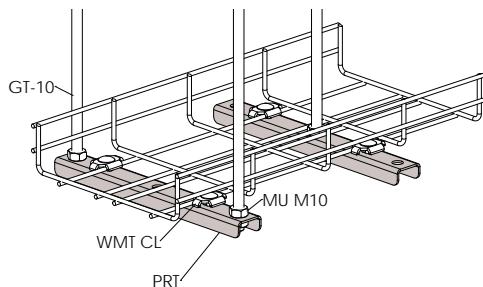

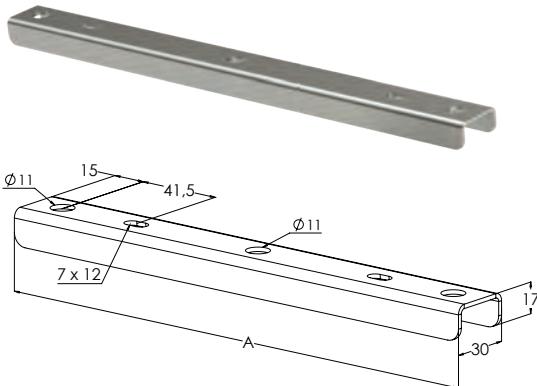

Gate support PRT is attached to ceiling bracket TFP 3 with threaded rod GT-10 and nuts MU M10.

## Gate support PRT

(PG) (XPG)

 MEKA®

Universal gate supports PRT are used as gate or intermediate supports for mounting cable ladders, cable trays and wire mesh trays to ceiling. Depending on loading division and width of trays the mounting can be made by using one or two threaded rods GT. For fixing cable ladders to PRT supports two brackets KK are recommended to use, wire mesh trays can be fixed with WMT CL connector sets and cable trays with bolt sets RS 5, if needed.

Wire mesh trays are attached to gate support PRT with bracket WMT CL or bracket CL1 and screw set RS 4.

Gate support PRT is attached to threaded rod GT-10 with nuts MU M10.

PG Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 : Cl-C2

Cable clamp CCB is used to attach cables to wire mesh trays.

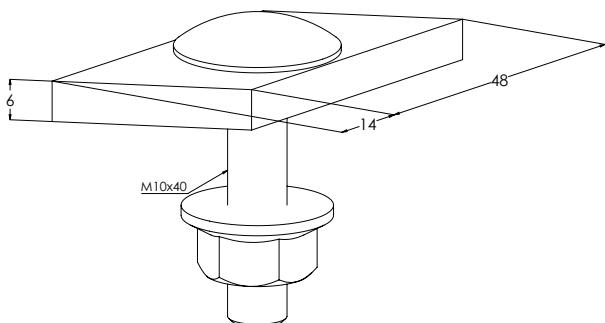

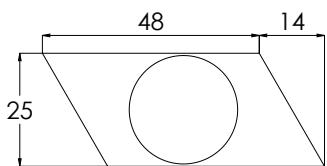

Note!  
Check the maximum allowed torque for cable clamp CCB from the chart above.

# Sliding nut SMT

 **MEKA®**

Sliding nuts SMT are used to fasten VK-type wall supports to mounting rails AS, ASR, ASR-L and ASR-P as well as to ceiling supports HK1, HK2, TP2, TP2-L and TP2-P. Using SMT nuts allow smooth adjustment of the height of supports and setting the cableways straight.

CODE	PRODUCT <small>x = stock product</small>	WGT. kg / pc	LOADING max. kg	PACKAGE
------	---	-----------------	--------------------	---------

1449684	 SMT HDG	0.096	800	10 PCE

## Lighting Support Rails

**2023**

Available for all atmospheric-corrosivity categories C1-CX.

Products in the MEK® family are compatible amongst themselves.

Thanks to their dovetail profile, MEK® lighting support rails are sufficiently load-bearing and easy to install.

## Lighting Support Rails

### MEK 70 S

#### Lightweight lighting support rail

27 kg/m (2 metre span)

MEK 70 S is lightweight, easy to install, and suited to a variety of lighting installations. Typically used in office and commercial buildings, shopping centres, schools and car parks. System parts are compatible with MEK 70 and MEK 70 K systems.

### MEK 70 K

#### Lighting support rail for medium-weight loads

44 kg/m (2 metre span)

MEK 70 K lighting support rail is suited to a wide variety of lighting installations. Typically used in office and commercial buildings, shopping centres, schools and car parks. System parts are compatible with MEK 70 and MEK 70 S systems.

### MEK 70

#### Load-bearing lighting support rail

92 kg/m (2 metre span)

MEK 70 lighting support rail is suited to a variety of demanding lighting installations. Typically used in office and commercial buildings, shopping centres, schools and car parks. System parts are compatible with MEK 70 S and MEK 70 K systems.

### MEK 110

#### Wide, load-bearing lighting support rail

67 kg/m (2 metre span)

MEK 110 lighting support rail is suited to a variety of demanding lighting installations. Typically used in office and commercial buildings, shopping centres, schools and car parks.

### AluMEK

#### Lightweight and rigid aluminium lighting support rail

Applicable uses include office and commercial buildings, shopping centres and schools.

Lighting support rails are available at 70 mm and 110 mm widths and at 3 or 6 metre length.

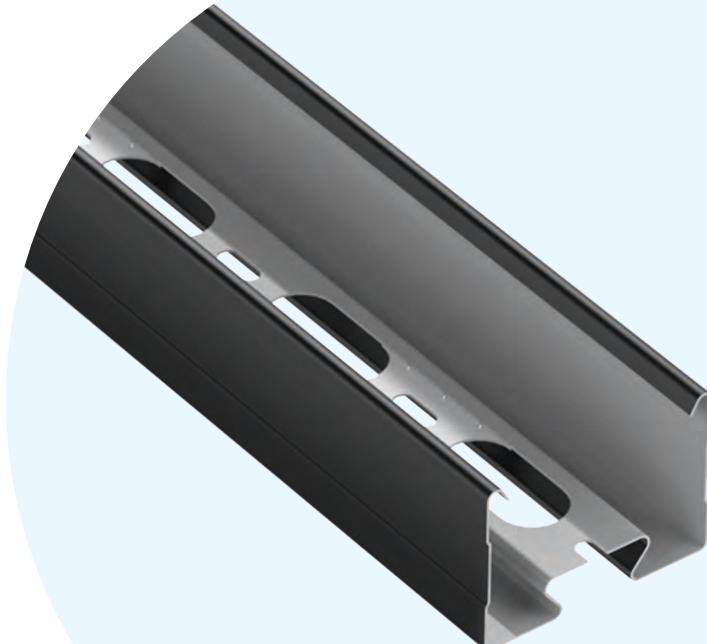

Painted lighting support rails gloss level is 35. Painted lighting support rails are delivered with a protective plastic film.

Load-bearing capacity of MEKA® lighting support rails have been tested in compliance with IEC 61537 test type 3.

# Fire-resistant lighting support rails

## Fire Rating E60

PRODUCT	SPAN LENGTH max (m)	WIDTH max (mm)	LOADING max (kg/m)
MEK 110	1,25	110	5
MEK 70	1,25	70	5
MEK 70 K	1,25	70	5
MEK 70 S	1,25	70	5

All lengths, and material and surface treatment options.

TYPE	PRODUCTS	
Ceiling brackets	RTF-10, RTF-16, RTF-S, RTF-Z	All products and all material and surface treatment options. Fastening equipment that is rated for fire safety must be used with ceiling brackets.
Corner piece	MEK KR	All surface treatment options. Corner piece is not allowed to be used as a support. Corners must be supported at no further than 300 mm from both corner pieces. Corner piece MEK KR is not required for E60 fire rating compliance in the corner installation, but it can be used in a fire-resistant installation.
Intermediate supports	MEK RK	All material and surface treatment options. Fire-rated fastening equipment is required when using threaded rods.
Joints	MEK J	All material and surface treatment options.
Nuts	MU 10, MU 16	All products and all material and surface treatment options.
Screw sets	RS1, RS2, RS3, RS4, RS KSF, RS SSU, RS VK2, RS MEK J 10	All products and all material and surface treatment options.
Threaded rods	GT-6, GT-10, GT-16	All products and all material and surface treatment options. GT-6 threaded rod is allowed only in tip attachments, not in supports. Fire-rated fastening equipment is required when using threaded rods.
Wall support	MEK SK-70	For MEK 70 only. All material and surface treatment options.

## Suspension support E60

MEK lighting support rails are suspended in an E60 fire rating compliant manner with intermediate support MEK RK. The intermediate support is suspended from the ceiling with a threaded rod.

## Corner E60

In an E60 fire rating compliant corner installation, the corner must be supported at no further than 300 mm from both joints. The corner piece MEK KR is not required for E60 fire rating compliance in the corner installation, but it can be used in a fire-resistant installation.

## Wall support E60

In an E60 fire rating compliant installation, MEK SK-70 is attached to the wall directly with fire-rated fastening equipment.

# Potential Equalisation

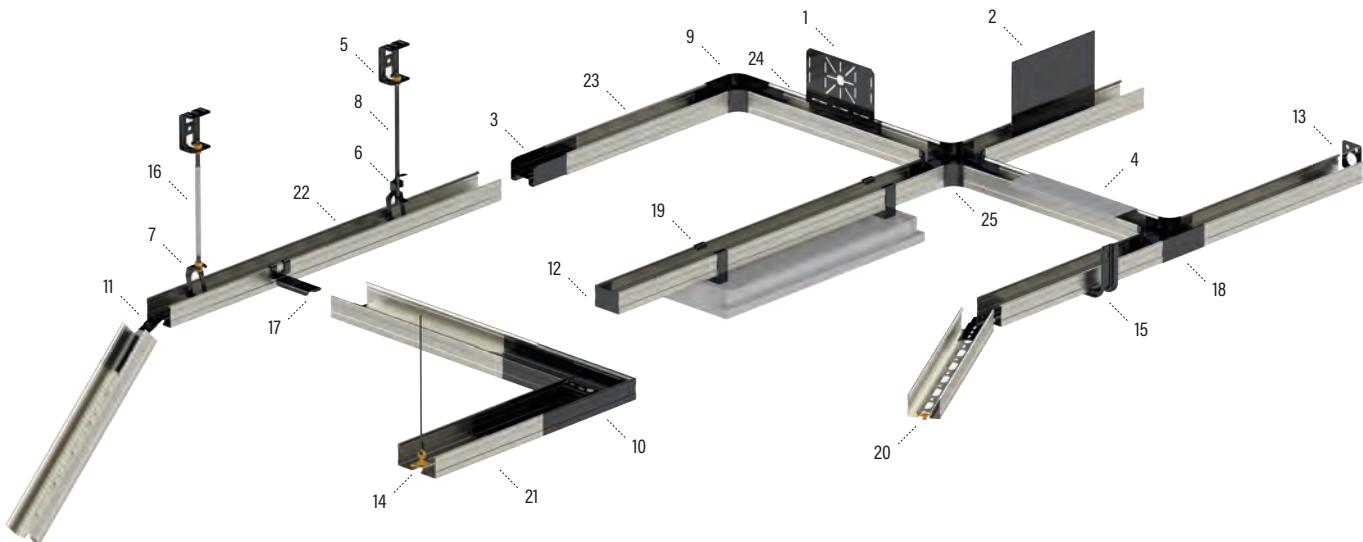

IEC 61537

PRODUCT	IMPEDANCE mΩ/m
MEK 70 S	≤1,22
MEK 70 M / MEK 70 K PG / MEK 70 K XPG	≤0,9
MEK 70 PG	≤0,8
MEK 110 PG / M	≤0,58
ALUMEK 50	≤0,16
ALUMEK 50 M	≤0,18

PRODUCT + JOINT measured 50mm from the joint	IMPEDANCE mΩ
MEK 70 S PG + MEK J-70PG	≤0,5
MEK 70 K PG + MEK J PG	≤0,39
MEK 70 K XPG + MEK J PG	≤0,39
MEK 70 M + MEK J-70 PG	≤0,51
MEK 70 M + MEK NL PG	≤1,34
MEK 70 PG + MEK J-70 PG	≤0,44
MEK 110 M + MEK J-110 PG	≤0,34
MEK 110 M + MEK NL PG	≤0,32
ALUMEK 50 + ALUMEK J	≤0,06
ALUMEK 50 M + ALUMEK J	≤0,1

The joints in the chart create a sufficient electrical joint, which eliminates the need to install a separate grounding wire between rails.

# Lighting support rail MEK® 70 S

M PG

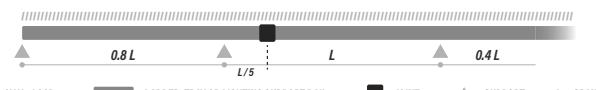

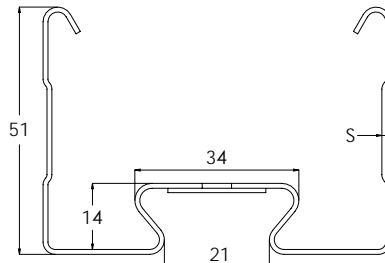

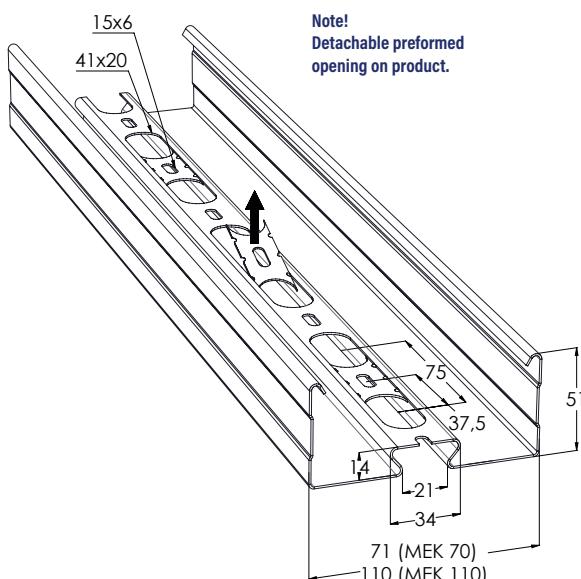

Lighting support rails MEK 70 S are used for installation of luminaries, cables and other devices in shopping centres, schools, office- and commercial buildings, parking halls as well as in industrial buildings. Unique MEK profile allows longer spans that save time for mounting and reduce costs for installation accessories. For fixing luminaries to rails brackets MEK AH, sliding nuts MEK-VM or nut sets MEK VM-L can be used.

MEK 70 S are suitable for lower and medium loading capacities.

## Corner piece MEK® KR

Plastic corner pieces MEK KR are used to make 90° angles for MEK 70-type lighting support rails in indoor mounting. Corners MEK KR have integrated joint parts that allows easily to push corners into lighting support rails. Connections can be fastened with screws or rivets, if necessary. Corners MEK KR cannot be used as lighting rails' supports.

**Note!**  
Plastic products must  
not be used for support.

End bracket MEK PK is used when the end of a lighting support rail is attached to a wall. Suited for all MEK® and AluMEK lighting support rails.

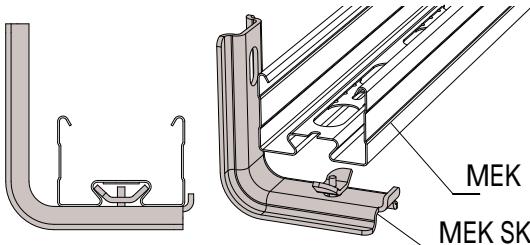

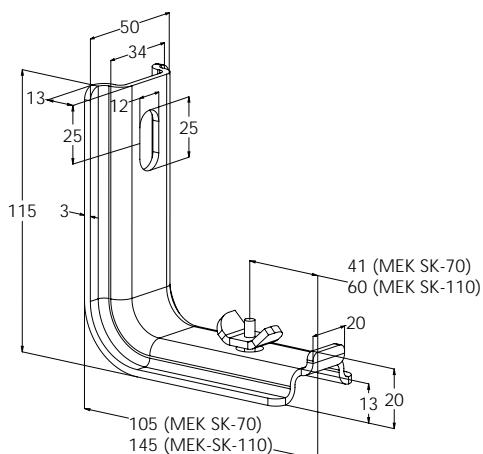

# Wall support MEK® SK

M PG

Wall supports MEK SK are used for mounting MEK-type lighting support rails and wire mesh trays WMT to wall. Product set includes bolt and nut for fixing lighting supports rails to wall supports, but for mounting wire mesh trays connectors WMT CL can be ordered separately.

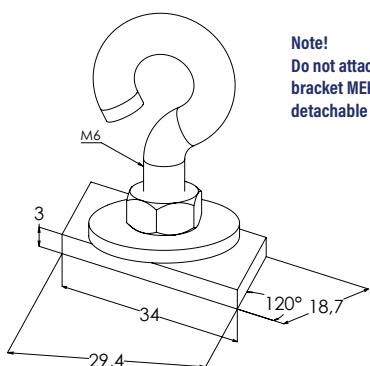

The fastener on the lighting support rail is turned sideways in the fishtail groove respective to the lighting support rail, and the screw is tightened.

# Suspension bracket MEK® VR

PG

Suspension brackets MEK VR are used for hanging MEK-type lighting support rails from wires, mainly when threaded rods cannot be used due to ceiling or roof structure. The safe work load of MEK VR is 50 kg.

NB! The suspension brackets must not be fixed to the knock-out parts of the MEK lighting rail's profile.

Suspension bracket MEK VR is used for attaching suspension wires to the lighting support rail. MEK VR can be installed either to intermediate support MEK RK, or directly to the lighting support rail.

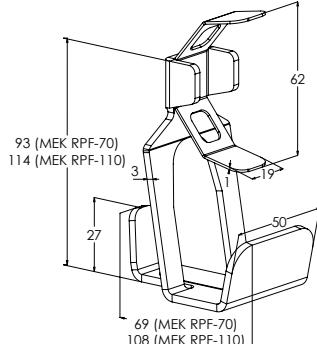

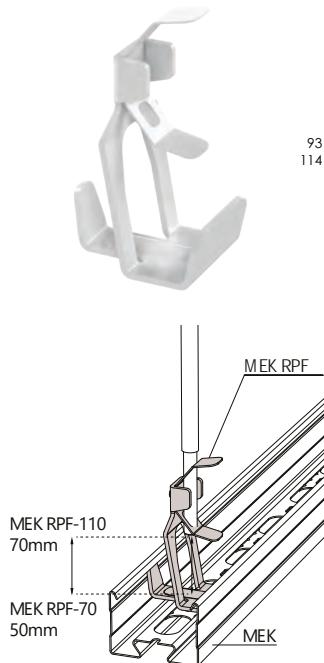

# Adjustable intermediate support MEK® RPF

M PG

 MEKA®

Adjustable intermediate supports MEK RPF are used to support MEK-type lighting support rails into ceiling from inside with 8 or 10 mm threaded rods GT. When using MEK RPF the height adjustment of all MEK line is fast and easy by bending with fingers MEK RPF brackets' spring plates and fixing the bracket at the suitable level. The adjustment range is 50 mm (MEK RPF-70) or 70 mm (MEK RPF-110).

Safe work load of MEK RPF supports are 50 kg (MEK RPF-70) and 60 kg (MEK RPF-110).

The RPF suspension is quick to install and adjustable. The threaded rod is attached to the ceiling with ceiling bracket RTF-10. Mount the lighting support rail on the intermediate support.

See the installation video.

## Intermediate support MEK® RK

M PG XPG HST

Intermediate supports MEK RK are used to support MEK-type lighting support rails into ceiling from inside. For installation are also needed threaded rods GT and nuts. When using MEK RK the height adjustment of all MEK line is fast and easy by turning and fixing nuts at the suitable level. The adjustment range is 65 mm.

Safe work load of MEK RK supports are 50 kg (MEK RK-70) and 60 kg (MEK RK-110).

Note!  
HDG products available  
on special order.

MEK RK is attached to threaded rod GT10 with two M10 nuts. The threaded rod is attached to the ceiling with ceiling bracket RTF-10. Mount the lighting support rail on the intermediate support.

See the installation video.

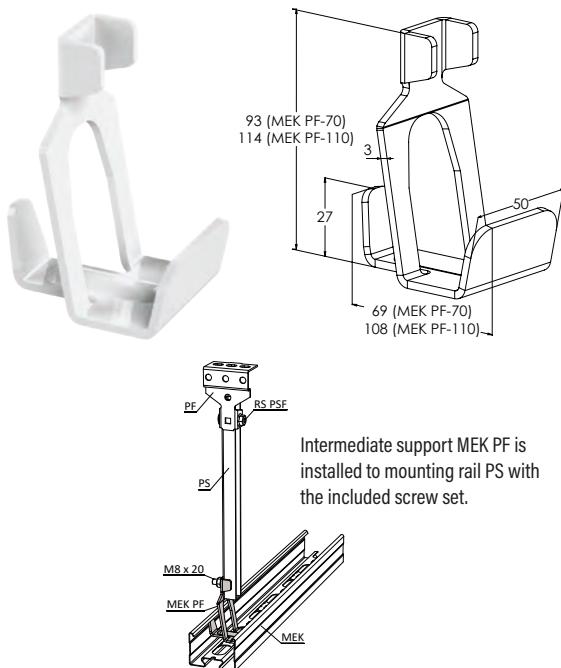

## Intermediate support MEK® PF

(M) (PG)

**MEKA®**

Intermediate supports MEK PF are used to support MEK-type lighting support rails into ceiling from the inner space with mounting rails PS. By using this type of mounting suspensions are more stronger and stable compared for mounting with threaded rods. It is useful especially in higher and/or asymmetrical loadings.

Product set includes bolt and nut for fixing MEK PF into PS-rails.

Adjustable joint MEK NL can be used to form horizontal flexible joints between two lighting support rails.

Adjustable joint MEK NL can be bent to form vertical flexible joints between two lighting support rails

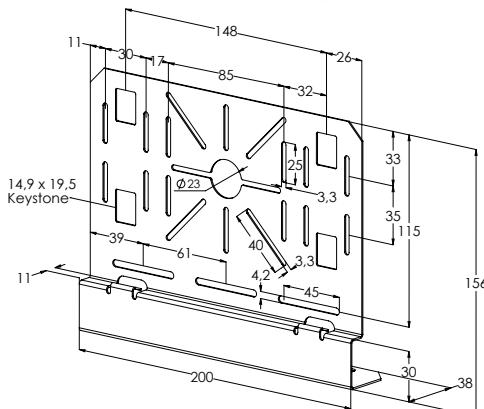

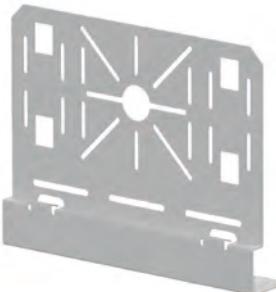

## Mounting plate RDP

M PG XPG

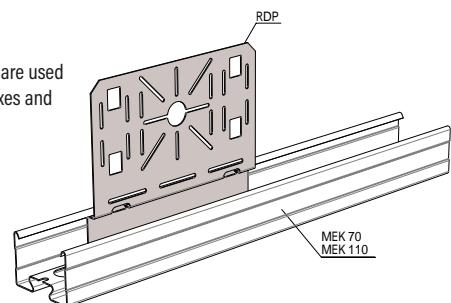

**MEKA®**

Mounting plates RDP are used for mounting junction boxes and other devices to KR-type cable trays as well as to MEK-type lighting supports rails. Mounting plates are attached to the edge of cable trays from the inside and fixed by bending the slats. For MEK, RDP plates are attached to the holes in the middle of the MEK profile with bolts and nuts. RDP plates have special perforation for fixing different kind of equipment including Keystone RJ45 jacks. The mounting plates can be twisted to hide it.

Devices mounted on the plates are clearly visible and easy to access later.

## Mounting plate RDP-O

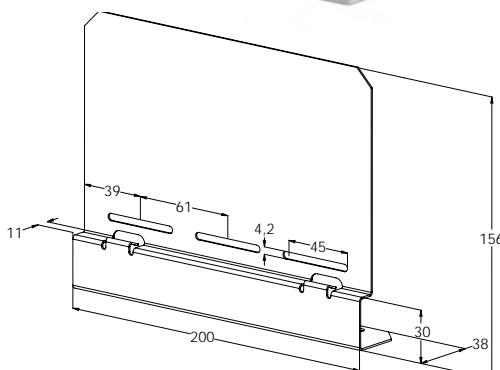

M PG XPG HST

Mounting plates RDP-O are used for mounting junction boxes and other devices to KR-type cable trays as well as to MEK-type lighting supports rails. Mounting plates are attached to the edge of cable trays from the inside and fixed by bending the slats. For MEK, RDP-O plates are attached to the holes in the middle of the MEK profile with bolts and nuts. RDP-O plates are without perforations and their mounting surface dimensions is 20x12 cm. The mounting plates can be twisted to hide it.

Devices mounted on the plates are clearly visible and easy to access later.

Mounting plates RDP are used to mount junction boxes and other devices.

## Mounting plate MEK® KL

Plastic mounting plates MEK KL MU are used for mounting junction boxes and other devices to MEK-type lighting supports rails. Mounting plates are attached to the holes in the middle of the MEK profile with bolts and nuts. The mounting surface dimensions of MEK KL MU is approx. 26x18 cm.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1449393	x MEK KL MU	0.18	10 PCE
Grey plastic			

Mounting plate MEK KL MU is used, when junction boxes need to be insulated from the conductive base plate.

## Lighting fixture MEK® VM

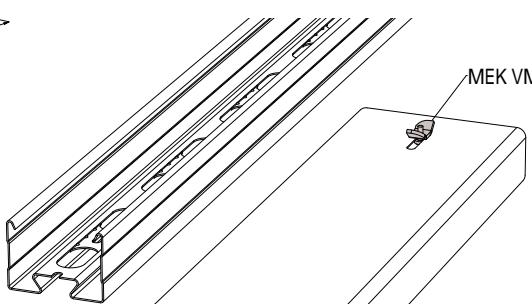

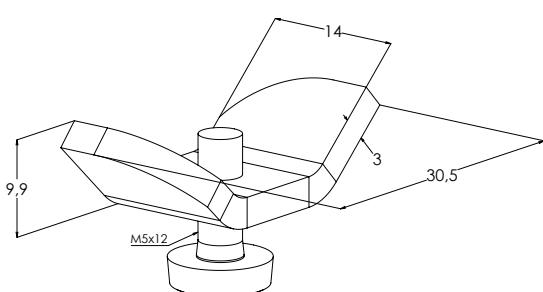

Lighting fixtures MEK VM are used for mounting luminaires and other devices to MEK-type lighting support rails. Installation: two MEK VM shall be fixed to the luminaire, then the luminaire lifted to a suitable location in the MEK lighting rail and fixed into dovetail groove with "one hand and a half turn" - fast and easy. It is also possible to move the luminaires along the lighting rail steplessly later. The safe work load of MEK VM is 40 kg.

CODE	PRODUCT x = stock product	WGT. kg / pc	LOADING max. kg	PACKAGE
1449355	x MEK VM PG	0.013	40	100 PCE
PG	Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 : C1-C2

1430587	x HST MEK VM	0.013	40	100 PCE
HST	Manufactured of stainless steel in accordance with standard EN 10088 :C1-CX			

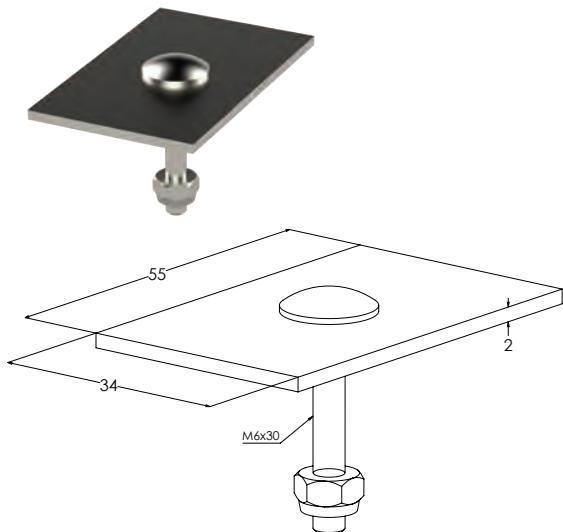

Lighting fixture MEK VM is installed into the fishtail groove of the lighting support rail parallel to the rail. By turning the screw MEK VM locks in to the groove.

# Lighting fixture MEK® VM-L

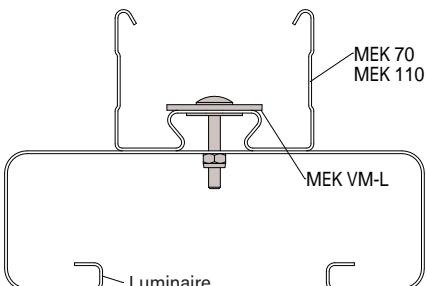

PG

Lighting fixtures MEK VM-L are used for mounting luminaires and other devices to MEK-type lighting support rails, especially when luminaires may be subject to vibration. MEK VM-L product set includes bolt, locking nut and washer. Installation: bolts are pushed through lighting support rail holes and luminaries attached with locking nuts. The safe work load of MEK VM-L is 60 kg.

CODE	PRODUCT x = stock product	WGT. kg / pc	LOADING max. kg	PACKAGE
1449354	x MEK VM-L PG	0.037	60	100 PCE
PG	Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 : C1-C2			

Lighting fixture MEK VM-L is recommended for sites, where the luminaires may be exposed to vibration. Lighting fixture MEK VM-L consists of a locking screw, locking nut and a plate. The locking screw is inserted in the lighting support rail's holes and the light is fastened with the locking nut.

# Lighting bracket MEK® AH

M PG XPG

Lighting brackets MEK AH are used for mounting luminaires and other devices to MEK-type lighting support rails. Installation: brackets shall be fixed to the luminaire, then lifted into place with the upper edges of brackets slightly bent apart and fixed to MEK-rail by bending slats at the bottom. It is also possible to move the luminaires along the lighting rail steplessly later. The load capacity of the MEK AH mounting brackets is 10 kg.

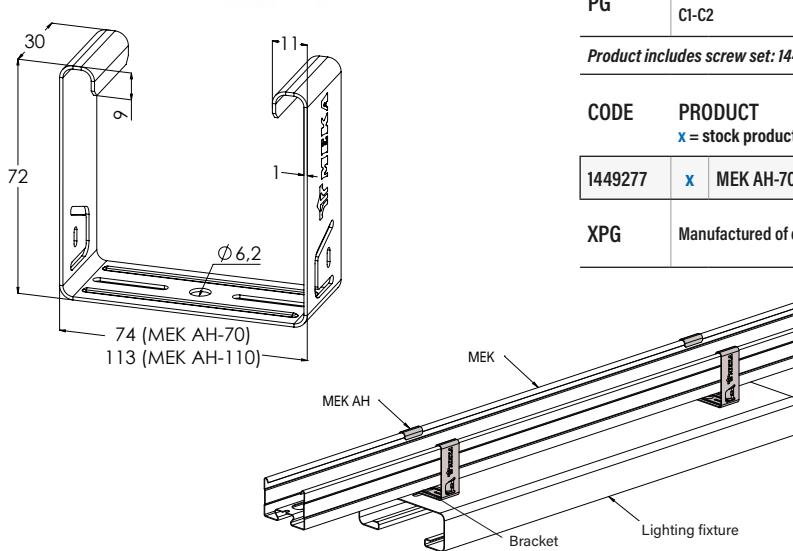

CODE	PRODUCT x = stock product	WGT. kg / pc	LOADING max. kg	PACKAGE
1431764	x MEK AH-70 M	0.074	10	10 PCE

PG	Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 : C1-C2			

Product includes screw set: 1449108 RS MEK J 10 EG (1 PCE)

CODE	PRODUCT x = stock product	WGT. kg / pc	LOADING max. kg	PACKAGE
1449277	x MEK AH-70 XPG	0.072	10	10 PCE
XPG	Manufactured of coated steel in accordance with standard EN 10346 : C1-C2			

Lighting bracket MEK AH is attached to the light's body with a screw set RS MEK J 10. MEK AH is attached to the lighting support rail by pressing. The lighting bracket can be locked in place by twisting the locking flanges flush with the bracket.

See the installation video.

# Ceiling bracket RTF-10

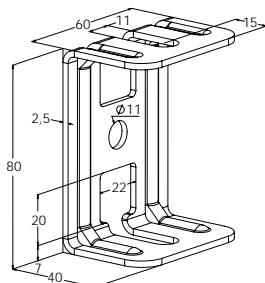

Ceiling brackets RTF are used for mounting threaded rods GT to ceiling. Brackets RTF enable the height adjustment up to 50 mm and reduce the transfer of possible vibrations to wedge anchors attached to the ceiling. Installation is convenient - threaded rod with nuts is inserted into the ceiling bracket, then height is adjusted and nuts tightened.

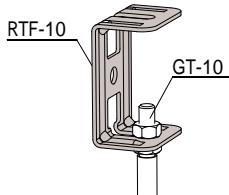

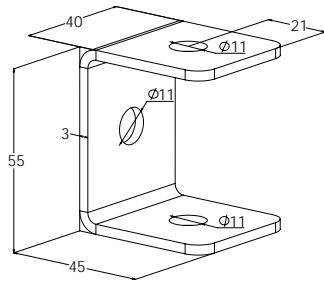

**Note!**  
The HST product differs  
in appearance to the  
PG, M and HDG products

## M, PG and HDG

# Lighting support rail ALUMEK

M AL

Lighting support rails ALUMEK are used for installation of luminaries, cables and other devices at places that require a clean and finished look. Applicable uses include office and commercial buildings, shopping centres and schools.

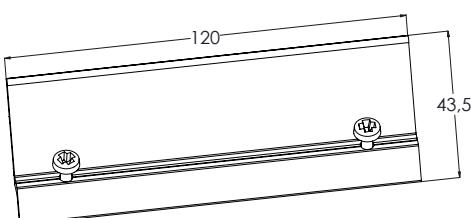

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1429170	ALUMEK 50 L=6000 M	3.74	1 PCE / 6 MTR
M	White RAL 9010 polyester paint coating : C1-C2		

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1429171	ALUMEK 50 L=6000	3.6	1 PCE / 6 MTR
AL	Manufactured of extruded aluminium alloy : C1-C2		

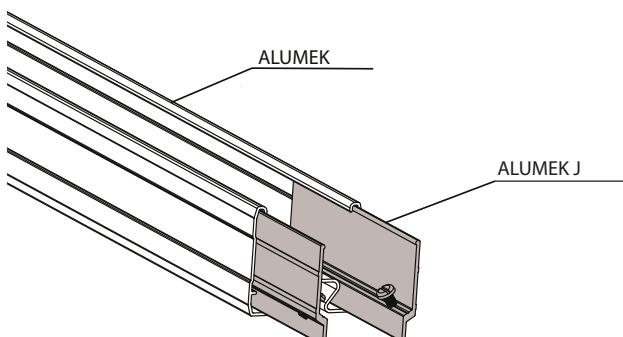

## Joint ALUMEK J

AL

Joints ALUMEK J are used to extend ALUMEK lighting supports rails. Product set includes bolts for fastening.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1429174	ALUMEK J	0.04	10 PCE / 1 BG
AL	Manufactured of extruded aluminium alloy : C1-C2		

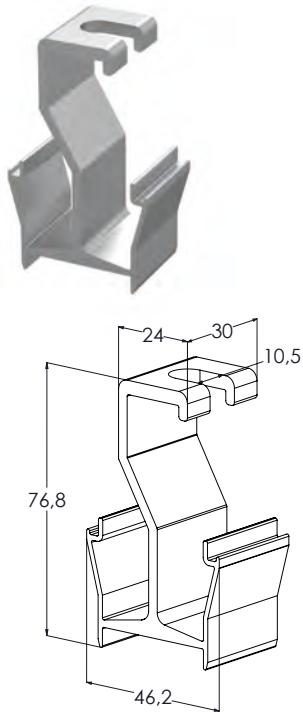

Joint AluMEK J is slided inside the light support rail on both edges and tighten with screws. Two AluMEK J joints are required to form a joint.

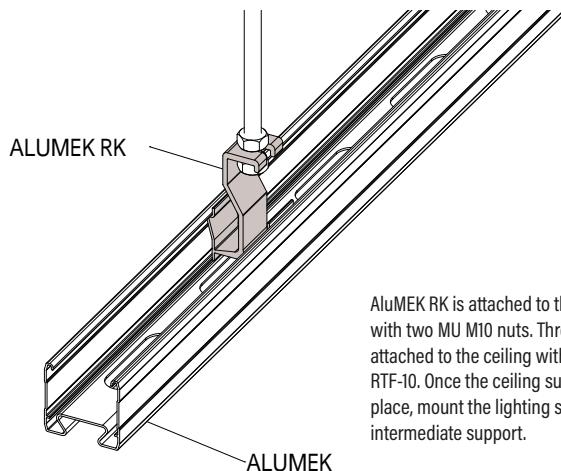

## Intermediate support ALUMEK RK

Intermediate supports ALUMEK RK are used to support ALUMEK-type lighting support rails into ceiling from inside. For installation are also needed threaded rods GT and nuts. When using ALUMEK RK the height adjustment of all ALUMEK line is fast and easy by turning and fixing nuts at the suitable level. The adjustment range is approx. 20 mm.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1429175	ALUMEK RK	0.04	10 PCE / 1 BG
AL	Manufactured of extruded aluminium alloy : C1-C2		

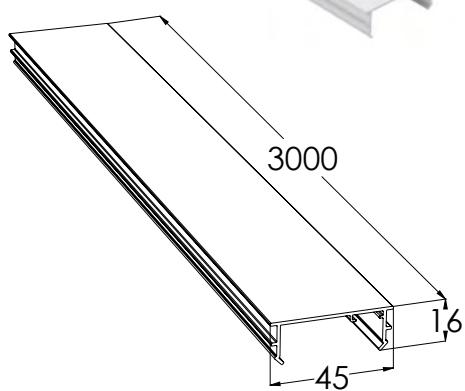

AluMEK RK is attached to the threaded rod with two MU M10 nuts. Threaded rod attached to the ceiling with ceiling bracket RTF-10. Once the ceiling suspension is in place, mount the lighting support rail on the intermediate support.

## Cover ALUMEK KA

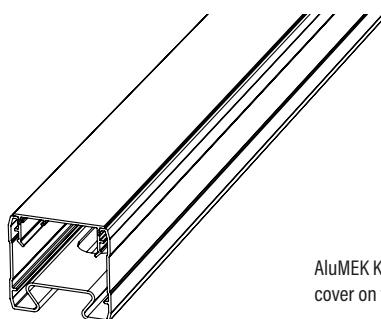

Covers ALUMEK KA are used to protect the cables from damage, dirt and UV radiation as well as to finish the installation. ALUMEK covers can be installed by pressing these into lighting support rails from top.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1429461	ALUMEK KA-45 L=3000 M	0.82	1 PCE / 3 MTR

# Cable trunking installation instructions

**MEKA**  
**Instal**

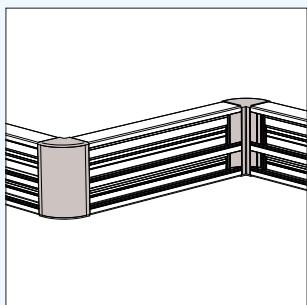

**Cable trunking cover installation**  
Cable trunking covers lock in place when pressed on the fixture opening.

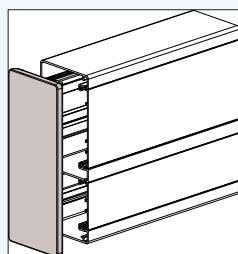

## Joint installation

Joints are installed to grooves inside cable trunking base and locked by included screws. Two joints are required to form a joint.

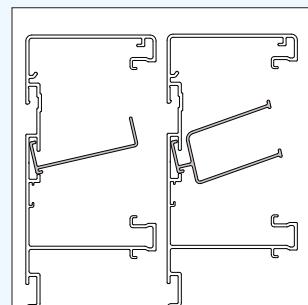

## Corner piece installation

Cable trunking base is pushed inside the corner piece, after which it can be extended with another cable trunking base from the other side of the corner piece.

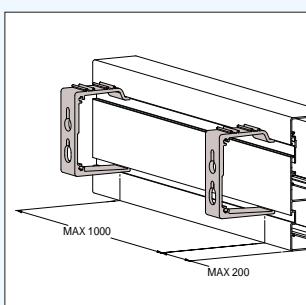

## End plate installation

End plates are installed by pressing them on the cable trunking.

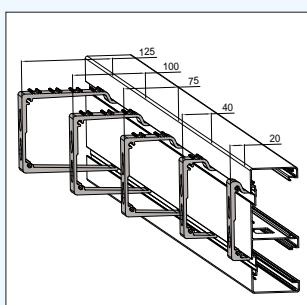

**Cable shelf installation**  
Cable shelves are installed by locking them to the cable trunking base's groove as shown in the image.

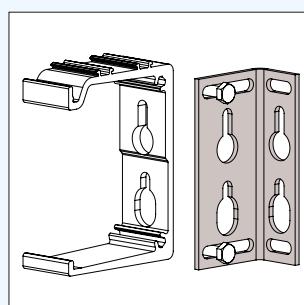

## Wall bracket installation

The cable trunking base is suspended on the wall bracket's hooks from the grooves in cable trunking base.

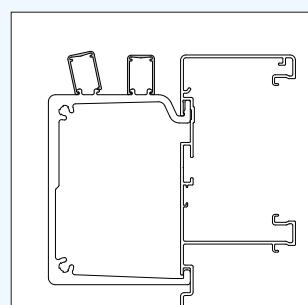

## Wall bracket sizes

There are five different sizes of the wall bracket. Cable trunking can be installed 20-125 mm from the wall depending on the selected bracket size.

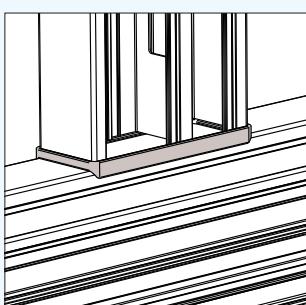

## Adjusting piece installation

Adjusting piece is installed to the wall bracket as shown in the image. Adjusting range 0-24 mm.

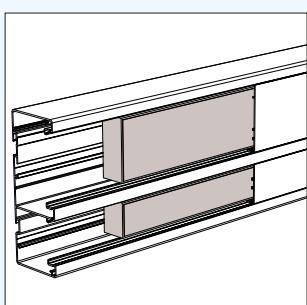

## Decorative rib installation

Decorative ribs are installed to the wall bracket as shown in the image. Decorative ribs are used to close the gap between the cable trunking and wall without blocking air flow.

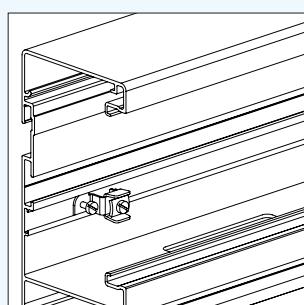

## Trunking collar installation

Trunking collars are installed in the joints of a horizontal and a vertical cable trunking.

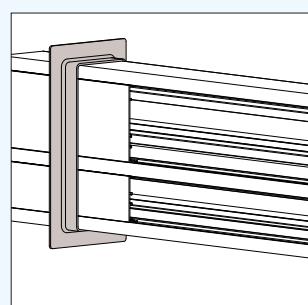

## Sound isolation piece installation

Sound isolation pieces are installed inside the cable trunking under the cover.

## Earthing coupler installation

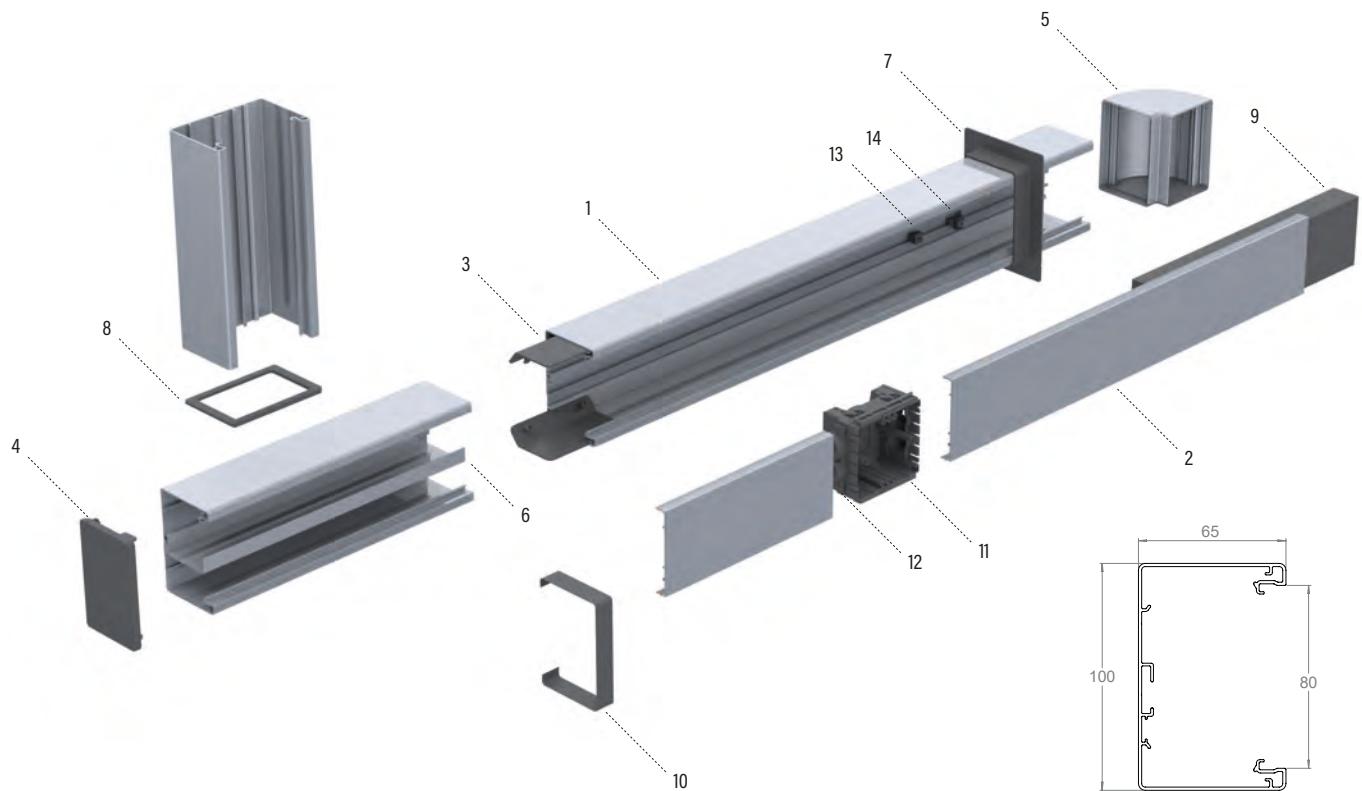

The earthing coupler is installed to the groove inside the cable trunking base and fastened with the included screw.

## Wall collar

Wall collars are used when the cable trunking needs to pass through a wall, for example.

## Cable trunking base Instal® 100

(M) (B) (AD)

**MEKA**  
Instal®

Universal one-section aluminium trunkings INSTAL 100 are used for installing 80 mm sockets and fixtures of different manufacturers - directly or by using mounting boxes BASIC MB. To extend trunkings joints INSTAL J can be used. The cross-section area of INSTAL 100 is 5700 mm<sup>2</sup>.

Product set includes trunking base, covers INSTAL K80 shall be ordered separately. Visible surfaces of trunkings are covered with protective film, which is removed after installation.

## Cover Instal® K

M B AD

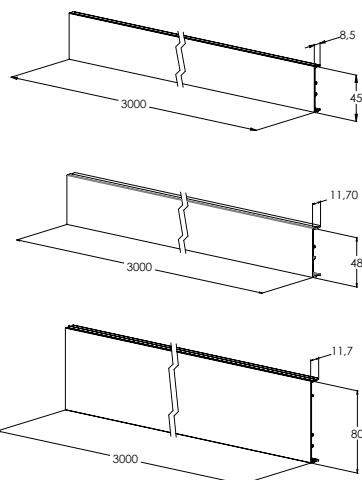

Cable trunking covers INSTAL K guarantee safety and protect cables from damage, dirt and UV radiation as well as finish the installation. Covers are coated with protective film, which is removed after installation.

Compatibility of covers and trunkings:

Covers K45 - cable trunking bases INSTAL 108-45, INSTAL 144-2-45 and INSTAL 170-2-45

Covers K80 - cable trunking bases INSTAL 100, INSTAL 108, INSTAL 130, INSTAL 144, INSTAL 170 series and INSTAL 210-2.

Cable trunking covers lock in place when pressed on the fixture opening.

## Joint Instal® J

PG

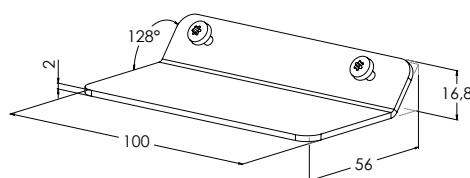

Joints INSTAL J are used to extend INSTAL cable trunkings. Joints have fixing bolts already at place that make installation quick and convenient. Correctly installed joints create a sufficient electrical conductivity which eliminates the need to install a separate grounding wire between cable trunkings. For one connection two joints are needed.

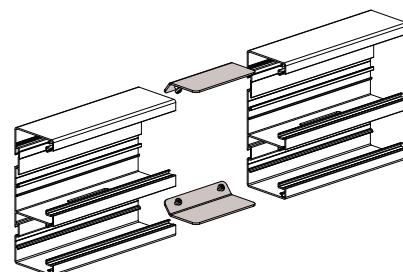

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
------	------------------------------	-----------------	---------

1429769	X INSTAL J	0.098	10 PCE / 1 BG
---------	------------	-------	---------------

PG Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 : C1-C2

Joints are installed to grooves inside cable trunking base and locked by included screws.

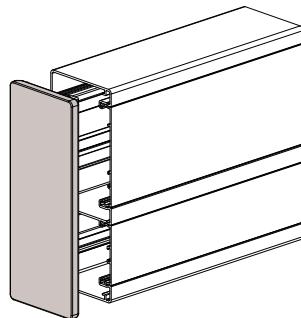

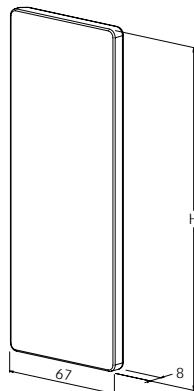

# End plate Instal® P

M B AD

**MEKA®**  
**Instal**

End plates INSTAL P are used to finish the installation and cover ends of cable trunkings. Mounting is quick and convenient - suitable end caps can be pushed into the ends of the cable trunkings by hand.

End plates are installed by pressing them on the cable trunking.

AD Anodized aluminium : C1-C2

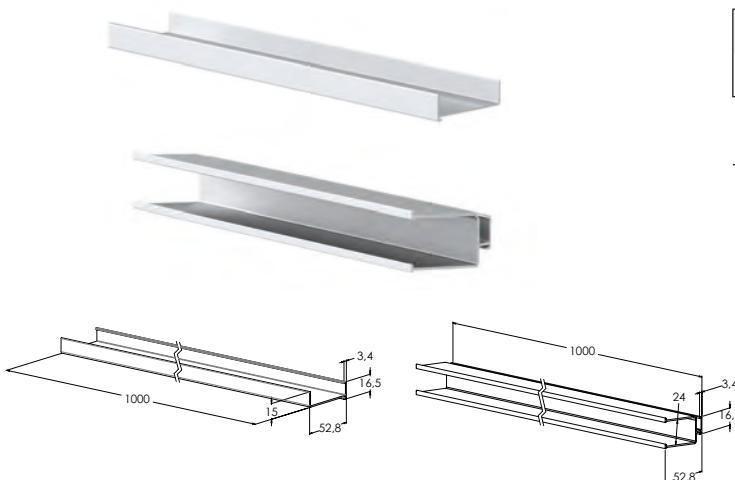

Cable trunking base is pushed inside the corner piece, after which it can be extended with another cable trunking base from the other side of the cornerpiece.

## Cable shelf Instal® VS

AL

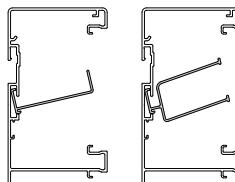

**MEKA**  
Instal®

Cable shelves INSTAL VS are used to separate cables inside of cable trunkings. Cable shelves are placed into grooves on the back wall of cable trunkings without using tools. INSTAL VS cable shelves are made of aluminium and the length of shelves is 1 meter.

CODE	PRODUCT <small>x = stock product</small>	WGT. kg / pc	PACKAGE
1429543	X INSTAL VS L=1000 M PW	0.3	12 PCE / 12 MTR
1429544	X INSTAL VS2 L=1000 M PW	0.51	12 PCE / 12 MTR

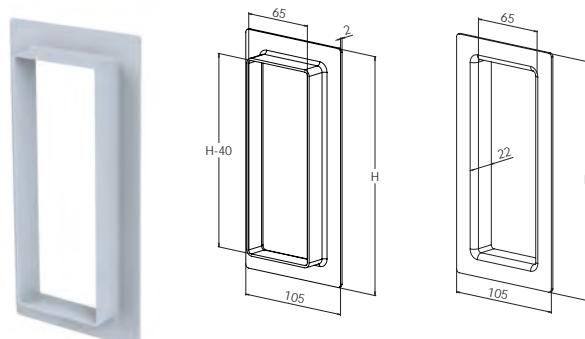

AL Manufactured of extruded aluminium alloy : C1-C2

Cable shelves are installed by locking them to the cable trunking base's groove as shown in the image.

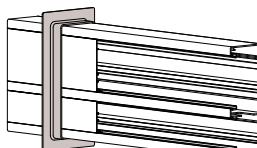

## Wall collar Instal® LVK

Wall collars INSTAL LVK are used when cable trunkings can be neatly led through wall between rooms. Collars are selected according to the size of cable trunkings and they cover about 20 mm wide area around trunkings.

CODE	PRODUCT <small>x = stock product</small>	WGT. kg / pc	H mm	PACKAGE

1429745	X INSTAL LVK 210	0.059	250	10 PCE / 1 BG

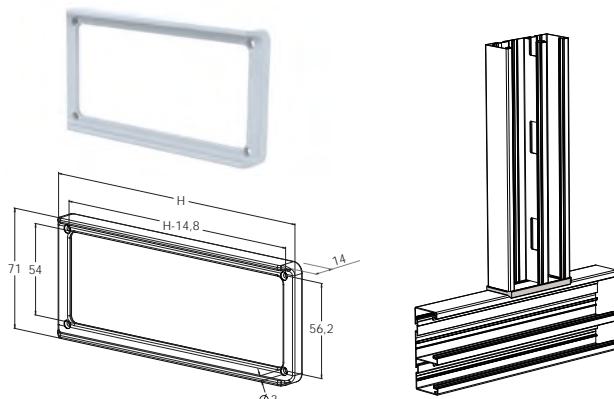

White plastic : C1

Wall collars are used when the cable trunking needs to pass through a wall, for example.

## Trunking collar Instal® LK

Trunking collars INSTAL LK are used when cable trunkings have to be installed upright onto another. Collars guarantee better appearance of jointing and avoid scratches. Collars LK can be fixed at the ends of vertically placed trunkings with screws, on horizontal trunkings the fastening of collars are not needed.

## Wall bracket Instal® SK

AL

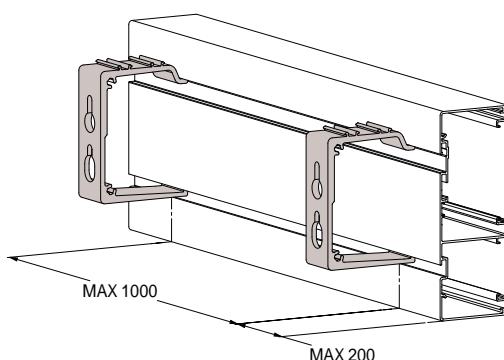

Wall brackets INSTAL SK are used for mounting INSTAL-type cable trunkings (excluding INSTAL 100 and INSTAL 108) to wall. Depending on selected wall bracket type the distance between trunkings and wall could be 20-125 mm. To cover gaps between cable trunkings and wall decorative ribs INSTAL PS are recommended to use.

Cable trunkings can be fastened to wall supports without tools by pressing trunkings to grooves on supports.

CODE	PRODUCT x = stock product	WGT. kg / pc	H mm	PACKAGE
1429761	x INSTAL SK 20	0.071	25	10 PCE / 1 BG
1429762	x INSTAL SK 40	0.09	45	10 PCE / 1 BG

1429765	x INSTAL SK 125	0.19	130	10 PCE / 1 BG

AL Manufactured of extruded aluminium alloy : C1-C2

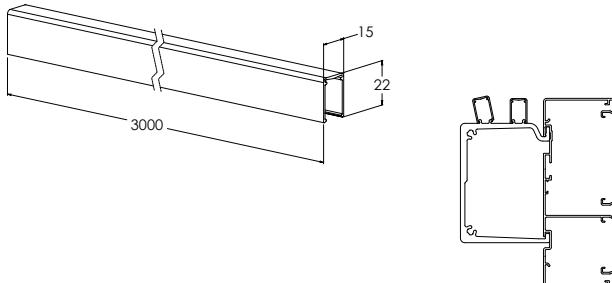

The cable trunking base is suspended on the wall bracket's hooks from the grooves in cable trunking base.

## Decorative rib Instal® PS

Decorative ribs INSTAL PS are used to cover gap between cable trunkings and wall. Ribs are installed on top of wall supports and fixed without tools into grooves on wall supports. To keep ends of decorative ribs on the line joints INSTAL PSJ are recommended to use.

INSTAL PS decorative ribs can be used together with wall supports INSTAL SK 40, SK 75, SK 100 and SK 125.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1429595	x INSTAL PS L=3000 M PW	0.57	10 PCE / 30 MTR

1429670	x INSTAL PS L=3000 AD	0.55	10 PCE / 30 MTR
AD	Anodized aluminium : C1-C2		

Decorative ribs are used to close the gap between the cable trunking and wall without blocking air flow.

## Joint Instal® PSJ

Joints INSTAL PSJ are used to extend INSTAL PS decorative ribs. Joints PSJ keep ends of decorative ribs on the line and can be installed without tools.

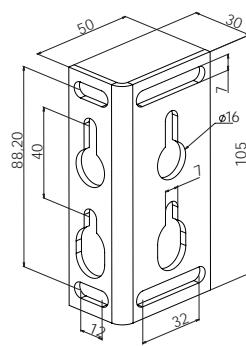

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1429771	x INSTAL PSJ	0.001	10 PCE / 1 BG
PG	Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 : C1-C2		

## Adjusting piece Instal® SL2

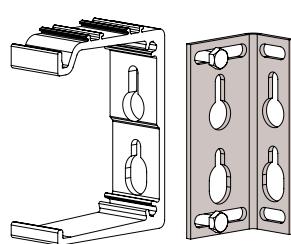

Adjusting pieces INSTAL SL2 are used together with wall brackets SK in cases when wall surfaces are not straight enough. The adjustment range when using INSTAL SP2 is 3-34 mm.

Product set includes bolts for fastening adjusting pieces to wall brackets.

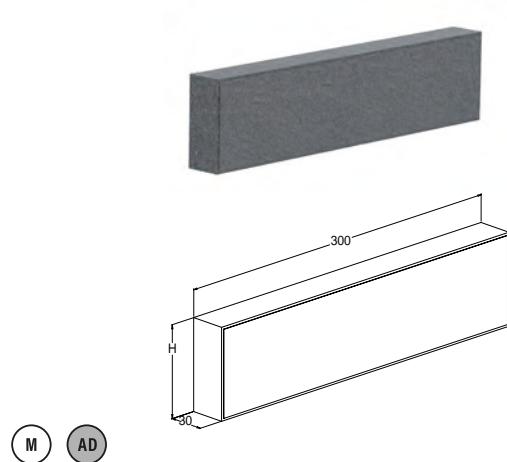

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1429528	x INSTAL SL2	0.14	10 PCE / 1 BG
PG	Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 : C1-C2		

Adjusting piece is installed to the wall bracket as shown in the image. Adjusting range 3-34 mm.

## Sound isolation piece Instal® LIS

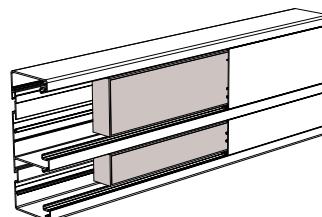

Sound isolation pieces INSTAL LIS are used inside of cable trunking to avoid noise transfer between rooms. Isolation pieces have sticker at place for pasting these inside of trunkings' covers.

M AD

CODE	PRODUCT x = stock product	WGT. kg / pcl	H mm	PACKAGE
1429300	x INSTAL LIS-48	0.33	40	1 PCE
1429301	x INSTAL LIS-80	0.6	72	1 PCE

Grey plastic : C1

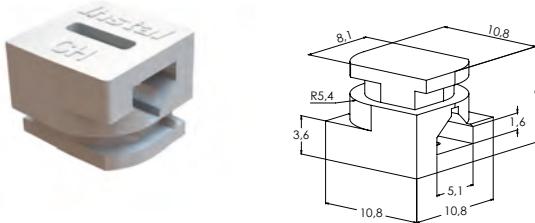

Sound isolation pieces are installed inside the cable trunking under the cover.

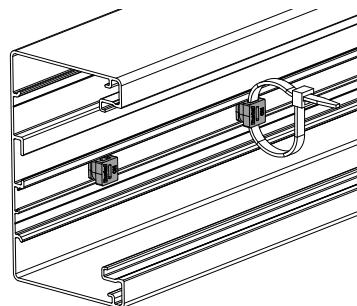

## Cable tie clamp Instal® CH

Plastic cable tie clamps INSTAL CH are used for fixing cables inside of INSTAL cable trunkings. Clamps INSTAL CH are installed in groove in back wall of trunkings and fixed by turning 90°. Suitable are max. 5 mm width cable ties that shall be ordered separately.

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1429451	INSTAL CH	0.001	100 PCE / 1 BG

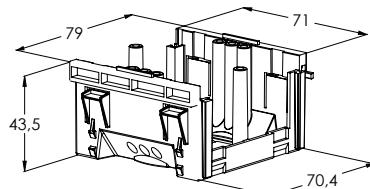

The cable tie clamp is inserted into the interior groove of the cable trunking's base and locked in place by twisting it 90°. Maximum width of cable tie is 5 mm.

## Mounting box Basic MB

Mounting boxes MB are used for installing sockets and other fixtures into Instal® cable trunkings. If it is necessary to install several sockets next to each other, the mounting boxes can be easily connected together. For pull protection of cables, BASIC EC end caps are recommended to use at the ends of boxes.

There is ~15-20 mm free space for cables and wires under the installed mounting box.

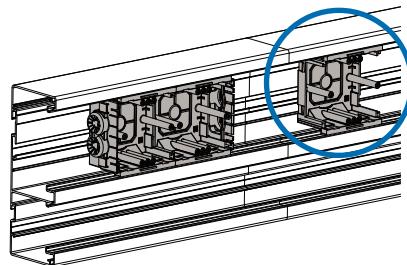

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1433240	x BASIC MB	0.032	10 PCE / 1 BG

White plastic : C1

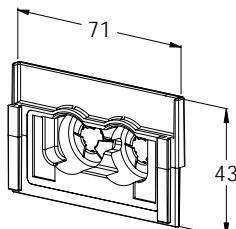

Please note!  
Socket compatibility with  
Basic MB mounting box  
must be verified.

The mounting box is pressed into the 80mm opening of the trunking and snapped in place, allowing the mounting box to slide parallel to the trunking's body. There is a 15-20 mm cable space between the trunking body's bottom and the mounting box.

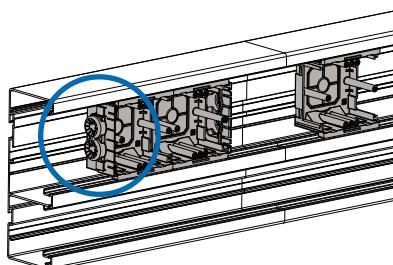

## End caps with strain relieves Basic EC

End caps BASIC EC with strain relief are used for routing and fixing cables on Basic MB mounting boxes or at ends of mounting boxes sets. Sales unit of BASIC EC is package that includes 20 pieces of end caps.

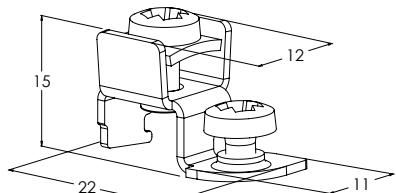

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1433241	x BASIC EC	0.009	20 PCE / 1 BG

White plastic : C1

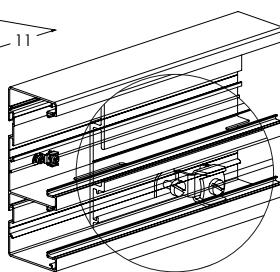

## Earthing coupler Instal® ML

Earthing couplers ML are used for earthing of cable trunkings and covers. Earthing couplers have to press into the cover's or trunking's coupler groove, twist into place and lock with a screw. Maximum two 4 mm<sup>2</sup> copper wires can be connected to one earthing coupler.

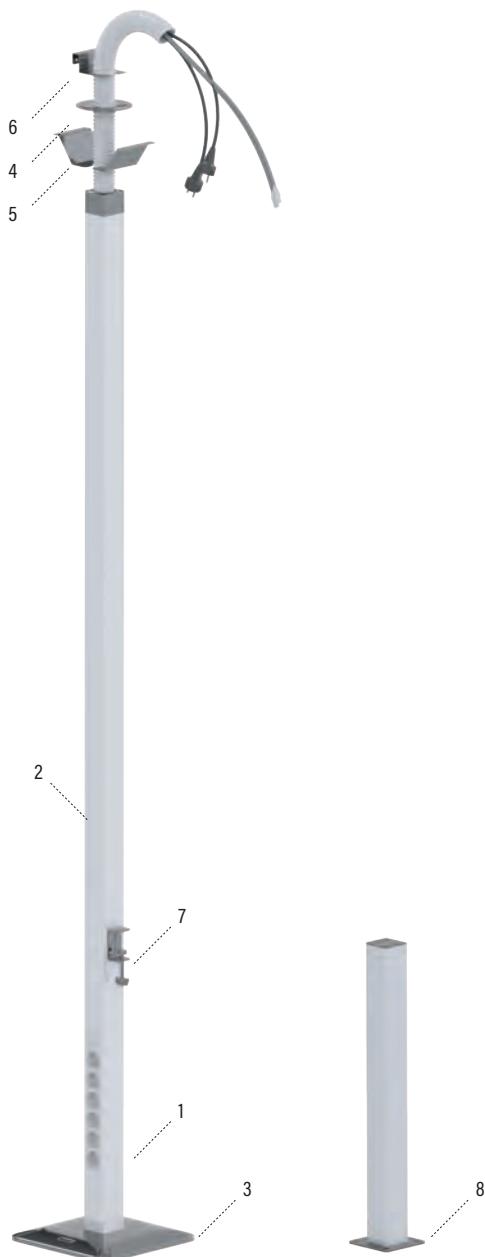

CODE	PRODUCT x = stock product	WGT. kg / pc	PACKAGE
1429276	x INSTAL ML	0.007	100 PCE / 1 BG

PG Manufactured of hot-dip galvanized steel in accordance with standard EN 10346 : C1-C2

The earthing coupler is installed to the groove inside the cable trunking base and fastened with the included screw.

## Ceiling frame Instal® MB1

Ceiling frames INSTAL SP45 MB1 are used for fastening flexible conduits of socket poles to suspended ceiling.

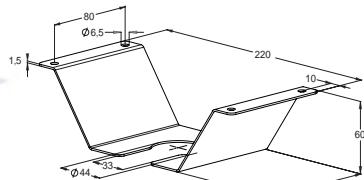

Diameter of frame is 125 mm and there are three  $\varnothing$  5 mm holes for fixing frames to ceiling. Product set includes disc and semi-arc piece. During installation the disc is fastened from below and the flexible conduit is fixed by using the semi-arc part from the other side of surface.

CODE	PRODUCT x = stock product	WGT. kg / pc	MATERIAL	PACKAGE
1431921	INSTAL SP45 MB1	0.17	Steel	1 PCE
M	White paint : C1-C2			

## Ceiling bracket Instal® MB2

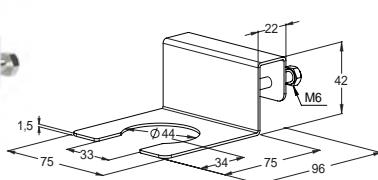

Ceiling brackets INSTAL SP45 MB2 are used for fastening flexible conduits of socket poles to ceiling. Flexible conduits are fixed into  $\varnothing$  44 mm hole in brackets by pressing conduits to brackets from side.

CODE	PRODUCT x = stock product	WGT. kg / pc	MATERIAL	PACKAGE
1431922	INSTAL SP45 MB2	0.3	Steel	1 PCE
M	White paint : C1-C2			

## Flexible conduit bracket Instal® MB3

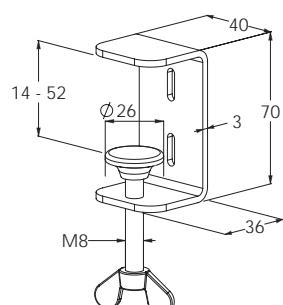

Flexible conduit brackets INSTAL SP45 MB3 are used for fastening flexible conduits to cable trays, lighting support rails and cable ladders. Flexible conduits are fixed into  $\varnothing$  44 mm hole in brackets by pressing conduits to brackets from side. Brackets MB3 have two M6 bolts for fastening to trays already at place.

CODE	PRODUCT x = stock product	WGT. kg / pc	MATERIAL	PACKAGE
1431923	INSTAL SP45 MB3	0.13	Steel	1 PCE
M	White paint : C1-C2			

## Table bracket Instal® TB

Brackets INSTAL SP45 TB are used for fastening socket- and feeder poles to tables and other plates. The thickness of surfaces could be from 14 to 52 mm. For fixing brackets to poles two M3 bolts and nuts, for instance, are recommended to use.

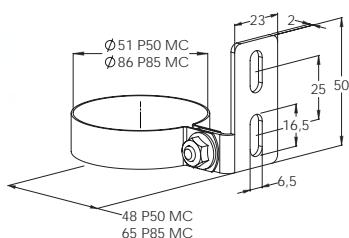

CODE	PRODUCT x = stock product	WGT. kg / pc	MATERIAL	PACKAGE
1431924	INSTAL SP45 TB	0.17	Steel	1 PCE
M	White paint : C1-C2			

## Mounting Clamp Instal® MC

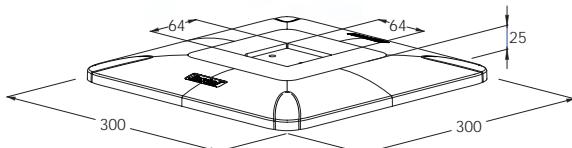

Mounting clamps INSTAL SP MC are used for fastening INSTAL SP P feeder poles to walls or other surfaces. Product set includes collar and fastening plate.
